We studied the effects of autologous erythrocyte infusion on blood volume and thermoregulation during exercise in the heat. Using a double blind design, nine unacclimated male subjects were infused with either 700 ml of a NaC1 glucose-phosphate solution containing a approx. 60% hematocrit (n=6, reinfusion) or 700 ml of this solution only (n=3, saline). A heat stress test (HST) was attempted approximately 2 wk pre-and 48 h post-infusion during the late spring months. After 30 min of rest in a 20 C antechamber, the HST consisted of a 120-min exposure (two repeats of 15-min rest and 45-min treadmill walking) in a hot (35c, 45% rh) environment while euhydrated. Red cell volume (RCV, 51 CR) and plasma volume (PV, 125I) were measured 24-h before each HST, and maximal oxygen uptake (VO2 max) was measured 24-h after each HST. Generally, no significant effects were found for the saline group. For the reinfusion group, RCV (11%, $P<0.01$) and V02 max (11%, $P<0.05$) increased after infusion, and the following observations were made: (1) the increased RCV was associated with a reduction in PV to maintain the same blood volume as during the preinfusion measurements; (2) erythrocythemia reduced total circulating protein, but did not alter F-cell ratio, plasma osmolality, plasma protein content, or plasma lactate at rest or during exercise-heat stress; (3) erythrocythemia did not change the volume of fluid entering the intravascular space from rest to exercise-heat stress. URINARY AND HEMATOLOGICAL INDICES OF HYPOHYDRATION
R. P. FRANCESCONI, R. W. HUBBARD, P. C. SZLYK, D. SCHNAKENBERG, and D. CARLSON 1986 22 p
(AD-A165015; USARIEM-M-15/86) Avail: NTIS HC A02/MF A01 CSCL 06S

As part of a large scale field feeding system test we had the unique opportunity to collect and study hundreds of overnight urine aliquots which were obtained immediately prior to a fasting blood sample on days 1, 20, and 44 of the field test. To evaluate the hydrational status of test subjects and criteria of hypohydration, urine aliquots were categorized by specific gravity $>$ or $=$ 1.03 ($n=124$) or $<$ 1.03 ($n=540$). Creatinine levels were elevated ($p<.001$) in the concentrated urine samples, but a decreased trend in Na(+)/K(+) ratios in these samples failed to achieve statistical significance ($p=0.1$). However, when individuals with high specific gravity urine were further subclassified by a criterion of weight loss $>$ 3% from original body weight, then creatinine concentrations were elevated ($p=.05$) while Na(+)/K(+) ratios were decreased ($p=.05$) when compared with levels in subjects also with high specific gravity but weight loss $<$ 3%. Serum urea nitrogen/creatinine ratios were significantly increased (days 1 and 44, $p=.02$) in test subjects whose urine samples exceeded 1.03 in specific gravity. The results of this study indicated that prodromal hypohydration, indicated by concomitant elevations in urinary specific gravity and creatinine, was not reflected in the common indices of circulatory hypohydration- hematocrit and osmolality. Alternatively, urea nitrogen/creatinine ratio may be a sensitive circulatory index of imminent hypohydration. GRA

FACTORS INFLUENCING CARBOXYHEMOGLOBIN STABILITY Final Report, 1983 - 1984
G. M. GOLDSTEIN, L. RAGGIO, and D. HOUSE 26 Mar. 1985 39 p Prepared in cooperation with Rockwell International Corp., Chapel Hill, N.C.
(AD-A165032; TR-1811) Avail: NTIS HC A03/MF A01 CSCL 06A

Carbon monoxide (CO) is a byproduct of the incomplete combustion of hydrocarbons. Because of its high affinity for oxygen binding sites on hemoglobin and displacing oxygen, the presence of CO in the atmosphere has been shown to produce adverse health effects, affecting the cardiovascular system as well as causing behavioral changes. These changes have been reported at concentrations of carboxyhemoglobin (COHB) in the range of 4 to 6%. The Department of Defense (DOD) is concerned about the production of CO in fixed and mobile weapon systems and the relationship between behavior and health effects in military personnel associated with this exposure. The source of CO in a combat situation is exhaust gases from motorized vehicles and propellant gases from weapon systems. Studies were conducted to determine the stability of carboxyhemoglobin (COHb) in evacuated blood containers using the IL-282 co-oximeter as the measurement instrument. This study has shown that COHb levels decrease by 5 to 10% of the original value after three days of storage and remain stable for 14 days at 4 C or 21 C in vacutainers containing heparin or EDTA. The storage temperature, 4 C or 21 C had no appreciable affect on COHb levels. Blood samples that contained the anticoagulant heparin had higher initial values of COHb than samples with EDTA. In this study ambient room light

levels did not affect the measured levels of COHb at 4C for 5 days. GRA

EFFECTS OF ATROPINE SULFATE ON AIRCREW PERFORMANCE Final Report, Mar. 1983 - Apr. 1985
M. L. LOBB, J. D. PHILLIPS, JR., and A. S. WINTER Dec. 1985 16 p
(Contract F33615-83-K-0611)
(AD-A165063; USAFSAM-TR-85-48) Avail: NTIS HC A02/MF A01 CSCL 06O

The human/animal literature on performance effects of atropine sulfate is reviewed and extrapolated to aircrew requirements. Subjective reports and physiological dose-response curves are used to estimate effective dosage levels for performance; ED50 is the dose at which 50% of an aircrew experiences a detectable performance change. Based on this review and extrapolation, the ED40 level for atropine sulfate is 2 mg IM/person for performance effects on near vision, alertness, equilibrium, response-force discrimination, and enunciation: the ED5 level is estimated at 1.35 mg IM/person. Although the published literature on simultaneously administered acetylcholinesterase inhibitors and blockers is insufficient to warrant even a tentative conclusion, the initial results suggest a combined mode of action in the visual system; if confirmed, such action would limit the use of atropine to counteract chemical-warfare performance decrements. Thus although atropine may be lifesaving, it does not prevent aircrew performance losses due to chemical-warfare agents and may impose additional decrements. GRA

THE STRESS SYNDROME
F. SANDERS and J. ETHELL Cockpit (ISSN 0742-1508), Jan.-Mar. 1986, p. 5-11.

The effects of extended acute stress on the performance of pilots are analyzed. The symptoms of stress which include reduced cognitive capability, failure to perceive passage of time, personality change, tunnel vision, detachment from the situation, and uncontrolled shaking are described. The influence of stress-induced endorphin on the synaptic gap function of the brain is studied. Methods of relieving or 'preburning' stress are examined. The need for self-monitoring of stress is discussed. I.F.

DRIVING PERFORMANCE THE DAY AFTER USE OF LOPRAZOLAM, FLUNITRAZEPEM AND PLACEBO
E. R. VOLKERTS, G. DEVRIES, T. MEIJER, and J. F. OHANLON Jun. 1984 66 p Revised Sponsored in part by Netherlands' Ministerie van Onderwijs en Weitenschappen and Roussel-UCLAF, France
(VK-83-04; ISBN-90-6807-005-3; B8561714; ISSN-0167-8590; ESA-86-96948) Avail: Issuing Activity

In order to determine if loprazolam, a mild hypnotic drug, has residual effects on driving performance and if a dose-effect relationship exists, 16 female subjects performed a driving test in 1 of 4 conditions. Loprazolam was administered in doses of 1 mg and 2 mg in conditions 1 and 2; flunitrazepam in a dose of 2 mg was administered as the active drug control in the third condition; and a placebo was given in the fourth condition. Nightly doses of loprazolam 1 mg and flunitrazepam 2 mg can slightly degrade driving performance the following day, but the degree of impairment seems insufficient to preclude the drugs' use by drivers. Nightly doses of loprazolam 2 mg can seriously degrade driving performance for up to 17 hours and this dose is not recommended for use by drivers. ESA

THE EFFECTS OF THE ANTIDEPRESSANTS OXAPROTILINE, MIANSERIN, AMITRYPTILINE AND DOXEPIN UPON ACTUAL DRIVING PERFORMANCE
J. W. LOUWERENS, K. A. BROOKHUIS, and J. F. OHANLON Jun. 1984 77 p Sponsored in part by Netherlands' Ministerie van Onderwijs en Wetenschapsbeleid and Ciba-Geigy AG, Basle, Switzerland
(VK-83-05; ISBN-90-6807-006-1; B8561711; ISSN-0167-8590; ESA-86-96949) Avail: Issuing Activity

The effects of antidepressants and a placebo were compared using a driving test. Five treatments were administered to 20 healthy young male volunteers on separate days, spaced at least 5 days apart. These were: oxaprotiline, amitryptiline and doxepin 75 mg (25 mg tid); mianserin 30 mg (10 mg tid); and placebo. Doses of each drug and placebo were administered 10, 6, and 2 hours before tests. Oxaprotiline is generally without adverse acute effects upon driving performance, but may produce either impairment or improvement in particular individuals. Amitryptiline, mianserin and doxepin, in that order, have adverse acute effects on driving performance. Individuals suffering impairment as a consequence of antidepressants' acute effects can recognize the implications for driving safety and cease driving, while others cannot, and continue driving with progressively deteriorating performance until their safety is seriously compromised. ESA

COMPONENTS OF VERBAL INTELLIGENCE Final Report, 1 Oct. 1982 - 30 Sep. 1985
R. J. STERNBERG 30 Dec. 1985 47 p
(Contract N00014-83-K-0013)
(AD-A163359) Avail: NTIS HC A03/MF A01 CSCL 05J

This project develops and tests a theory of the components of verbal intelligence. Alternative theoretical frameworks for understanding verbal intelligence are reviewed, and then a componential theory of verbal comprehension is proposed. The theory specifies the information-processing components, context cues, and mediating variables underlying acquisition of word meanings from context. A number of experiments testing and supporting the theory are described, including experiments involving both internal and external context. Instructional experiments are also described, and it is concluded that the theory is well supported by the data, and moreover, that it can serve as a useful basis for training people in how to learn meanings of words from context. The theory is extended to novel kinds of concepts as well, and it is shown that the learning of novel concepts involves an interaction between linguistic and conceptual unfamiliarity. In a series of

experiments on causal inference involving verbal versus symbolic-abstract materials, it is shown that although a core of logical operations is applied to both verbal and abstract materials, special processes are involved when people reason about meaningful verbal materials. GRA

ACQUIRING PROCEDURAL SKILLS FROM LESSON SEQUENCES Final Report, 1 Jan. 1982 - 15 Jun. 1985
K. A. VANLEHN 13 Aug. 1985 53 p
(Contract N00014-82-C-0067)
(AD-A164580; ISL-9) Avail: NTIS HC A04/MF A01 CSCL 05J

This report provides an informal overview of a theory that describes how people learn certain procedural skills, such as arithmetic and algebra, from multi-lesson curricula. The central hypothesis is that students and teachers obey conventions that cause the goal hierarchy of the acquired procedure to be a particular structural function of the sequential ordering of lessons. This learning theory is an extension of Repair Theory, which describes how people mix interpretation and a certain type of meta-level problem solving as they try to solve practice problems. The learning theory has been embedded in a program that generates detailed predictions about the products of published curricula. The predictions have been tested against data from several thousand mathematics students. GRA

CHANGES IN NAVAL AVIATION BASIC INSTRUMENT FLIGHT TRAINING: AN ANALYSIS M.S. Thesis
J. Y. WALLACE, III Dec. 1985 108 p
(AD-A164738) Avail: NTIS HC A06/MF A01 CSCL 05I

This thesis evaluates a modification to the Navy's Basic Instrument flight instruction, the performance of two groups of student aviators was compared. The modifications consisted of a lecture concentrating on the fundamentals of attitude instrument flight. One group of 100 students received the new training while a control group of 100 students did not. Analysis of the flight grades of the two groups revealed no significant difference in their performance. Based on the results of this research it was concluded that the modified basic instrument training did not improve the performance of student naval aviators. However, the modified lecture and training did improve the student's understanding of basic instrument fundamentals. The study recommended that the modified lecture should be continued as part of the syllabus because the benefits from affording the student aviators with additional training exceed the small costs involved. ign, Flight skills acquisition. INTERACTION OF IMAGE CHARACTERISTICS OF STEREOSCOPIC FORMS DURING DEPTH PERCEPTION Final Report, 1 Oct. 1980 - 30 Jun. 1984
R. FOX Aug. 1985 35 p refs
(Contract N00014-81-C-0001)
(AD-A164895; N14-0001-85C-0001) Avail: NTIS HC A03/MF A01 CSCL 06P

The primary objective of this research program was to determine the degree of congruence between the apparent or perceived depth position of a stereoscopic form and the position predictable from the physical conditions of stimulation. This topic, which bears directly on the veridicality or validity of depth information presented in a stereoscopic or 3-d display, has been investigated previously under restricted laboratory conditions that yield results of limited generality. For that reason, the present inquiry was pursued under naturalistic conditions similar to those that would obtain during the routine operation of visual displays. To gain insights into potential interactions between depth position (X-axis) and stimulus configuration (X- and Y-axes), stereoscopic forms were created from dynamic random element stereograms continuously generated electronically. This approach precluded the occurrence of non-stereoscopic cues that can arise in conventional depth displays. GRA

THE HEALTHY MOTIVATION TO FLY: NO PSYCHIATRIC DIAGNOSIS Final Report, 1 Jul. - 31 Aug. 1985
R. R. ADAMS and D. R. JONES Nov. 1985 15 p refs
(AD-A164944; USAFSAM-TR-85-77) Avail: NTIS HC A02/MF A01 CSCL 05J

Aircrew mission effectiveness may uniquely be influenced by subtle psychological factors, not ordinarily brought to the attention of psychiatrists. Pilots tend to be bright, articulate, and anxious to resume their aviation duties when grounded. However, these patients are usually well defended, and rarely psychologically attuned or introspective. Greater insight into what constitutes the normal, healthy motivation to fly will help those who make judgements regarding the return of grounded aviators to flying duty. A review of associated birth order, personality theory, industrial and business psychology, aerospace, and psychoanalytic literature is presented. Highlighted are the difficulties inherent in examining the motivation of a healthy, well-defended population. Our conclusion: an examiner's countertransferential feelings are the best available tool for measurement of healthy motivation. GRA

THE ROLE OF ELABORATIONS IN INSTRUCTIONAL TEXTS: LEARNING TO USE THE APPROPRIATE PROCEDURE AT THE APPROPRIATE TIME Technical Report, Jan. - Oct. 1985
D. H. CHARNEY 14 Feb. 1986 85 p
(Contract N00014-84-K-0063; NR PROJ. RR0-4206)
(AD-A165211; TR-86-2-ONR) Avail: NTIS HC A05/MF A01 CSCL 05I

This research investigates the kinds of information that should be included in instructional texts that teach skills (such as manuals or textbooks). It focuses on an important subcomponent of skill learning: choosing the right procedure at the right time. Learning to choose the right procedure is difficult in skills such as using a computer because the connection between real-world goals and the generic procedures described in a manual is often obscure. Furthermore, when several procedures have similar functions, it is difficult to tell which one is best for a particular situation. In order to facilitate the decision process, instructional tests may include advice about when to use particular procedures and may illustrate the advice with examples. The research reported here investigated the effect of various forms of advice on learners' strategies for choosing a procedure. Subjects read one of four versions of a manual for a computer game called Box-World. Three versions contained advice about when to use particular game procedures; the advice was either stated as a simple verbal rule or elaborated with one of two types of examples. The fourth version contained no advice. Subjects then performed three tasks: a recall task, a recognition task (i.e., discriminating between correct and incorrect applications of the advice), and a decision task (i.e., solving problems for which the advice was relevant). FLURAZEPAM HCL'S RESIDUAL (HANGOVER) EFFECTS UPON ACTUAL DRIVING PERFORMANCE
J. F. OHANLON, E. R. VOLKERTS, G. DEVRIES, A. VANARKEL, M. WIETHOFF, and T. MEIJER Nov. 1984 58 p Revised
Sponsored in part by Netherlands' Ministerie van Onderwijs en Wetenschapsbeleid and F. Hoffmann-La Roche and Co., Ltd., Basle, Switzerland
(VK-83-02; B8462753; ISBN-90-353-0030-0; ISSN-0167-8590; ESA-86-96947) Avail: NTIS HC A04/MF A01

The effects on driver performance of taking a hypnotic drug (flurazepam HCL) were assessed on 40 female subjects aged between 25 and 40. An acute experiment wherein a larger group's performance was assessed following 2 nights of drug or placebo treatment; and a subchronic experiment wherein a smaller group's performance was assessed, before, during and after 8 consecutive nights of treatment with flurazepam 30 mg were conducted. Flurazepam doses of 15 mg and 30 mg were administered in different treatment conditions of the acute experiment. Secobarbital

200 mg was administered in another condition as the active drug control, and a placebo was administered in the final condition. Flurazepam 30 mg impairs driving performance for at least 17 hours following drug intake. Flurazepam's residual effect is dose-dependent. Serious impairment can occur. ESA

A MODEL AND EXPERIMENTAL ANALYSIS OF PILOT DECISION MAKING BEHAVIOR FOR VARIOUS AUTOMATIC APPROACH CONDITIONS
R. C. VANDEGRAAF and P. H. WEWERINKE 5 Apr. 1984 48 p
(Contract NIVR-1857; BMFT-0101-ZA/WF/WRD-174/4)
(NLR-TR-84037-U; ESA-86-96980) Avail: NTIS HC A03/MF A01

Four experienced airline pilots monitored stabilized automatic approaches in a flight simulator, to assess a failure detection model. The tasks comprised the detection of excessive longitudinal and lateral windshears, and of system failures on the glideslope and localizer indicators. Two failure probability conditions were included to investigate the effect of the subject's failure expectancy on the detection performance. Good agreement between the model predictions and the experimental results of two subjects is obtained. The failure detection times of the two other subjects are larger, especially for the windshear conditions, due to a more conservative detection strategy. Results indicate the usefulness of an analytical capability for investigating relative effects of aircraft design parameters, such as display integrity, configuration, and format on failure detection performance. PSYCHOEMOTIONAL PILOT STRESS PRIOR TO EJECTION AND ITS ROLE IN APPROPRIATE PERFORMANCE
A. P. KOZLOVSKIY and A. F. KOVALENKO *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 19-24 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 16-19 Avail: NTIS HC A08

It was demonstrated that with respect to the psychoemotional state real and simulated catapulting events were similar. The time-course variations in the latent period of the motor reaction were obtained. The time interval between the command Go and the catapulting event was found to increase significantly in relation to the latent period. This was correlated with the level of psychoemotional strain. The effect of rhythmic light flashes on the space-time pattern of brain biopotentials during motor functions and biomechanical efficiency of man's actions was investigated. As the motor model, the ability to maintain equilibrium when standing on the toes of one foot was used. Electroencephalography (EEG) from 12 neocortical areas and oscillations of the body mass center (stabilography) were recorded in 20 men who performed the exercise under normal conditions and during light flashes of 12 Hz. The resultant EEG and stabilograms were exposed to correlations-spectral and coherent analysis with the aid of an EC-1035 computer. Light flashes induced a change in the EEG peaks and flicker fusion frequency, a significant increase of the density of biopotentials corresponding to the light stimulation frequency, and a redistribution of the number of high intercentral correlations between neocoretical motor centers. When the light flashes were presented, 75 to 85% of the test subjects showed a 0.19 to 0.26 increase in the biopotential coherence of the premotor, motor and sensomotor areas. They also exhibited a significant decrease in the body stability and an increase in the stabilographic amplitude and frequency. It is suggested that the decline of biomechanical efficiency is associated with the disorders of the space-time integration between neocortical centers involved in the motor control system that are responsible for the execution of motor acts. ANALYTICAL TECHNIQUES OF PILOT SCANNING BEHAVIOR AND THEIR APPLICATION
R. L. HARRIS, SR., B. J. GLOVER (PRC Kentron, Inc., Hampton, Va.), and A. A. SPADY, JR. Jul. 1986 46 p refs
(NASA-TP-2525; L-15995; NAS 1.60:2525) Avail: NTIS HC A03/MF A01 CSCL 05I

The state of the art of oculometric data analysis techniques and their applications in certain research areas such as pilot workload, information transfer provided by various display formats, crew role in automated systems, and pilot training are documented. These analytical techniques produce the following data: real-time viewing of the pilot's scanning behavior, average dwell times, dwell percentages, instrument transition paths, dwell histograms, and entropy rate measures. These types of data are discussed, and overviews of the experimental setup, data analysis techniques, and software are presented. A glossary of terms frequently used in pilot scanning behavior and a bibliography of reports on related research sponsored by NASA Langley Research Center are also presented. Author

US AIR FORCE COMBAT PSYCHIATRY Final Report, Jan. 1979 - Jun. 1985
D. R. JONES Jan. 1986 44 p
(AD-A165011; USAFSAM-TR-85-83) Avail: NTIS HC A03/MF A01 CSCL 05J

The U.S. Air Force faces the distinct possibility that its bases may be vulnerable to enemy attack. Combat fatigue may thus affect nonfliers, whereas in past conflicts fliers have been the ones affected. This report reviews the literature on the effects of combat: first on fliers, then on nonfliers. The report suggests that flight surgeons use 2 main agents of therapy, rest and the force of their personality, to delay or prevent combat fatigue in fliers. The report also discusses the relevant signs and symptoms, both in fliers and in nonfliers, and ends with a presentation of the principles of Brevity, Immediacy, Centrality, Expectancy, Proximity, and Similicity in dealing with combat fatigue in nonfliers. INITIAL SKILL LEARNING: AN ANALYSIS OF HOW ELABORATIONS FACILITATE THE THREE COMPONENTS Technical Report, Oct. 1984 - Feb. 1986
D. H. CHARNEY and L. M. REDER 14 Feb. 1986 57 p
(Contract N00014-84-K-0063)
(AD-A165137; TR-86-1-ONR) Avail: NTIS HC A04/MF A01 CSCL 05J

This paper is concerned with the issue of how verbal instructions influence skill learning. In particular, our goal is to outline the components of initial cognitive skill acquisition and analyze what features of elaborations in the instructional materials can facilitate each component. We identify three basic components of skill learning: learning novel concepts and the functionality of novel concepts and procedures; learning how to execute the procedures; and learning the conditions under which the procedures can and should be applied. Each of these components can be learned independently and each component can be a bottleneck to acquiring a skill. Situation examples are the most useful type of elaboration for skill learning because each example can contribute to learning in all three components. On the other hand, while

analogies can be constructed to illustrate each component, they are more likely to help people learn the functionality of a procedure than how to execute it or when to select it. However, since learners tend to rely on examples as models, it is very important to choose examples with great care and to provide enough examples to illustrate the range of application of a rule or procedure. Otherwise, learners may interpret a rule incorrectly or make spurious assumptions about the conditions under which it applies. GRA

Program activities directed towards the development of a system engineering concept for the design of the man-machine interface are summarized. The problem was approached from an operational and human task point of view. The first phase included the development of: (1) a mission task list for selected mission and weapon systems; (2) a method for rating the relative importance of each of the tasks related (a) to the frequency of occurrence, (b) to mission effectiveness, and (c) to flight safety; (3) criteria and/or categories for automation at the man-machine interface, against which the individual mission tasks could be rated; and (4) a method for rating the mission tasks in relation to the automation categories derived. AUTOMATION AND PILOT INTERACTIONS IN NIGHT OR ALL-WEATHER TACTICAL OPERATIONS
W. H. MCKINLAY *In* AGARD Guidance-Control-Navigation Automation for Night All-Weather Tactical Operations 10 p Oct. 1985
Avail: NTIS HC A07/MF A01

Some of the areas in which automation could be used to reduce pilot workload when operating at night or in low visibility are examined. It is shown that in navigation the pilot's task extends from the planning stage before take off to the point at which tactical decisions are taken in the air. The role of the mission planning system and the features of a system developed for this purpose are covered. The nature of the man-machine interface including its required features and the impact of the latter on the core avionic system including navigation and the MMI are addressed. Author

OPERATIONAL EXPERIENCES WITH NIGHT VISION GOGGLES IN HELICOPTER LOW-LEVEL FLIGHT AT NIGHT
H. HAIDN *In* AGARD Visual Protection and Enhancement 8p Dec. 1985 refs
Avail: NTIS HC A11/MF A01

The operational marginal conditions are described with regard to the threat analysis in the Central European theater. This is supplemented by a presentation of the technological and physical aspects of the available visual sensors, such as helmet mounted night vision goggles, low light level television, and forward looking infrared and their employment as pilotage aids within the helicopter cockpit. Also, a description is given of the work capabilities and limitations inherent with the employment of electro-optical vision aids. This involves a comparison of the visual capabilities of the unaided eye during low level flight with Moon illumination at night, conditions during reduced light levels, and viewing the same scene with electro-optical sensors. The requirement for glare protection within the cockpit is discussed and different solutions are represented. An exceptional and difficult problem to solve is currently presented by positive position fixing under the given circumstances. Aids and procedures to improve navigation were devised and are now successfully in use. Finally, the results of interviews with helicopter pilots, who have long term experience with the use of helmet mounted night vision goggles are discussed. Author

VISUAL AND SPECTRORADIOMETRIC PERFORMANCE CRITERIA FOR NIGHT VISION GOGGLES (NVG) COMPATIBLE AIRCRAFT INTERIOR LIGHTING
W. A. BREITMAIER and F. REETZ, III *In* AGARD Visual Protection and Enhancement 11 p Dec. 1985 refs
Avail: NTIS HC A11/MF A01

A draft military specification for NVG-compatible aircraft interior lighting was developed. The specification is based on the utilization of a specific type of NVG, the AN/AVS-6 Aviators Night Vision Imaging System (ANVIS). The performance requirements and testing methodology established in the specification and the rationale for developing these requirements are described. The performance requirements are affected by three factors: luminance, chromaticity, and ANVIS compatibility. Luminance requirements do not change drastically from the requirements that presently exist for interior lighting. However, the chromaticity requirements of green for primary and secondary lighting, and yellow for both master caution and warning indicators are different from those that presently exist. The reason for this change is that any lighting with a significant amount of red energy cannot be used in a cockpit that is required to be ANVIS compatible. The implications for this new color design for cockpit lighting are discussed together with the rationale for the chromaticity coordinates and limits chosen. ANVIS compatibility is defined in terms of the spectral sensitivity of the ANVIS and the combination of spectral radiance of the cockpit lighting and the outside world night radiance. Quantitative testing methodology for determining ANVIS compatibility of cockpit lighting is also discussed. A thorough description of all analytic and laboratory studies performed in support of this specification development is presented. Author

COMPUTER VISUAL SIMULATION OF CONTRAST SENSITIVITY DEFICITS INDUCED BY LASER AND CHEMICAL ANTIDOTE EXPOSURE
H. ZWICK, D. MONROE, and L. SHERMAN *In* AGARD Visual Protection and Enhancement 4 p Dec. 1985
Avail: NTIS HC A11/MF A01

Training in some complex combat related tasks may produce a degree of transient visual impairment which may simulate what could be expected in combat. A method is presented for simulating visual impairment produced by potential combat conditions. The use of a computer to both digitize and store as well as produce the simulated image has provided an ideal tool for research. The degree of realism provided by such simulation offers suggestions for development of more realistic training techniques Author

DYNAMIC BEHAVIOUR OF SPHERICAL AND ASPHERICAL CONTACT LENSES EXPOSED TO +GZ-ACCELERATION FORCES
H. PUNT, A. C. H. VANDENHEUVEL, H. H. VANDENBIGGELAAR (Royal Netherlands Air Force, The Hague.), G. J. HOEKSTRA, and A. J. P. ROUWEN (Militair Hospitaal Dr. A. Mathijsen, Utrecht (Netherlands).) *In* AGARD Visual Protection and Enhancement 5 p Dec. 1985
Avail: NTIS HC A11/MF A01

A study was made of the behavior of two types of hard contact lenses fitted to a young myopic pilot and exposed to +Gz-acceleration forces. The degree of dislocation of the hard lenses was studied as was the pathological phenomena of the cornea under increasing +Gz-forces. The two types of the evaluated contact lenses are a conventional spherical polymethylmethacrylate (PMMA) lens and an aspherical gas-permeable lens. In a human centrifuge a test person was exposed to +Gz-forces increasing from +1 to +9 Gz. In the gondola a videotelecamara was focussed at the head of the test person during the total test session. It could be concluded that the aspherical gas-permeable contact lenses maintained an optimal concentration under all circumstances. The conventional hard contact lenses with a spherical base curve and a smaller diameter showed downward decentration under increasing +Gz-loads from +6 Gz to a peak value of 8.6 Gz. However, the dislocation never caused the contact lens to leave the cornea. The results are discussed in relation to practical consequences for pilot flying high performance aircraft. Author

HUMAN FACTORS: THE CINDERELLA DISCIPLINE IN COCKPIT INTERFACE DESIGN
K. W. MARTIN and J. LAYCOCK (Royal Aircraft Establishment, Farnborough, England) *In* AGARD Visual Protection and Enhancement 10 p Dec. 1985
Avail: NTIS HC A11/MF A01

The present trend in military aircraft design towards compact cockpits, multifunction controls and displays, and integrated systems within more agile and smaller airframes, has resulted in a greater need for human factors involvement in the design of the man machine interface. The cockpit of the modern military aircraft is inevitably a compromise of conflicting design disciplines, and one in which human factors fails to achieve any long term influence because the discipline lacks the absolute argument necessary for survival in the industrial environment. If human factors are to establish the degree of influence the current levels of research justify, then a new approach is necessary. This approach must recognize the practical problems associated with the design and manufacture of the integrated weapons delivery system that future aircraft represent. One possible approach may be the generation of human factors design tools, for use by engineers, which incorporate human sensory emulations and provide outputs that can be integrated into the engineering discipline. BASELINE EXPERIMENTS IN TELEOPERATOR CONTROL
W. W. HANKINS, III and R. W. MIXON Jul. 1986 65 p
(NASA-TP-2547; L-15963; NAS 1.60:2547) Avail: NTIS HC A04/MF A01 CSCL 05H

Studies have been conducted at the NASA Langley Research Center (LaRC) to establish baseline human teleoperator interface data and to assess the influence of some of the interface parameters on human performance in teleoperation. As baseline data, the results will be used to assess future interface improvements resulting from this research in basic teleoperator human factors. In addition, the data have been used to validate LaRC's basic teleoperator hardware setup and to compare initial teleoperator study results. Four subjects controlled a modified industrial manipulator to perform a simple task involving both high and low precision. Two different schemes for controlling the manipulator were studied along with both direct and indirect viewing of the task. Performance of the task was measured as the length of time required to complete the task along with the number of errors made in the process. Analyses of variance were computed to determine the significance of the influences of each of the independent variables. Comparisons were also made between the LaRC data and data taken earlier by Grumman Aerospace Corp. at their facilities. Author

DESIGN AND PRODUCTION OF DAMAGE-RESISTANT TRAY PACK CONTAINERS Final Report, 13 Apr. 1984 - 31 Jul. 1985
R. D. CUMMINGS Jul. 1985 242 p refs
(Contract DAAK60-84-C-0011; DA PROJ. 1L1-62724-AH-99) (AD-A164595; NATICK-TR-86/008) Avail: NTIS HC A11/MF A01 CSCL 06H

The tray pack is a food container that serves the functions of food storage vessel; food heating vessel; and food serving vessel. The lid is drawn from 90-pound per base box (0.010-inch-thick) steel. The bottom or can is drawn from 90-pound per base box (0.010-inch-thick) steel. Both top and bottom have a polymeric inner linear and an outer organic coating. The cause of tray pack damage were determined to be: prestressing caused by vacuum

packing and underfilling; hydrodynamic forces induced by relative fluid motion within the tray pack at the moment of impact during dropping; and denting of the thin tray body material. The inability of the tray pack shipping container to withstand stacking loads was determined to be caused by poor tolerances of the shipping containers and denting of separation pads by the tray lid sealing seam. Test results show that damage can be prevented by avoiding vacuum packing, making the tray packs from 98-pound material, using a tray pack design employing reinforcing beads, using pads that nest within the sealing seam of the tray pack, and packing the tray packs so that the lids of the bottom two face down and top two face up. Test results also show that unit loads of tray packs can be stacked four high by using a properly dimensioned telescoping shipping container, the nesting pads and the two-up, two-down packing technique. DEMOGRAPHIC AND ANTHROPOMETRIC ASSESSMENT OF US ARMY ANTHROPOMETRIC DATA BASE Interim Report, Sep. 1984 - Apr. 1985
B. BRADTMILLER, J. RATNAPARKHI, and TEBBETTS, ILSE Aug. 1985 83 p
(Contract DAAK60-84-C-0086; DA PROJ. 1L1-62723-AH-98)
(AD-A164637; NATICK-TR-86/004) Avail: NTIS HC A05/MF A01 CSCL 05B

It has been nearly 20 years since the last anthropometric survey of Army males was conducted and about eight years since the last survey of Army females. The purpose of this report is to assess the extent to which the Army's existing anthropometric data base is representative of the current Army active duty force, both demographically and anthropometrically. The demographic variables of age, sex, and race are compared for the Army's existing anthropometric data base, the current active duty force, and the projected force of the 1990s. The changes in these variables occurring in the Army population are also contrasted with those occurring in the U.S. population at large. The anthropometric variables of stature and weight are compared for the existing data base and current active duty officers. Other anthropometric variables that are affected by race and age are also examined. Differences in anthropometric variables between the existing data base and the current active duty force are discussed in the context of secular trends in anthropometric measures from the U.S. population at large and other military populations. The implications of using the Army's existing anthropometric data base in the design and sizing of clothing and personal equipment are examined in light of the present and projected demographic composition of the Army active duty force. A LIGHTWEIGHT IMPERMEABLE SUIT FOR CHEMICAL PROTECTION IN WARM CONDITIONS: A PRELIMINARY LOOK AT THE CONCEPT
R. I. TILLEY, J. M. STANDERWICK, G. J. LONG, and H. D. CRONE Aug. 1985 22 p refs
(AD-A164687; MRL-R-972) Avail: NTIS HC A02/MF A01 CSCL 15B

A lightweight overgarment made of spun-bonded polyethylene was compared with the UK No. 1 Mk 3 NBC suit in terms of the heat burden imposed on wearers. The physiological responses of volunteers exercising in warm conditions were measured for both clothing ensembles and were found to be similar. These results suggested that the concept of a lightweight impermeable NBC suit for wear in jungle conditions was worthy of close investigation. Results also confirmed previous observations that soldiers wearing NBC clothing in warm and humid conditions could do little more than adopt a defensive position if they were not to become heat stress casualties. HUMAN FACTORS IN RULE-BASED SYSTEMS Final Report
P. E. LEHNER, D. ZIRK, R. B. HALL, and L. ADELMAN 14 Oct. 1985 30 p refs
(Contract N00014-83-C-0537)
(AD-A165309; AD-E301922; PAR-85-109) Avail: NTIS HC A03/MF A01 CSCL 05H

This report summarizes several experiments investigating the impact of mental models and cognitive consistency on user/expert system interaction. Results indicate that user/expert system combined problem solving performance significantly improves if the user has a good mental model of expert system processes. Furthermore, cognitive consistency between the user and system problem solving procedures only degrades performance in situations where users do not have a good mental model. Some practical implications of this research is discussed.

PREBIOTIC MATTER IN INTERSTELLAR MOLECULES
R. D. BROWN (Monash University, Clayton, Australia) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 123-137. refs

The pathways by which aminoacids (AA) may have been constructed from various interstellar molecules are discussed, with attention focused on the detection of aminoacids in molecular clouds, and the gas-phase production of AA in these clouds. A search for the simplest AA, glycine, has thus far been unsuccessful. However, the possibility that chemically close relatives might be formed by gas-phase reactions in molecular clouds is considered. Again, consideration is restricted to glycine. Through crude calculations, it was discovered that a reasonable rate of glycinonitrile production is feasible and that fractional abundances could be as high as 10 to the -10th. Hence, glycinonitrile illustrates the possible pathway to proteins and primitive life. The question of interstellar molecular survival during the formation of planetary systems by the collapse of molecular clouds is addressed. It is suggested that heavy meteoritic falls would have brought this material to the earth's surface. It is also suggested that the chemical ancestry of life passes through interstellar AA nitriles rather than through the acids themselves. In addition, it seems feasible that this ancestry goes back to a parental molecular cloud, which may have, in effect, led to the evolution of life on other planets. K.K.

RECENT OBSERVATIONS OF ORGANIC MOLECULES IN NEARBY COLD, DARK INTERSTELLAR CLOUDS
H. SUZUKI, M. OHISHI, M. MORIMOTO, N. KAIFU (Nobeyama Radio Observatory, Nagano, Japan), P. FRIBERG (Massachusetts, University; Five College Radio Astronomy Observatory, Amherst) et al. IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 139-144. refs
(Contract NAGW-436; NSF AST-82-12252)

Recent investigations of the organic chemistry of relatively nearby cold, dark interstellar clouds are reported. Specifically, the presence of interstellar tricarbon monoxide (C3O) in Taurus Molecular Cloud 1 (TMC-1) is confirmed. The first detection in such regions of acetaldehyde (CH3CHO), the most complex oxygen-containing organic molecule yet found in dark clouds is reported, as well as the first astronomical detection of several molecular rotational transitions, including the J = 18-17 and 14-13 transitions of cyanodiacetylene (HC5N), the 1(01)-0(00) transition of acetaldehyde, and the J = 5-4 transition of C3O. A significant upper limit is set on the abundance of cyanocarbene (HCCN) as a result of the first reported interstellar search for this molecule. Author

A86-38140* Leiden Univ. (Netherlands).
INFRARED SPECTRAL IDENTIFICATION OF COMPLEX ORGANIC MOLECULES IN INTERSTELLAR GRAINS
J. M. GREENBERG and W. SCHUTTE (Leiden, Rijksuniversiteit, Netherlands) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 145-150. refs
(Contract NGR-33-018-148)

The chemical evolution of interstellar grains leads ultimately to a comparison consisting largely of complex organic molecules. Comparison of infrared absorption spectra of laboratory produced analogue materials with astronomical observations confirm the the presence of similar molecules in interstellar space. The abundance of this complex organic matter derived from the strength of the absorption bands is of the order of ten million solar masses and is almost certainly as large or larger than all conceivable planets. Author

A86-38141
UNIVERSAL PROTEIN ANCESTORS FROM HYDROGEN CYANIDE AND WATER
C. N. MATTHEWS (Illinois, University, Chicago) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 151-156. refs

The crude organic solids which are formed in planetary, interplanetary and interstellar environments are analyzed, and connections are made between the components of these solids and the beginnings of life. It is proposed that a low energy route leading directly to the synthesis of heteropolypeptides, hydrogen cyanide and water is at the root of this cosmochemistry. The Miller-Urey paradigm is explained and laboratory and extraterrestrial data attest to the universality of the HCN polymerization process. This process accounts for both the past synthesis of protein ancestors on earth and reactions presently proceeding in the solar system, i.e., on planetary bodies around other stars and in the dusty molecular clouds of spiral galaxies. It is concluded that the existence of this preferred pathway enhances the probability that life is widespread throughout the universe. K.K.

A86-38142
PANSPERMIA - A MODERN ASTROPHYSICAL AND BIOLOGICAL APPROACH
J. M. GREENBERG and P. WEBER (Leiden, Rijksuniversiteit, Netherlands) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 157-164. refs

For the first time a laboratory simulation of the effect of the interstellar environment has been used to provide quantitative estimates of bacterial spore survival in the space between the stars. In the diffuse regions between clouds ten percent survival is limited to at most hundreds of years although one in ten thousand may survive for several thousand years. Within common dense clouds the ten percent life expectancy is extended to tens of millions of years because of the severely reduced ultraviolet within these clouds as well as because of the accretion of ultraviolet absorbing mantles on the spores. The random motion of molecular clouds is shown to provide a possible vehicle for transport of spores from one solar system to another. The most hazardous times in such a journey are at the start and finish and, although the requirements for survival during these periods are quantified here, the possibility or probability of their being satisfied remains pure conjecture. SYNTHESIS AND ANALYSIS IN CHEMICAL EVOLUTION
C. PONNAMPERUMA (Maryland, University, College Park) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 185-197. refs

In the first part, the synthesis of the fundamental complex molecules of life (aminoacids and their polymerization to proteins, lipids, sugars, purines and pyrimidines, and nucleic acids) from simple molecules (H2O, CH4, NH3, HCN, CO2, etc) under a variety of natural and laboratory conditions and sources of energy is examined. In the second part, the analysis of the data that confirm the early appearance of life on earth and the presence of complex organic compounds in a variety of environments (carbonaceous chondritic meteorites, the atmospheres of Jupiter and Titan, interstellar space, etc.) is examined. All these results confirm the universal effectiveness of chemical evolution. Author

A86-38148
THE UNIVERSAL DIAGRAMS AND LIFE IN THE UNIVERSE
M. KAFATOS (George Mason University, Fairfax, VA) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 245-249. refs

The simplest properties of all matter are compared in an effort to attain some insights about life that would apply elsewhere. Many classes of known objects in the universe are put on common plots, called universal diagrams. The quantities plotted are mass, size, luminous output, temperature, angular momentum and entropy change of the universe due to radiation by these objects. The mass-luminosity diagram is presented, and after being juxtaposed with information provided by the temperature-luminosity diagram, the mass-angular momentum diagram and the entropy change diagram, it is concluded that what is normally referred to as the universe, with R at about 10 to the 28th cm and M at about 10 to the 56th gr, is not in any other way different from the rest of the objects that it is supposed to contain. As far as animate life in the universe is concerned, intelligent creatures would have masses of a similar magnitude to humans. Moreover, their buildings and artifacts would also be similar in magnitude. The question of explosive objects is also addressed. K.K.

IN THE BEGINNING . . . THERE WAS CLAY?
R. SPANGENBURG and D. MOSER Space World (ISSN 0038-6332), vol. W-5-269, May 1986, p. 21-23.

Current NASA Ames research in support of the Cairns-Smith clay-life theory is discussed. The demonstration of the conversion, storage, and transfer of energy in clay supports the picture of clay as a prebiotic template for living organic matter. Such a template would allow fast chemical transitions and support the functions of adaptive behavior, self-replication, growth and repair, and the process of natural selection. The presence of clays in addition to amino acids in an uncontaminated carbonaceous meteorite discovered in 1970 may also support the clay-life theory. R.R.

CHARACTERIZATION OF BIOGENIC ELEMENTS IN INTERPLANETARY DUST PARTICLES
T. E. BUNCH *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 41 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Those particles that were designated cometary are aggregates of amorphous materials including carbon, iron-magnesium silicates, sulfides, metal and trace amounts of unusual phases. Most aggregates are carbon-rich with major and minor element abundances similar to a fine grained matrix of carbonaceous chondrites. Several particles were analyzed by a laser microprobe. The negative ionic species identified to date include carbon clusters, protonated carbon clusters, CN-, HCN-, CNO-, PO2-, PO3-, S-, S2- asnd OH-. These species are similar to those observed in cometary spectra and they support the assumption that organic materials are present. The occurance of phosphate ions suggests the presence of apatite or whitlockite. Cometary particle characteristics may indicate that the component grains represent primitive unaltered dust whose overall properties are extremely similar to altered primitive dust in carbonaceous chondrites.

Avail: NTIS HC A07/MF A01 CSCL 06C

The present research includes searches for important new interstellar constituents; observations relevant to differentiating between different models for the chemical processes that are important in the interstellar environment; and coordinated studies of the chemistry, physics, and dynamics of molecular clouds which are the sites or possible future sites of star formation. Recent research has included the detection and study of four new interstellar molecules; searches which have placed upper limits on the abundance of several other potential constituents of interstellar clouds; quantitative studies of comparative molecular abundances in different types of interstellar clouds; investigation of reaction pathways for astrochemistry from a comparison of theory and the observed abundance of related species such as isomers and isotopic variants; studies of possible tracers of energenic events related to star formation, including silicon and sulfur containing molecules; and mapping of physical, chemical, and dynamical properties over extended regions of nearby cold molecular clouds. Avail: NTIS HC A07/MF A01 CSCL 06C

Both observational and theoretical studies of molecular clouds are hindered by many difficulties. One way to partially circumvent the difficulties of characterizing the chemistry within these objects is to study the relative abundances of isomers which are synthesized from a common set of precursors. Unfortunately, only one such system has been confirmed, the HCN/HNC pair of isomers. While the basic outlines of its chemistry have been known for some years, there are still many aspects of the chemistry which are unclear. Another potential pair of isomers is HCO+/HOC+; HCO+ is an abundant instellar molecule and a tentative identification of HOC+ has been made in Sgr B2. This identification is being challenged, however, based on theoretical and laboratory evidence that HOC+ reacts with H2. Another potential pair of interstellar isomers is methyl cyanide (CH3CN, acetonitrile) and methyl isocyanide (CH3NC). The cyanide is well known, however the isocyanide has yet to be observed despite theoretical predictions that appreciable quantities should be present. Author

PHOTOLYSIS PRODUCTS OF CO, NH3 AND H2O AND THEIR SIGNIFICANCE TO REACTIONS ON INTERSTELLAR GRAINS
J. P. FERRIS *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 44 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

With the increase in evidence that interstellar grains are the basic building blocks of comets and with the realization that comet collisions with the earth have probably occured at a much higher frequency than earlier assumed it may be presumed that interstellar dust chemistry played an important role in the early chemistry of the earth. As a part of the study of the photochemical processes taking place on interstellar grains the photolysis of mixtures of CO, NH3 and H2O was performed at 10 K, 77K and 298K. The reaction products were determined by GC/MS and HPLC analysis to be lactic acid, glycolic acid, hydroxyacetamide, urea, biuret, oxamic acid, oxamide, glyceric acid and glyceramide. Ethylene glycol and glycerol were also detected but is is not clear at present whether these are true photoproducts or contaminants. The mechanism of formation of these molecules are discussed as well as their possible significance to the origins of life. Author

OBSERVATIONAL EXOBIOLOGY
J. TARTER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 45 May 1986 Prepared in cooperation with Search for Extraterrestrial Intelligence Inst., Los Altos, Calif.
Avail: NTIS HC A07/MF A01 CSCL 06C

The Earth's atmosphere absorbs partially or completely many ultraviolet, infrared and submillimeter wavelengths. Atmospheric seeing distorts small images, imposing a limit on the achievable angular resolution at optical and infrared wavelengths that is much poorer than the intrinsic capability of telescope optics. The atomic and molecular species of the atmosphere confuse or prevent the spectral studies of similar compounds outside of the terrestrial environment. Telescopes placed in orbit above the atmosphere avoid these problems and enjoy a unique view of the universe. There are many complex questions pertaining to the origin and evolution of the biogenic elements and compounds and the existence of terrestrial types of planets elsewhere that can be only tackled from orbiting facilities. The detailed nature of the spacecraft, platforms and instrumentation most likely to be launched by the United States and Europe in the near future in an attempt to determine what observational programs would be tractable and which areas of interest to exobiology required hardware capabilities beyond those currently envisioned are considered. THE ORGANIC AEROSOLS OF TITAN
B. N. KHARE, C. SAGAN, W. R. THOMPSON, E. T. ARAKAWA, F. SUITS, T. A. CALCOTT, M. W. WILLIAMS, S. SHRADER, H. OGINO, T. O. WILLINGHAM et al. *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 48 May 1986 Submitted for publication
Avail: NTIS HC A07/MF A01 CSCL 06C

A dark reddish organic solid, called tholin, is synthesized from simulated Titanian atmospheres by irradiation with high energy electrons in a plasma discharge. The visible reflection spectrum of this tholin is found to be similar to that of high altitude aerosols responsible for the albedo and reddish color of Titan. The real (n) and imaginary (k) parts of the complex refractive index of thin films of Titan prepared by continuous dc discharge through a 0.9 N2/0.1 CH4 gas mixture at 0.2 mb is determined from X-ray to microwave frequencies. Values of n (approx. 1.65) and k (approx. 0.004 to 0.08) in the visible are consistent with deductions made by groundbased and spaceborne observations of Titan. Many infrared absorption features are present in k(lambda), including the 4.6 micrometer nitrile band. Molecular analysis of the volatile components of this tholin was performed by sequential and nonsequential pyrolytic gas chromatography/mass spectrometry. More than one hundred organic compounds are released; tentative identifications include saturated and unsaturated aliphatic hydrocarbons, substituted polycylic aromatics, nitriles, amines, pyrroles, pyrazines, pyridines, pyrimidines, and the purine, adenine. In addition,acid hydrolysis produces a racemic mixture of biological and nonbiological amino acids. Many of these molecules are implicated in the origin of life on Earth, suggesting Titan as a contemporary laboratory environment for prebiological organic chemistry on a planetary scale. Author

THE D TO H RATIO ON TITAN AND THE PLANETS: IMPLICATIONS FOR ORIGIN AND EVOLUTION OF PLANETARY ATMOSPHERES
J. P. PINTO, J. I. LUNINE (California Inst. of Tech., Pasadena), S. J. KIM, and Y. L. YUNG *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 49 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Measurements of deuterated methane show that Titan's atmosphere is enriched by at least several times in deuterium compared to the major planets. Potential causative factors for this enrichment are condensation to form tropospheric methane clouds, fractionation occuring over a hypothetical CH4-C2H2 ocean and between the ocean and the clathrate crust beneath, fractionation which occurred during the formation of Titan and fractionation occuring as a result of the evolution of Titan's atmosphere. The greater part of the observed fractionation is probably derived from the formation of Titan and the subsequent evolution of Titan atmosphere driven by photochemistry. The latter process is developed here for the first time. The D/H ratio in a planetary atmosphere is one readily available measure of the origin and evolution of the hydrogen bearing volatiles on the planet. Comparison between D/H ratio in the inner solar system and the outer solar system may pose important constraints on current theories. Author

A GAS CHROMATOGRAPH EXPERIMENT FOR A TITAN ENTRY PROBE

G. C. CARLE, D. R. KOJIRO, B. J. OHARA, J. R. VALENTIN, V. R. W. OBERBECK, and T. W. SCATTERGOOD (State Univ. of New York, Stony Brook) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 53 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Development of a gas chromatographic technique for analysis of aerosols and volatile organics from a Titan probe is now in progress. Preliminary investigations of aerosol collectors have shown that an electrostatic device should be the most efficient for the particle sizes expected in Titan's atmosphere. Such a device particularly lends itself to development of a simple pyrolyzer which can be used to break down any collected organic conglomerate structures into volatile fragments. Those fragments can subsequently be analyzed by GC providing information about the original chemical structure of the aerosols. Studies show that as little as 1 to 5 micrograms of model aerosol can be successfully analyzed. High altitude atmospheric gas sampling will also be important on Titan due to the great depth of the atmosphere. Studies show that a GC analysis of model Titan atmospheres at pressures approximating this altitude can be made with a sensitivity of a few ten's of parts-per-billion for the trace gases of interest. MOLECULAR AND ELEMENTAL DUST ANALYZER (MEDA) FOR THE COMET RENDEZVOUS ASTEROID FLYBY MISSION

B. J. OHARA, G. C. CARLE, and B. C. CLARK (Martin Marietta Aerospace, Denver, Colo.) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 54 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Comets are some to the most primitive bodies in the solar system and therefore should contain elemental, chemical, and isotopic records of the early history of the solar system. An opportunity to perform in situ analyses of a comet nucleus exists with the Comet Rendezvous Asteroid Flyby (CRAF) mission. An integrated gas chromatograph/X-ray fluorescence instrument (MEDA), being proposed for inclusion onboard the CRAF spacecraft, will measure the molecular and elemental constituents of collected dust grains and ices. The gas chromatograph, employing helium ionization detectors and three columns designed to separate light gases, polar gases, and hydrocarbons will measure the volatile compounds of the biogenic elements thermally released from collected dust grains. The sensitivity of the GC for compounds of interest is at the picogram level. X-ray fluorescence utilized cryogenically cooled Si(Li) solid state detectors of nominal 150 eV resolution at 5.9 keV. Based on laboratory work with carbonaceous meteorites, both the GC and XRF can perform meaningful analyses with a few micrograms of collected comet dust. Author

INVESTIGATION OF POROUS POLYMER GAS CHROMATOGRAPHIC PACKINGS FOR ATMOSPHERIC ANALYSIS OF EXTRATERRESTRIAL BODIES

G. E. POLLOCK *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 55 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Measurement of the permanent gases in the atmospheres of mission targets is a major objective. A 16 meter long Porapak N column was used on the Venus probe and required a rather high carrier gas flow rate. The researchers have, therefore, surveyed commercial porous polymer types which had some ability to resolve nitrogen, oxygen, argon and carbon monoxide gases. Porapaks N and Q appeared superior to most. Batch to batch variation, however, was quite wide, so the researchers learned how to synthesize porous polymer and investigated some of the factors affecting the separations. A polymer was synthesized which was superior to all commercial products and allowed at least a 50% reduction in length and flow rate of carrier gas. Similar studies were made concerning the separation of hydrocarbons and new porous polymers have been synthesized which represent significant improvements in time of analysis, column, and carrier gas flow rate. MINIATURE METASTABLE IONIZATION DETECTORS FOR EXOBIOLOGY FLIGHT EXPERIMENTS

F. H. WOELLER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 56 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

The Metastable Ionization Detector (MID) is three orders of magnitude more sensitive than the thermal conductivity detectors used on previous flight instruments. The miniature MID provides scientists with a much smaller and highly sensitive detector for flight gas chromatographs. A miniature MID featuring an unconventional triaxial electrode configuration was developed and used routinely in the laboratory. Although much smaller and lighter than the commercial MID, its performance characteristics parallel those of the traditional design. The detector is compatible with the modulated voltage circuitry, also developed here, and thus can perform over an expanded response range of more than 7 orders magnitude. A micro volume version of a miniature MID, with an internal volume of less than 8 microliter, was recently designed is now being tested. The micro volume MID uses carrier gas flow rates of approx. 2cc/min thus eliminating the need for makeup gas when capillary columns are used. Author

MULTIPLEX GAS CHROMATOGRAPHY: A NOVEL ANALYTICAL TECHNIQUE FOR FUTURE PLANETARY STUDIES

J. R. VALENTIN, G. C. CARLE, and J. B. PHILLIPS (University of Southern Illinois, Carbondale) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 57 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Determination of molecular species comprised of the biogenic elements in the atmospheres of planets and moons of the solar system is one the foremost requirements of the exobiologist studying chemical evolution and the origin of life. Multiplex chromatography is a technique where many samples are pseudo-randomly introduced to the chromatograph without regard to elution of preceding components. The resulting data are then reduced using mathematical techniques such as cross correlation or Fourier Transforms. To demonstrate the utility of this technique for future solar system exploration, chemical modulators were developed. Several advantages were realized from this technique in combination with these modulators: improvement in detection limits of several orders of magnitude, improvement in the analysis of complex mixtures by selectively modulating some of the components present in the sample, increase in the number of analyses that can be conducted in a given period of time, and reduction in the amount of expendables needed to run an analysis. In order to apply this technique in a real application, methane in ambient air was monitored continuously over a period of one week. By using ambient air as its own carrier all expendables beyond power were eliminated. Author

ION MOBILITY DRIFT SPECTROMETER (IMDS) AS A FLIGHT ANALYTICAL INSTRUMENT TECHNIQUE
D. R. KOJIRO and G. C. CARLE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 58 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

A detailed knowledge of the history and abundances of the biogenic elements and their compounds throughout the solar system can provide the exobiologists with a basis for understanding the conditions necessary for chemical evolution and the origin of life. The Ion Mobility Drift Spectrometer is an ion molecule reactor coupled with an ion drift spectrometer. Sample molecules are ionized to form product ions in the reactant region. An electric field moves the ions through a drift region against the flow of a drift gas where they are separated according to their size and structure producing an ion mobility spectrum. These spectra provide the IMDS with virtually universal sample identification capability. To conform to the rigid limits of weight, volume and consumables placed on flight instrumentation, several aspects of the IMDS must be studied and redesigned for flight use. In addition to miniaturization of the instrument, a reduction in the high flow rates used for the drift gas is an obvious necessary consideration. The effect of drastically reduced drift flow rates on IMDS spectra was investigated by lowering flow rates from 500ml/min to 50ml/min. Changes in peak shape, drift time and total spectra were studied at each flow rate. Author

ENERGY YIELDS IN THE PREBIOTIC SYNTHESIS OF HYDROGEN CYANIDE AND FORMALDEHYDE
R. STRIBLING and S. L. MILLER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 61 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Prebiotic experiments are usually reported in terms of carbon yields, i.e., the yield of product based on the total carbon in the system. These experiments usually involve a large input of energy and are designed to maximize the yields of product. However, large inputs of energy result in multiple activation of the reactants and products. A more realistic prebiotic experiment is to remove the products of the activation step so they are not exposed a second time to the energy source. This is equivalent to transporting the products synthesized in the primitive atmosphere to the ocean, and thereby protecting them from destruction by atmospheric energy sources. Experiments of this type, using lower inputs of energy, give energy yields (moles of products/joule) which can be used to estimate the relative importance of the different energy sources on the primitive earth. Simulated prebiotic atmospheres containing either CH4, CO or CO2 with N2, H2O and variable amounts of H2 were subjected to a high frequency Tesla coil. Samples of the aqueous phase were taken at various time intervals from 1 hr to 7 days, and the energy yields were obtained by extrapolation to zero time. The samples were analyzed for HCN with the cyanide electrode and for H2CO by chromotropic acid. The spark energy was estimated by calorimetry. The temperature rise in an insulated discharge flask was compared with the temperature rise from a resistance heater in the same flask. These results will be compared with calculated production rates of HCN and H2CO from lightning and a number of photochemical processes on the primitive Earth. Author

SYNTHESIS AND ANALYSIS IN STUDIES OF CHEMICAL EVOLUTION
C. PONNAMPERUMA, M. K. HOBISH, K. KOBAYASHI, L. L. HUA, and N. SENARATNE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 62 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Studies of the various processes that may have given rise to life on the Earth have demonstrated the appropriateness of an approach that makes use of analysis and synthesis. Analysis of extraterrestrial samples in the form of meteorites has demonstrated the presence of several precursors of biomolecules, most notably a full suite of nucleic acid bases and nucleotides of biological significance. These species were determined after exhaustive extraction of the sample and subsequent analysis using HPLC, GC, MS, and GC-MS. Procedural blanks indicate that these molecules are likely not the result of contamination during the extraction and analysis process. Similar species were found as products of spark discharge experiments in atmospheres thought to mimic primitive Earth conditions. These results indicate that the basic chemistry underlying these syntheses is common, and that life may not be unique to the Earth. Studies underway in the laboratory make use of proton nuclear magnetic resonance spectroscopy as a probe to assess associations between selected amino acids and any of several nucleotides comprising their genetic code and genetic anticode sequences. These studies demonstrate a clear selectivity by the anticode sequences, thus confirming the hydrophobicity studies performed by Lacey et al. These studies further support the contention that life is likely a natural result of the physics and chemistry of the universe. Author

ISOTOPIC CHARACTERISATION OF PREBIOTIC SYNTHESIS OF ORGANIC MATERIAL
J. F. KERRIDGE (California Univ., Los Angeles.) and S. CHANG *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 63 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Many primitive meteorites contain an insoluble organic material, much like terrestrial kerogen, whose mode of origin is currently unknown. When subjected to stepwise decomposition, this material, unlike its terrestrial counterpart, reveals characteristic release patterns for the stable isotopes of carbon, hydrogen and nitrogen as a function of fractional release of each element. The purpose of this study is to try to match those release patterns using organic matter synthesised in the laboratory under controlled conditions. If successful, such a study would shed light on the origin of kerogen-like organic matter in the early solar system and, by extension, on prebiotic organic synthesis in general. The range of possible syntheses, starting materials and reaction conditions to be investigated is considerable. Samples analysed to date include: a heavy oil produced by Fischer-Tropsch-type catalysis of CO + H2; a solid residue generated by a plasma discharge in CO + H2 + N2; a solid deposited on the electrodes of a Miller-Urey synthesis operating on CH4 + H2O + N2; and a solid residue formed by polymerization of light hydrocarbons procured by a Miller-Urey discharge acting on CH4. Significant structure is observed in the release patterns for the carbon and hydrogen isotopes from the synthetic samples, though there is little evidence for isotopic fractionation during the analysis itself. ORIGIN OF LIFE AND IRON-RICH CLAYS
H. H. HARTMAN *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life 64 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The premise that life began with self-replicating iron-rich clays is explored. In association with these clays and UV light, polar organic molecules, such as oxalic acid, were synthesized. The

carbonaceous chondrites have both iron-rich clays and organic molecules. It is convenient to classify meteoritic organic matter into 3 categories: insoluble polymer, hydrocarbons and polar organics (soluble in water). Recent work on the delta D, delta N-15 and delta C-13 has made it clear that these three fractions have been made by three different mechanisms. A significant fraction of the insoluble polymer has a delta-D which suggests that it was made in an interstellar medium. The hydrocarbons seem to have been made on a parent body by a Fischer-Tropsch mechanism. The polar organics were probably synthesized in a mixture of carbonate (NH4)2CO3, Fe(++) ion and liquid water by radiolysis. In a set of experiments the radiolysis of (NH4)2CO3 in the presence and absence of Fe(++) ion has been examined. The synthesis of glycine in the presence of Fe(++) ion is 3-4 times that in the absence of ferrous ion. The effects of the addition of hydrocarbons to this mixture are explored. Iron-rich clays at low temperature and pressure are synthesized. So far the results are not sufficiently crystalline to look for replication. It should be noted that organic chelating agents such as oxalic acid do increase the crystallinity of the clays but not sufficiently. The hydrothermal synthesis of iron-rich clays is being examined. Author

CLAY ENERGETICS IN CHEMICAL EVOLUTION
L. M. COYNE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 65 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Clays have been implicated in the origin of terrestrial life since the 1950's. Originally they were considered agents which aid in selecting, concentrating and promoting oligomerization of the organic monomeric substituents of cellular life forms. However, more recently, it has been suggested that minerals, with particular emphasis on clays, may have played a yet more fundamental role. It has been suggested that clays are prototypic life forms in themselves and that they served as a template which directed the self-assembly of cellular life. If the clay-life theory is to have other than conceptual credibility, clays must be shown by experiment to execute the operations of cellular life, not only individually, but also in a sufficiently concerted manner as to produce some semblance of the functional attributes of living cells. Current studies are focussed on the ability of clays to absorb, store and transfer energy under plausible prebiotic conditions and to use this energy to drive chemistry of prebiotic relevance. Conclusions of the work are applicable to the role of clays either as substrates for organic chemistry, or in fueling their own life-mimetic processes. Author

FURTHER WORK ON SODIUM MONTMORILLONITE AS CATALYST FOR THE POLYMERIZATION OF ACTIVATED AMINO ACIDS
F. R. EIRICH and M. PAECHT-HOROWITZ (Hebrew Univ. of Jerusalem, Rehovot (Israel).) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 66 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

When the polycondensation of amino acid acylates was catalyzed with Na-montmorillonite, the polypeptides were consistently found to exhibit a distribution of discrete molecular weights, for as yet undiscovered reasons. One possible explanation was connected to the stepwise mode of monomer addition. New experiments have eliminated this possibility, so that there is the general assumption that this discreteness is the result of a preference of shorter oligomers to add to others of the same length, a feature that could be attributed to some structure of the platelet aggregates of the montmorillonite. The production of optical stereoisomers is anticipated when D,L-amino acids are polymerized on montmorillonite. Having used an optically active surface, the essence of the results lies not only in the occurrence of optically active oligomers and polymers, but also in the fact that the latter exhibit the same molecular weight characteristics as the D,L-polymers. Preparatory to work contemplated on a parallel synthesis of amino acid and nucleotide oligomers, studies were continued on the co-adsorption of amino acids, nucleotides, and amino acid-nucleotides on montmorillonite. ADSORPTION AND CONDENSATION OF AMINO ACIDS AND NUCLEOTIDES WITH SOLUBLE MINERAL SALTS
J. ORENBERG and N. LAHAV (Hebrew Univ. of Jerusalem, Rehovot (Israel).) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 67 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The directed synthesis of biopolymers in an abiotic environment is presumably a cyclic sequence of steps which may be realized in a fluctuating environment such as a prebiotic pond undergoing wetting-drying cycles. Soluble mineral salts have been proposed as an essential component of this fluctuating environment. The following sequence may be considered as a most primitive mechanism of information transfer in a fluctuating environment: (1) adsorption of a biomolecule onto a soluable mineral salt surface to act as an adsorbed template; (2) specific adsorption of biomonomers onto the adsorbed template; (3) condensation of the adsorbed biomonomers; and (4) desorption of the elongated oligomer. In this investigation, the salts selected for study were CaSO4.2H2O(gypsum), SrSO4, and several other metal sulfates and chlorides. Adsorption of the monomeric species, gly, 5'AMP 5'GMP, and 5'CMP was investigated. The adsorbed template biopolymers used were Poly-A, Poly-G, Poly-C, and Poly-U. The results of studies involving these experimental participants, the first two steps of the proposed primitive information transfer mechanism, and condensation of amino acids to form oligomers in a fluctuating environment are to be reported. PALEOSOLS AND THE CHEMICAL EVOLUTION OF THE ATMOSPHERE
H. D. HOLLAND, E. A. ZBINDEN, and J. P. PINTO *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evoltuion of Life p 68 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The chemistry and mineralogy of soils reflects the chemistry of the atmosphere below which they develop. Today the presence of a cover of land plants can obscure the signature of a highly oxidizing atmosphere. Prior to the advent of higher land plants ca. 400 m.y. ago the obscuring effect of a biological interface should have been minor. It can be shown that under such conditions the behavior of ferrous iron during weathering depends on the relationship between the ratio of the net concentration of oxidants to the concentration of acids in rainwater, and on the ratio of the oxygen demand to the acid demand for complete weathering of the parent rock. An analysis of the behavior of iron in some 15 paleosols between 1.0 and 2.9 b.y. in age showed some time ago that iron was retained, or largely retained, in paleosols developed on rocks with a low ratio of oxidant demand to acid demand (R value) and was lost from paleosols with a high R value. The results indicate that between 1.1 and 2.9 b.y.b.p. the ratio of the net concentration of oxidants to CO2 in rainwater was less than ca. 1/600 of the present-day value. Work during the past year has sought to extend the data base for paleosols and to define more precisely the relationships between the composition of paleosols and the chemistry of the atmosphere below which they developed. COOPERATION OF CATALYSTS AND TEMPLATES
D. H. WHITE, A. KANAVARIOTI, C. W. NIBLEY, and J. W. MACKLIN (Washington Univ., Seattle.) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 69 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

In order to understand how self-reproducing molecules could have originated on the primitive Earth or extraterrestrial bodies, it

would be useful to find laboratory models of simple molecules which are able to carry out processes of catalysis and templating. Furthermore, it may be anticipated that systems in which several components are acting cooperatively to catalyze each other's synthesis will have different behavior with respect to natural selection than those of purely replicating systems. As the major focus of this work, laboratory models are devised to study the influence of short peptide catalysts on template reactions which produce oligonucleotides or additional peptides. Such catalysts could have been the earliest protoenzymes of selective advantage produced by replicating oligonucleotides. Since this is a complex problem, simpler systems are also studied which embody only one aspect at a time, such as peptide formation with and without a template, peptide catalysis of nontemplated peptide synthesis, and model reactions for replication of the type pioneered by Orgel. MOLECULAR MICROENVIRONMENTS: SOLVENT INTERACTIONS WITH NUCLEIC ACID BASES AND IONS

R. D. MACELROY ,and A. POHORILLE (California Univ., Berkeley.) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 70 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

The possibility of reconstructing plausible sequences of events in prebiotic molecular evolution is limited by the lack of fossil remains. However, with hindsight, one goal of molecular evolution was obvious: the development of molecular systems that became constituents of living systems. By understanding the interactions among molecules that are likely to have been present in the prebiotic environment, and that could have served as components in protobiotic molecular systems, plausible evolutionary sequences can be suggested. When stable aggregations of molecules form, a net decrease in free energy is observed in the system. Such changes occur when solvent molecules interact among themselves, as well as when they interact with organic species. A significant decrease in free energy, in systems of solvent and organic molecules, is due to entropy changes in the solvent. Entropy-driven interactioins played a major role in the organization of prebiotic systems, and understanding the energetics of them is essential to understanding molecular evolution. Author

INTRAMOLECULAR INTERACTIONS IN AMINOACYL NUCLEOTIDES: IMPLICATIONS REGARDING THE ORIGIN OF GENETIC CODING AND PROTEIN SYNTHESIS

J. C. LACEY, JR., D. W. MULLINS, JR., C. L. WATKINS, and L. M. HALL *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 71 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Cellular organisms store information as sequences of nucleotides in double stranded DNA. This information is useless unless it can be converted into the active molecular species, protein. This is done in contemporary creatures first by transcription of one strand to give a complementary strand of mRNA. The sequence of nucleotides is then translated into a specific sequence of amino acids in a protein. Translation is made possible by a genetic coding system in which a sequence of three nucleotides codes for a specific amino acid. The origin and evolution of any chemical system can be understood through elucidation of the properties of the chemical entities which make up the system. There is an underlying logic to the coding system revealed by a correlation of the hydrophobicities of amino acids and their anticodonic nucleotides (i.e., the complement of the codon). Its importance lies in the fact that every amino acid going into protein synthesis must first be activated. This is universally accomplished with ATP. Past studies have concentrated on the chemistry of the adenylates, but more recently we have found, through the use of NMR, that we can observe intramolecular interactions even at low concentrations, between amino acid side chains and nucleotide base rings in these adenylates. The use of this type of compound thus affords a novel way of elucidating the manner in which amino acids and nucleotides interact with each other. In aqueous solution, when a hydrophobic amino acid is attached to the most hydrophobic nucleotide, AMP, a hydrophobic interaction takes place between the amino acid side chain and the adenine ring. The studies to be reported concern these hydrophobic interactions. Author

MOLECULAR REPLICATION

L. E. ORGEL *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 72 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

The object of our research program is to understand how polynucleotide replication originated on the primitive Earth. This is a central issue in studies of the origins of life, since a process similar to modern DNA and RNA synthesis is likely to have formed the basis for the most primitive system of genetic information transfer. The major conclusion of studies so far is that a preformed polynucleotide template under many different experimental conditions will facilitate the synthesis of a new oligonucleotide with a sequence complementary to that of the template. It has been shown, for example, that poly(C) facilitates the synthesis of long oligo(G)s and that the short template CCGCC facilities the synthesis of its complement GGCGG. Very recently we have shown that template-directed synthesis is not limited to the standard oligonucleotide substrates. Nucleic acid-like molecules with a pyrophosphate group replacing the phosphate of the standard nucleic acid backbone are readily synthesized from deoxynucleotide 3'-5'-diphosphates on appropriate templates. STEREOSELECTIVE AMINOACYLATION OF RNA

D. A. USHER, M. C. NEEDELS, and T. BRENNER *In* NASA, Washington Symposium on Chemical Evolution and the Origin and Evolution of Life p 73 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Prebiotic chemistry is faced with a major problem: how could a controlled and selective reaction occur, when there is present in the same solution a large number of alternative possible coreactants? This problem is solved in the modern cell by the presence of enzymes, which are not only highly efficient and controllable catalysts, but which also can impose on their substrates a precise structural requirement. However, enzymes are the result of billions of years of evolution, and we cannot invoke them as prebiotic catalysts. One approach to solving this problem in the prebiotic context is to make use of template-directed reactions. These reactions increase the number of structural requirements that must be simultaneously present in a molecule for it to be able to react, and thereby increase the selectivity of the reaction. They also can give a large increase in the rate of a reaction, if the template constrains two potential coreactants to lie close together. A third benefit is that information that is present in the template molecule can be passed on to the product molecules. If the earliest organisms were based on proteins and nucleic acids, then the investigation of peptide synthesis on an oligonucleotide template is highly relevant to the study of the origin of life.

MODELS OF GLYCOLYSIS: GLYCERALDEHYDE AS A SOURCE OF ENERGY AND MONOMERS FOR PREBIOTIC CONDENSATION REACTIONS

A. L. WEBER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 74 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

All organisms require energy in a chemical form for maintenance and growth. In contemporary life this chemical energy is obtained by the synthesis of the phosphoanhydride bonds of ATP. Among the biological processes that yield ATP, fermentation is generally

considered primitive, because it operates under anaerobic conditions by substrate-level phosphorylation which does not require compartmentation by membranes. Fermentation by the glycolytic pathway, which is found in almost every living cell, is an especially attractive energy source for primitive life. Glycolysis not only produces useful chemical energy (ATP), but intermediates of this pathway are also involved in amino acid synthesis and photosynthetic carbon-fixation. It is believed that energy and substrates needed for the origin of life were provided by nonenzymatic chemical reactions that resemble the enzyme-mediated reactions of glycolysis. These nonenzymatic reactions would have provided a starting point for the evolutionary development of glycolysis. Author

A COMPARATIVE STUDY OF PREBIOTIC AND PRESENT DAY TRANSLATIONAL MODELS

R. REIN, G. RAGHUNATHAN, J. MCDONALD, M. SHIBATA, and S. SRINIVASAN *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 75 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

It is generally recognized that the understanding of the molecular basis of primitive translation is a fundamental step in developing a theory of the origin of life. However, even in modern molecular biology, the mechanism for the decoding of messenger RNA triplet codons into an amino acid sequence of a protein on the ribosome is understood incompletely. Most of the proposed models for prebiotic translation lack, not only experimental support, but also a careful theoretical scrutiny of their compatibility with well understood stereochemical and energetic principles of nucleic acid structure, molecular recognition principles, and the chemistry of peptide bond formation. Present studies are concerned with comparative structural modelling and mechanistic simulation of the decoding apparatus ranging from those proposed for prebiotic conditions to the ones involved in modern biology. Any primitive decoding machinery based on nucleic acids and proteins, and most likely the modern day system, has to satisfy certain geometrical constraints. The charged amino acyl and the peptidyl termini of successive adaptors have to be adjacent in space in order to satisfy the stereochemical requirements for amide bond formation. Simultaneously, the same adaptors have to recognize successive codons on the messenger. This translational complex has to be realized by components that obey nucleic acid conformational principles, stabilities, and specificities. This generalized condition greatly restricts the number of acceptable adaptor structures. Author

PROTOBIOLOGICAL INFORMATION, BIDIRECTIONAL RECOGNITION AND REVERSE TRANSLATION

S. W. FOX, T. NAKASHIMA, A. PRZYBYLSKI, and G. VAUGHAN *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 76 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Emergence of protobiological information has been suggested by experiments in which heated mixtures of alpha-amino acids order themselves into a self limited array of thermal proteins. The polymers display selective catalytic, hormonal, and other activities. Interactions of varied cationic thermal proteins with polynucleotides indicate selective recognition in both directions. Reverse translation is partly a missing link in the molecular evolution flowsheet. The self ordering of amino acids serves conceptually as a deterministic evolutionary precursor of the modern coding mechanism. The possibility for the evolution of information at an early nontemplated protein stage is supported by findings of electrical signals from proteinoid microspheres prepared with no DNA/RNA in their history. The deposition of thermal copolyamino acids on lipid membranes in the Mueller-Rudin apparatus has here been found to produce electrical behavior like that evoked by bacterial EIM polypeptide. A new procedure is to make a film of membrane on the electrode; the results provide maximal repeatability. The principle of nonrandom biomacromolecular specificity identified by these studies in molecular evolution have been extrapolated to principles of evolution of advanced organisms. Author

PHOTOCHEMICAL REACTIONS OF VARIOUS MODEL PROTOCELL SYSTEMS

C. E. FOLSOME *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 77 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Models for the emergence of cellular life on the primitive Earth, and for physical environments of that era have been studied that embody these assumptions: (1) pregenetic cellular forms were phase-bounded systems primarily photosynthetic in nature, and (2) the early Earth environment was anoxic (lacking appreciable amounts of free hydrogen). It was found that organic structures can also be formed under anoxic conditions (N2, CO3=, H2O) by protracted longwavelength UV radiation. Apparently these structures form initially as organic layers upon $CaCO_3$ crystalloids. The question remains as to whether the UV photosynthetic ability of such phase bounded structures is a curiosity, or a general property of phase bounded systems which is of direct interest to the emergence of cellular life. The question of the requirement and sailient features of a phase boundary for UV photosynthetic abilities was addressed by searching for similar general physical properties which might be manifest in a variety of other simple protocell-like structures. Since it has been shown that laboratory protocell models can effect the UV photosynthesis of low molecular weight compounds, this reaction is being used as an assay to survey other types of structures for similar UV photosynthetic reactions. Various kinds of structures surveyed are: (1) proteinoids; (2) liposomes; (3) reconstituted cell membrane spheroids; (4) coacervates; and (5) model protocells formed under anoxic conditions. M.G.

THE PRINCIPLE OF COOPERATION AND LIFE'S ORIGIN AND EVOLUTION

J. ORO, G. ARMANGUE, and A. MAR *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 78 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

In simple terms a living entity is a negentropic system that replicates, mutates and evoluves. A number of suggestions have been made, such as directed panspermia, atmospheric photosynthesis, genetic overtaking from inorganic processes, etc., as alternative models to the accepted Oparin-Haldane-Urey model of the origin of life on Earth. This has probably occurred because in spite of tremendous advances in the prebiotic synthesis of biochemical compounds, the fundamental problem of the appearance of the first life--a primordial replicating cell-ancestral to all other forms of extant life, has remained elusive. This is indeed a reflection on the different fundamental nature of the problem involved. Regardless of which were the fundamental processes which occurred on the primitive Earth, it has to end up with the fundamental characteristics of an ancestral protocell. The problem of the emergence of the first ancestral cell was one of synergistic macromolecular cooperation, as it has been discussed by authors recently (COSPAR XXV Plenary Meeting). An analogous situation must have occurred at the time of the appearance of the first eucaryotic organism. Procaryotic life appeared probably during the first 600 million years of Earth history when the Earth was sufficiently cool and continually bombarded (in the late accretion period) by comets and minor bodies of the solar system, when the sea had not yet acquired its present form. BASE PAIRING AND BASE MIS-PAIRING IN NUCLEIC ACIDS
A. H. J. WANG and A. RICH *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 78 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

In recent years we have learned that DNA is conformationally active. It can exist in a number of different stable conformations including both right-handed and left-handed forms. Using single crystal X-ray diffraction analysis we are able to discover not only additional conformations of the nucleic acids but also different types of hydrogen bonded base-base interactions. Although Watson-Crick base pairings are the predominant type of interaction in double helical DNA, they are not the only types. Recently, we have been able to examine mismatching of guanine-thymine base pairs in left-handed Z-DNA at atomic resolution (1A). A minimum amount of distortion of the sugar phosphate backbone is found in the G x T pairing in which the bases are held together by two hydrogen bonds in the wobble pairing interaction. Because of the high resolution of the analysis we can visualize water molecules which fill in to accommodate the other hydrogen bonding positions in the bases which are not used in the base-base interactions. Studies on other DNA oligomers have revealed that other types of non-Watson-Crick hydrogen bonding interactions can occur. In the structure of a DNA octamer with the sequence d(GCGTACGC) complexed to an antibiotic triostin A, it was found that the two central AT base pairs are held together by Hoogsteen rather than Watson-Crick base pairs. Similarly, the G x C base pairs at the ends are also Hoogsteen rather than Watson-Crick pairing. Hoogsteen base pairs make a modified helix which is distinct from the Watson-Crick double helix. CARBON EXCHANGE BETWEEN THE MANTLE AND THE CRUST AND ITS EFFECT UPON THE ATMOSPHERE: TODAY COMPARED TO ARCHEAN TIME
D. DESMARAIS *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 81 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Paleobiologists now recognize that the Earth's biosphere has been profoundly affected by geologic processes. One very important process is the dissipation of heat which has been generated by radioactivity and/or stored within the earth. Heat flow is responsible for crustal movements and therefore it is the principal architect for constructing the environments (e.g. shallow marine, continental, etc.) wherein life developed and flourished. Heat flow has also influenced the movements of volatile elements (e.g. C, N, H, S, rare gases, etc.) both within the Earth's crust and between the crust and mantle. The inventory of these elements in the Earth's crust is important, not just because some of them constitute the building blocks of organic matter, but also because they influence the biosphere's climate. The purpose of this work is to evaluate how the decline of heat flow over the course of the Earth's history has influenced the carbon inventory in the Earth's crust. Such an evaluation must first consider whether the rate at which carbon is presently being exchanged between the mantle and crust is sufficient to play an important role in controlling the crustal inventory. Secondly, this exchange of carbon must be reevaluated in the context of the Precambrian Earth's environment. One very important consideration is that the upper mantle was perhaps 300 C hotter 3 b.y. ago than it is today. Author

EARTH'S EARLY ATMOSPHERE AS SEEN FROM CARBON AND NITROGEN ISOTOPIC ANALYSIS OF ARCHEAN SEDIMENTS
E. K. GIBSON, JR., L. P. CARR, I. GILMOUR (Open Univ., Milton, England), and C. T. PILLINGER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 82 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The origin and evolution of the Earth's early atmosphere has long been a topic of great interest but determination of actual compositions over geologic time is a difficult problem. However, recent systematic studies of stromatolite deposits (Precambrian Paleobiology Research Group) has extended our knowledge of Archean ecosystems. It has been shown that many stromatolite deposits have undergone negligible alteration since their time of formation. The discovery of primary fluid inclusions within unaltered 3.5 b.y. old Archiean sediments and the observation that the 3.3 b.y. old Barberton cherts have remained closed to argon loss and have not been subjected to thermal metamorphism suggests that an opportunity exists for the direct measurement of the volatile constituents present at their time of formation. Of primary interest to this study was the possibility that the stromatolites and other Archean sediments might retain a vestige of the atmosphere and thus afford an indication of the variations in carbon dioxide and nitrogen isotopic compositions with time. A suite of essentially unaltered Archean stromatolites and the cherts of different ages and geologic sites have been analyzed for their trapped carbon dioxide and nitrogen compositions by the stepped combustion extraction tech nique utilizing static mass spectrometers for the isotope measurements. USE OF LABORATORY SIMULATED PYROLYSIS IN TRACING THE HISTORY OF SEDIMENTARY ORGANIC MATTER
I. R. KAPLAN, E. TANNENBAUM, and B. E. HUIZINGA *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 82 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Results from laboratory simulated pyrolyses experiments show that in addition to depth of burial, preservation of kerogen, and hence any morphologic structure in it, is also dependent on the mineral matrix with which it is associated. In the presence of clay minerals, and especially under dry conditions, extractable lipids released during kerogen decomposition are more rapidly destroyed than in the presence of calcite or chert matrices. The result is production of gas, polar bitumen and pyrobitumen and destruction of biomarkers. During such an early reorganization of the kerogen, the biomarker constituents can be destroyed, or unrecognizably altered. The above process of organic residues maturation appears to be inhibited in the presence of water and is significantly reduced where kerogen is hosted in limestones, dolomites or cherts. These minerals have been characteristically found to be the most reliable in yielding morphological fossils and small quantities of extractable bitumen in Archean and Proterozoic rocks. To understand the validity of chemical and morphological fossils, in the early geologic record, it will be necessary to understand the process of kerogen in sedimentary rocks. To test the role of various minerals on the preservation process, kerogen extracted from a variety of rocks has been heated together with montmorillonite, illite and calcite. The kinetics of the process has been monitored and the products quantitatively identified. M.G.

ISOTOPIC, PETROLOGIC AND BIOGEOCHEMICAL INVESTIGATIONS OF BANDED IRON-FORMATIONS

J. M. HAYES, A. J. KAUFMAN, C. KLEIN (New Mexico Univ., Albuquerque), S. A. STUDLEY, M. E. BAUR (California Univ., Los Angeles), and M. R. WALTER (Bureau of Mineral Resources, Geology and Geophysics, Canberra, Australia) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 84 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

It is recognized that the first occurrence of banded iron-formations (BIFs) clearly predates biological oxygenation of the atmosphere-hydrosphere system and that their last occurrences extend beyond plausible dates of pervasive biological oxygenation. For this reason, and because enormous quantities of oxidizing power have been sequestered in them, it is widely thought that these massive, but enigmatic, sediments must encode information about the mechanism and timing of the rise of atmospheric O2. By coupling isotopic analyses of iron-formation carbonates with biogeochemical and petrologic investigations, we are studying (1) the mechanism of initial sedimentation of iron; (2) the role of iron in microbially mediated diagenetic processes in fresh iron-formation sediments; and (3) the logical integration of mechanisms of deposition with observed levels of banding. Thus far, it has been shown that (1) carbonates in BIFs of the Hamersley Group of Western Australia are isotopically inhomogenous; (2) the nature and pattern of isotopic ordering is not consistent with a metamorphic origin for the overall depletion of C-13 observed in the carbonates; (3) if biological, the origin of the C-13 depleted carbonate could be either respiratory or fermentative; (4) iron may have been precipitate d as Fe(3+), then reduced to Fe(2+) within the sediment; and (5) sedimentary biogeochemical systems may have been at least partially closed to mass transport of carbonate species. THE LUNAR NODAL TIDE AND THE DISTANCE TO TNE MOON DURING THE PRECAMBRIAN ERA

J. C. G. WALKER and K. J. ZAHNLE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 85 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

The origin and early evolution of life on Earth occurred under physical and chemical conditions distinctly different from those of the present day. The broad goal of this research program is to characterize these conditions. One aspect involves the dynamics of the Earth-Moon system, the distance of the Moon from the Earth, and the length of the day. These have evolved during the course of Earth history as a result of the dissipation of tidal energy. As the moon has receded the amplitude of oceanic tides has decreased while the increasing length of the day should have influenced climate and the circulation of atmosphere and ocean. A 23.3 year periodicity preserved in a 2500 million year old banded iron-formation was interpreted as reflecting the climatic influence of the lunar nodal tide. The corresponding lunar distance would then have been approx. 52 Earth radii. The influence of the lunar nodal tide is also apparent in rocks with an age of 680 million years B.P. The derived value for lunar distance 2500 million years ago is the only datum on the dynamics of the Earth-Moon system during the Precambrian era of Earth history. The implied development of Precambrian tidal friction is in accord with more recent paleontological evidence as well as the long term stability of the lunar orbit. Author

HIGHER-ORDER STRUCTURE OF RRNA

R. R. GUTELL and C. R. WOESE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 88 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

A comparative search for phylogenetically covarying basepair replacements within potential helices has been the only reliable method to determine the correct secondary structure of the 3 rRNAs, 5S, 16S, and 23S. The analysis of 16S from a wide phylogenetic spectrum, that includes various branches of the eubacteria, archaebacteria, eucaryotes, in addition to the mitochondria and chloroplast, is beginning to reveal the constraints on the secondary structures of these rRNAs. Based on the success of this analysis, and the assumption that higher order structure will also be phylogenetically conserved, a comparative search was initiated for positions that show co-variation not involved in secondary structure helices. From a list of potential higher order interactions within 16S rRNA, two higher-order interactions are presented. The first of these interactions involves positions 570 and 866. Based on the extent of phylogenetic covariation between these positions while maintaining Watson-Crick pairing, this higher-order interaction is considered proven. The other interaction involves a minimum of six positions between the 1400 and 1500 regions of the 16S rRNA. Although these patterns of covariation are not as striking as the 570/866 interaction, the fact that they all exist in an anti-parallel fashion and that experimental methods previously implicated these two regions of the molecule in tRNA function suggests that these interactions be given serious consideration. Author

THE RRNA EVOLUTION AND PROCARYOTIC PHYLOGENY

G. E. FOX *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 89 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Studies of ribosomal RNA primary structure allow reconstruction of phylogenetic trees for prokaryotic organisms. Such studies reveal major dichotomy among the bacteria that separates them into eubacteria and archaebacteria. Both groupings are further segmented into several major divisions. The results obtained from 5S rRNA sequences are essentially the same as those obtained with the 16S rRNA data. In the case of Gram negative bacteria the ribosomal RNA sequencing results can also be directly compared with hybridization studies and cytochrome c sequencing studies. There is again excellent agreement among the several methods. It seems likely then that the overall picture of microbial phylogeny that is emerging from the RNA sequence studies is a good approximation of the true history of these organisms. The RNA data allow examination of the evolutionary process in a semi-quantitative way. The secondary structures of these RNAs are largely established. As a result it is possible to recognize

examples of local structural evolution. Evolutionary pathways accounting for these events can be proposed and their probability can be assessed. Author

INVESTIGATIONS WITH METHANOBACTERIA AND WITH EVOLUTION OF THE GENETIC CODE
T. H. JUKES *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 90 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Mycoplasma capricolum was found by Osawa et al. to use UGA as the code of tryptophan and to contain 75% A + T in its DNA. This change could have been from evolutionary pressure to replace C + G by A + T. Numerous studies have been reported of evolution of proteins as measured by amino acid replacements that are observed when homologus proteins, such as hemoglobins from various vertebrates, are compared. These replacements result from nucleotide substitutions in amino acid codons in the corresponding genes. Simultaneously, silent nucleotide substitutions take place that can be studied when sequences of the genes are compared. These silent evolutionary changes take place mostly in third positions of codons. Two types of nucleotide substitutions are recognized: pyrimidine-pyrimidine and purine-purine interchanges (transitions) and pyriidine-purine interchanges (transversions). Silent transitions are favored when a corresponding transversion would produce an amino acid replacement. Conversely, silent transversions are favored by probability when transitions and transversions will both be silent. Extensive examples of these situations have been found in protein genes, and it is evident that transversions in silent positions predominate in family boxes in most of the examples studied. In associated research a streptomycete from cow manure was found to produce an extracellular enzyme capable of lysing the pseudomurein-contining methanogen Methanobacterium formicicum. Author

IS THE ATPASE FROM HALOBACTERIUM SACCHAROVORUM AN EVOLUTIONARY RELIC?
L. I. HOCHSTEIN, W. ALTEKAR (Bhabha Research Center (India).), and H. KRISTJANSSON *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 91 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The ATP Synthase Complex present in the membranes of mitochondria, chloroplasts or bacteria is composed of 2 sectors: FO, an integral membrane protein consisting of 3 subunits mediating proton translocation across the membrane and F1, the catalytic component composed of 5 non-identical subunits. The apparent early origin of the ATP Synthase Complex, as implied by its ubiquitous distribution, seems inconsistent with its structural and functional complexity and raises the question if simpler versions of the ATP Synthase exist. Such an ATP Synthase has been searched for in various Archaebacteria. A purified halobacterial ATPase activity which possesses certain properties consistent with those of an ATP Synthase but which has a different subunit structure is described. M.G.

FUNCTIONAL AND EVOLUTIONARY RELATIONSHIPS BETWEEN BACTERIORHODOPSIN AND HALORHODOPSIN IN THE ARCHAEBACTERIUM, HALOBACTERIUM HALOBIUM
J. K. LANYI *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 92 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The archaebacteria occupy a unique place in phylogenetic trees constructed from analyses of sequences from key informational macromolecules, and their study continues to yield interesting ideas on the early evolution and divergence of biological forms. It is now known that the halobacteria among these species contain various retinal-proteins, resembling eukaryotic rhodopsins, but with different functions. Two of these pigments, located in the cytoplasmic membranes of the bacteria, are bacteriorhodopsin (a light-driven proton pump) and halorhodopsin (a light-driven chloride pump). Comparison of these systems is expected to reveal structure/function relationships in these simple (primitive?) energy transducing membrane components and evolutionary relationships which had produced the structural features which allow the divergent functions. Findings indicate that very different primary structures are needed for these proteins to accomplish their different functions. Indeed, analysis of partial amino acid sequences from halo-opsin shows already that few if any long segments exist which are homologous to bacterio-opsin. Either these proteins diverged a very long time ago to allow for the observed differences, or the evolutionary clock in the halobacteria runs faster than usual. M.G.

THIOREDOXINS IN EVOLUTIONARILY PRIMITIVE ORGANISMS
B. B. BUCHANAN *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 93 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Thioredoxins are low molecular weight redox proteins, alternating between the S-S (oxidized) and SH (reduced) states, that function in a number of biochemical processes, including DNA synthesis, DNA replication, and enzyme regulation. Until recently, reduced ferredoxin was known to serve as the source of reducing power for the reduction of thioredoxins only in oxygenic photosynthetic cells. In all other organisms, the source of hydrogen (electrons) for thioredoxin reduction was considered to be NADPH. It was found that Clostridium pasteurianum, an anaerobic organism normally living in the soil unexposed to light, resembles photosynthetic cells in using ferredoxin for the reduction of thioredoxin. The results reveal the existence of a pathway in which ferredoxin, provides the reducing power for the reduction of thioredoxin via the flavoprotein enzyme, ferredoxinthioredoxin reductase. In related studies, it was found that Chromatium vinosum, an anaerobic photosynthetic purple sulfur bacterium, resembles evolutionarily more advanced micro-organisms in having an NADP-thioredoxin system composed of a single thioredoxin which is reduced by NADPH via NADP-thioredoxin reductase. The adoption of the NADP-thioredoxin system by Chromatium seems appropriate in view of evidence tha the organi sm utilizes ATP-driven reverse electron transport. Finally, results of research directed towards the identification of target enzymes of the ferredoxin/thioredoxin system in a cyanobacterium (Nostoc muscorum), show that thioredoxin-linked photosynthetic enzymes of cyanobateria are similar to those of chloroplasts. It now seems that the ferredoxin/thioredoxin system functions in regulating CO2 assimilation via the reductive pentose phosphate cycle in oxygenic but not anoxygenic photosynthetic cells. M.G.

BIOSYNTHETIC PORPHYRINS AND THE ORIGIN OF PHOTOSYNTHESIS
D. MAUZERALL, A. LEY, and J. A. MERCER-SMITH (Los Alamos National Lab., N. Mex.) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 94 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Since the prebiotic atmosphere was anaerobic, if not reducing, a useful function of primordial photosynthesis would have been to photooxidize reduced substrates such as Fe(+2), S(-2) or reduced organic molecules and to emit hydrogen. Experiments have shown that the early biogenic pigments uroporphyrin and coproporphyrin do photooxidize organic compounds and emit hydrogen in the presence of a platinum catalyst. These experiments were carried out in dilute aqueous solution near neutral pH under anaerobic atmosphere, and quantum yields near 10-2 were obtained. Thus relevant prebiotic conditions were maintained. Rather then to further

optimize conditions, attempts were made to replace the platinum catalyst by a more prebiotically suitable catalyst. Trials with an Fe4S4(SR)4 cluster, in analogy to the present hydrogenase and nitrogenase, were not successful. However, experiments using cobalt complexes to catalyze the formation of hydrogen are promising. In analogy with biological photosynthetic systems which group pigments, electron transfer molecules and enzymes in clusters for efficiency, it was found that binding the biogenic porphyrins to the polyvinyl alcohol used to support the platinum catalyst did increase the quantum yield of the reaction. It was also found that ultraviolet light can serve to photo-oxidize porphyrinogens to porphyrins under anaerobic conditions. Thus the formation of the colorless porphyriogens by the extraordinarily simple biosynthetic pathway would not be a problem because of the prevalence of UV light in the prebiotic, anoxic atmosphere. OXYGEN AND THE EVOLUTION OF METABOLIC PATHWAYS

L. L. JAHNKE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 95 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

While a considerable amount of evidence has been accumulated about the history of oxygen on this planet, little is known about the relative amounts to which primitive cells might have been exposed. One clue may be found in the metabolic pathways of extant microorganisms. While eucaryotes are principally aerobic organisms, a number are capable of anaerobic growth by fermentation. One such eucaryotic microorganism, Saccharomyces cerevisiae, will grow in the complete absence of oxygen when supplemented with unsaturated fatty acid and sterol. Oxygen-requiring enzymes are involved in the synthesis of both of these compounds. Studies have demonstrated that the oxidative desaturation of palmitic acid and the conversion of squalene to sterols occur in the range of 10-(3) to 10(-2) PAL. Thus, if the oxygen requirements of these enzymatic processes are an indication, eucaryotes might be more primitive than anticipated from the microfossil record. Results of studies on the oxygen requirements for sterol and unsaturated fatty acid synthesis in a more primitive procaryotic system are also discussed. M.G.

EVOLUTION OF THIOL PROTECTIVE SYSTEMS IN PROKARYOTES

R. C. FAHEY and G. L. NEWTON *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 96 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Biological thiols are essential elements in most aspects of cell function but undergo rapid oxidation to disulfides in the presence of oxygen. The evolution of systems to protect against such oxygen toxicity was essential to the emergence of aerobic life. The protection system used by eukaryotes is based upon glutathione (GSH) and GSH-dependent enzymes but many bacteria lack GSH and apparently use other mechanisms. The objective of this research is to elaborate the thiol protective mechanisms employed by prokaryotes of widely divergent evolutionary origin and to understand why GSH became the central thiol employed in essentially all higher organisms. Thiol-selective fluorescent labeling and HPLC analysis has been used to determine key monothiol components. M.G.

MICROFOSSILS IN THE ANTARCTIC COLD DESERT: POSSIBLE IMPLICATIONS FOR MARS

E. I. FRIEDMANN and R. OCAMPO-FRIEDMANN (Florida Agricultural and Mechanical Univ., Tallahassee) *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 97 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

In the Ross Desert of Antarctica, the principal life form is the cryptoendolithic microbial community in the near-surface layers of porous sandstone rocks. Biological, geological, and climatic factors interact in a complex and precarious balance, making life possible in an otherwise hostile environment. Once this balance is tipped, fossilization sets in. In the reverse case, new colonization of the rock surface may be initiated. As a result, fossilization is contemporary with modern life and both may be simultaneously present in a mosaic pattern. Also, different stages of fossilization are present. The process of fossilization takes place in a nonaquatic environment. If primitive life ever appeared on Mars, it is possible that with increasing aridity, life withdrew into an endolithic niche similar to that in the Antarctic desert. Fossilization in a nonaquatic environment may have set in with the result that traces of past life could be preserved. If such was the case, the study of the fossilization process in Antarctica may hold useful information for the analysis of Martian samples for microfossils. Author

EVOLUTIONARY SIGNIFICANCE OF OSMOREGULATORY MECHANISMS IN CYANOBACTERIA

J. H. YOPP, J. H. PAVLICEK, and M. H. SIBLEY *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 98 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Physiological processes of all life forms on this planet are intrinsically related to their intracellular water potential. The overall goal was the elucidation of the mechanism(s) whereby the first oxygenic phtoautotrophs (the cyanobacteria) adjust their water potential to that of a changing external water potential (that is, osmoregulate). Osmoregulation is achieved by intracellular adjustment of inorganic and/or organic solutes (osmolytes) involving specific biochemical mechanisms. Structural and biochemical evolution within the cyanobacteria is believed completed (and fixed in present day forms) by the end of the Precambrain eon. Therefore, research using cyanobacteria of all three structural types (unicellular, filamentous, and branched), each grown in the photoautotrophic (PA), photoheterotrophic (PG), and chemotrophic (CH) modes of nutrition, should provide insight into the origin and evolution of the photosynthetically related osmoregulatory mechanisms of eukaryotic organisms. The chloroplasts of these organisms are phylogenetically related to the cyanobacteria. Author

MICROBIAL CONTRIBUTIONS TO THE PRECAMBRIAN EARTH

L. MARGULIS, D. BERMUDES, and R. OBAR *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 99 May 1986

Avail: NTIS HC A07/MF A01 CSCL 06C

Life has existed on Earth for approximately 3.5 billion years. For most of this time, prokaryotic communities provided the major biological forces changing the Earth. Many changes in atmospheric gas composition occurred during the Archean and Proterozoic eons as a result of microbial activity. Extant microbial communities were used to help understand the dynamics which contributed to these atmospheric changes. The microbial mat communities were characterized according to the organismic constituents. Symbiosis in microbial communities is recognized as a major force in cell evolution. Among the evolutinary enigmas investigated is the problem of the origin of the undulipodia. Undulipodial microtubules are still deployed for major cellular processes such as mitosis and meiosis. Several prokaryotes were tested for the presence of

the S1-type protein, so far only spirochetes were found to possess it. The S1-type protein is being sought in cyanobacteria reported to contain microtubules. B.G.

ORGANIC S13C VALUES VARY SLIGHTLY WITH SALINITY IN MICROBIAL MATS AT GUERRERO NEGRO, BAJA CALIFORNIA SUR, MEXICO: IMPLICATIONS FOR STROMATOLITE S13C VALUES
D. J. DESMARAIS, E. PETERSON, E. KWONG, and H. BUI *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 100 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Stromatolites, layered sedimentary rock structures produced by communities of microorganisms, constitute the most abundant early evidence of life on Earth. Microbial mats, which are found most frequently in hypersaline marine or hot spring environments, serve as useful modern analogs of stromatolitic communities. Biochemical studies of mats were conducted to assist in the interpretations of stromatolites. The data suggest that salinity effects are insufficient by themselves to cause the C-13 differences observed between Precambrian stromatolites and modern microbial mats. Author

THE FOSSIL RECORD OF EVOLUTION: ANALYSIS OF EXTINCTION
D. M. RAUP *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 102 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

There is increasing evidence that events in space have had direct effects on Earth history and on the history of life on Earth. Nowhere is this more evident than in mass extinction. The biosphere has undergone repeated devastation caused by relatively short-lived environmental stress, with species kill rates up to 80 and 95%. For five of the mass extinctions, geochemical or other evidence was reported suggesting large body impact as the cause of the environmental stress producing the extinctions. It was argued on statistical ground that the major extinction events are uniformly periodic in geological time. If it is true that large body impact is a principal cause of mass extinctions and if the periodicity is real, than a cosmic driving mechanism is inescapable. Paleontological data sets were developed which detail the ranges in geological time of about 4,000 families and 25,000 genera of fossil marine organisms. Analyses to date have concentrated on the most recent 250 million years. Associated with these studies are analyses of other aspects of Earth history which may have signatures indicative of extraterrestrial effects. Author

THE FOSSIL RECORD OF EVOLUTION: DATA ON DIVERSIFICATION AND EXTINCTION
J. J. SEPKOSKI, JR. *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 102 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Synoptic studies of the fossil record of complex life on Earth indicate increasingly that extinction, and especially mass extinction, were extremely important driving forces in the history of life. Analysis of a new compilation of geologic ranges for 25,000 genera of marine animals suggests that extinction events were much more frequent in occurrence and variable in magnitude than previously suspected. At least 30 well documented and potential mass extinctions were identified in the dataset. The most recent event, distributed over 260 to 0 ma. exhibit a stationary periodicity of 26.1 + or - 1 ma, implicating a cosmological forcing mechanism. Earlier events, especially in the 575 to 450 ma interval, are more frequent, possibly indicating either a breakdown of periodicity in the more distant past; and as yet undemonstrated diminution of the period length; or frequent aperiodic terrestrial perturbations of a less stable biota superimposed upon the cosmological periodicity. GEOCHEMICAL ANOMALIES, BOLIDE IMPACTS AND BIOLOGICAL EXTINCTIONS ON THE EARTH
F. ASARO, L. W. ALVAREZ, H. V. MICHEL, and W. ALVAREZ (California Univ., Berkeley.) *In* NASA, Washington Second Symposium in Chemical Evolution and the Origin and Evolution of Life p 104 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Geochemical and mineralogical techniques are used to search for evidence of extraterrestrial impacts associated with mass and lesser biological extinction peaks in the geological record. Studies of the Cretaceous-Tertiary boundary serve as a baseline for evaluating geochemical data from the extinction horizones. Other studies were generally concentrated on rock strata corresponding to the periodic extinction peaks noted by Raup and Sepkoski. A significant iridium anomaly in late Eocene marine sediments associated with extinctions of radiolaria in low latitudes and attributed to an extraterrestrial source is widely distributed in 8 to 9 sites around the world. CLIMATIC CONSEQUENCES OF VERY HIGH CO2 LEVELS IN EARTH'S EARLY ATMOSPHERE
J. F. KATSING *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 105 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Earth has approximately 60 bars of carbon dioxide tied up in carbonate rocks, or roughly 2/3 the amount of CO2 of the atmosphere of Venus. Two different lines of evidence, one based on thermodynamics and the other on geochemical cycles, indicate that a substantial fraction of thes CO2 may have resided in the atmosphere during the first few hundred million years of the Earth's history. A natural question which arises is whether this much CO2 would have resulted in a runaway greenhouse effect. One dimensional radiative/convective model calculations presented showed that the surface temperature of a hypothetical primitive atmosphere containing 20 bars of CO2 was less than 100 C; thus no runaway greenhouse effect would have occurred. The climatic stability of the early atmosphere is a consequence of three factors: reduced solar luminosity at that time, an increase in planetary albedo caused by Rayleigh scattering by CO2, and the stabilizing effects of a moist convection. The latter two factors are sufficient to prevent a CO2 induced runaway greenhouse effect on the present Earth as well, for CO2 levels up to 100 bars. Further studies are being undertaken to determine whether a runaway greenhouse effect could have occurred during the latter stages of the accretion process and, if so, whether it would have collapsed one the influx of material slowed down. A DECADE OF SETI OBSERVATIONS
R. S. DIXON *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 107 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

A full time dedicated search for extraterrestrial radio signals of intelligent origin has been in progress at the Ohio State University Radio Observatory since 1973. The radio telescope has a collecting area of 2200 square meters, which is equivalent to a circular dish 175 feet in diameter. The search concentrates on a 500 kHz bandwidth centered on the 1420 MHz hydrogen line, Doppler corrected to the galactic standard of rest. A large portion of the sky visible from Ohio was searched, with particulat emphasis on the galactic center region and the M31 Andromeda galaxy. The survey is largely computer automated, and all data reduction is done in real time. Two distinct populations of signals were detected. The first is a relatively small number of signals which persist for over a minute and which are clearly extraterrestrial in origin. The second is the large number of signals which persist less than 10 seconds whose locations are anticorrelated with the galactic plane

but show clumps along the galactic axis. None of these signals were observed to recur, despite repeated observations. The cause of these signals were not determined. Author

THE BERKELEY SERENDIP PROJECT
S. BOWYER, D. WERTHIMER, J. TARTER, and R. BUHSE *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 108 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

An automated system was designed to perform a real time search for narrow band radio signals in the spectra of sources in a regularly scheduled, non-SETI astronomical observing program. The system will compute the power spectrum using a 65,536 channel fast Fourier transform processor with a real time bandwidth of 128 KHz and 2 Hz per channel resolution. After search for peaks in a 100 KHz portion of the IF band of the radio telescope, the system will move to the next 100 KHz portion using a programmable frequency synthesizer. When the whole IF band is scanned, the process will start again. Unidentified peaks in the power spectra are candidates for further study and their celestial coordinates will be recorded along with the time and power, IF and RF frequency, and bandwidth of the peak. Most of the hardware was developed and the machine software is in the process of being finalized. A number of means for identifying and rejecting power spectra peaks which have a high likelihood of being nonuseful are being investigated. Author

AN INFRARED SEARCH FOR EXTRATERRESTRIAL LASER SIGNALS
A. BETZ *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 109 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The focus of project SETI is on microwave frequencies, where receivers fundamentally have the best sensitivity for the detection of narrow band signals. Such receivers, when coupled to existing radio telescopes, form an optimum system for broad area searches over the sky. Detection of narrow band infrared signals is best done with a laser heterodyne reciever similar in function to a microwave spectral line receiver. A receiver was built for astrophysical observations at 30 THz (10 microns) and the spectrometer is being adapted for SETI work. The receiver uses a small CO2 laser as the local oscillator, a HgCdTe diode as the photomixer, and a multichannel intermediate frequency (IF) filterbank. An advanced multichannel IF processor is now being built to detect infrared line radiation in 1000 spectral channels each 1 MHz wide. When completed this processor will be used with a ground based telescope next year for a survey of several hundred selected stars for narrow band CO2 laser signals at 30 THz. Author

USING THE IRAS DATA TO SEARCH IN THE ASTEROID BELT FOR ANY POTENTIAL EVIDENCE OF GALACTIC COLONIZATION
M. D. PAPAGIANNIS *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 110 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The end product of the biological evolution seems to be the appearance of technological civilizations, which are characterized by superior technology that supercedes biological capabilities. The Search for Extraterrestrial Intelligence (SETI) has gained scientific recognition in recent years. The concept of galactic colonization is debated extensively, with opinions ranging from the impossible to the inevitable, but without a clear resolution. Answers can be obtained only with experimental tests and not with endless debates. A search for large space colonies in the asteroid belt, an ideal source of raw materials for a spaceborne civilization, is a test of the galactic colonization theory. The catalogue of solar system objects obtained form the Infrared Astronomy Satellite (IRAS) observations at 12, 25, 60, and 100 microns, is an ideal source for such a search. The catalog is expected to be ready at the end of 1985 and will contain more than 10,000 objects. B.G.

OVERVIEW OF THE NASA SETI PROGRAM
B. M. OLIVER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 111 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The NASA Search of Extraterrestrial Intelligence (SETI) program plan is to scan the microwave window from 1 to 10 GHz with existing radio telescopes and sophisticated signal processing equipment looking for narrow band features that might represent artificial signals. A microwave spectrometer was built and is being field tested. A pattern recognition computer to search for drifting continuous wave signals and pulse trains in the output spectra is being designed. Equipment to characterize the radio frequency interference environment was also built. The plan is to complete the hardware and software by FY-88. Then, with increased funding, this equipment will be replicated in Very Large Scale Integration form. Observations, both a complete sky survey and a search fo nearby solar type stars, will begin in about 1990. The hypothesis that very powerful signals exist or that signals are being beamed at us will be tested. To detect the kinds of signals radiated at distances of 100 light years will require a collecting area kilometers in diameter. Author

STANFORD HARDWARE DEVELOPMENT PROGRAM
A. PETERSON, I. LINSCOTT, and J. BURR *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 112 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

Architectures for high performance, digital signal processing, particularly for high resolution, wide band spectrum analysis were developed. These developments are intended to provide instrumentation for NASA's Search for Extraterrestrial Intelligence (SETI) program. The real time signal processing is both formal and experimental. The efficient organization and optimal scheduling of signal processing algorithms were investigated. The work is complemented by efforts in processor architecture design and implementation. A high resolution, multichannel spectrometer that incorporates special purpose microcoded signal processors is being tested. A general purpose signal processor for the data from the multichannel spectrometer was designed to function as the processing element in a highly concurrent machine. The processor performance required for the spectrometer is in the range of 1000 to 10,000 million instructions per second (MIPS). Multiple node processor configurations, where each node performs at 100 MIPS, are sought. The nodes are microprogrammable and are interconnected through a network with high bandwidth for neighboring nodes, and medium bandwidth for nodes at larger distance. The implementation of both the current mutlichannel spectrometer and the signal processor as Very Large Scale Integration CMOS chip sets was commenced. Author

GOLDSTONE FIELD TEST ACTIVITIES: TARGET SEARCH
J. TARTER *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 113 May 1986 Prepared in cooperation with Search for Extraterrestrial Intelligence Inst., Los Altos, Calif.
Avail: NTIS HC A07/MF A01 CSCL 06C

In March of this year prototype SETI equipment was installed at DSS13, the 26 meter research and development antenna at NASA's Goldstone complex of satellite tracking dishes. The SETI equipment will remain at this site at least through the end of the summer so that the hardware and software developed for signal detection and recognition can be fully tested in a dynamic observatory environment. The field tests are expected to help understand which strategies for observing and which signal recognition algorithms perform best in the presence of strong

man-made interfering signals (RFI) and natural astronomical sources. Author

GOLDSTONE FIELD TEST ACTIVITIES: SKY SURVEY
S. GULKIS and E. T. OLSEN *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin and Evolution of Life p 114 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The goals are to conduct a research and development program aimed at determining the most effective way to do SETI within the constraints of current technology and estimated budgets. The general search strategy adopted is that which is recommended by the SETI Science Working Group. The strategy for an all sky survey for SETI was further developed over the last year. Scan patterns, scan rates, and signal detection algorithms were developed. Spectral power measurement instrumentation was tested at the Venus Station of the Goldstone Deep Space Communication Complex. A specially designed radio frequency interference (RFI) measurement system was built and installed at the Venus Station. A data base management system for storage and retrieval of the RFI data was partially implemented on a VAX 750 computer at the Jet Propulsion Laboratory. Author

JPL'S ROLE IN THE SETI PROGRAM
M. J. KLEIN *In* NASA, Washington Second Symposium on Chemical Evolution and the Origin of Life p 115 May 1986
Avail: NTIS HC A07/MF A01 CSCL 06C

The goal of the JPL SETI Team is to develop the strategies and the instrumentation required to carry out an effective, yet affordable, SETI Microwave Observing Program. The primary responsibility for JPL is the development and implementation of the Sky Survey component of the bimodal search program recommended by the SETI Science Working Group (NASA Technical Paper 2244, 1983). JPL is also responsible for the design and implementation of microwave analog instrumentation (including antenna feed systems, low noise RF amplifiers, antenna monitor and control interfaces, etc.) to cover the microwave window for the Sky Survey and the Target Search observations. The primary site for the current SETI Field Test activity is the Venus Station of the Goldstone Deep Space Communication Complex. A SETI controller was constructed and installed so that pre-programmed and real time SETI monitor and control data can be sent to and from the station controller. This unit will be interfaced with the MCSA. A SETI Hardware Handbook was prepared to describe the various systems that will be used by the project at the Venus Station; the handbook is frequently being expanded and updated. The 65,000 channel FFT Spectrum analyzer in the RFI Surveillance System was modified to permit operation with variable resolutions (300 Hz to less than 1 Hz) and with real-time accumulation, which will enhance the capability of the system for testing Sky Survey search strategies and signal detection algorithms. EXOBIOLOGY EXPERIMENT CONCEPTS FOR SPACE STATION
L. D. GRIFFITHS (Management and Technical Services Co., Washington, D.C.) and D. L. DEVINCENZI *In* NASA. Lyndon B. Johnson Space Center Space Station Planetology Experiments (SSPEX) 1 p May 1986
Avail: NTIS HC A05/MF A01 CSCL 03A

The exobiology discipline uses ground based and space flight resources to conduct a multidiscipline research effort dedicated to understanding fundamental questions about the origin, evolution, and distribution of life and life related molecules throughout the universe. Achievement of this understanding requires a methodical research strategy which traces the history of the biogenic elements from their origins in stellar formation processes through the chemical evolution of molecules essential for life to the origin and evolution of primitive and, ultimately, complex living species. Implementation of this strategy requires the collection and integration of data from solar system exploration spacecraft and ground based and orbiting observatories and laboratories. The Science Lab Module (SLM) of the Space Station orbiting complex may provide an ideal setting in which to perform certain classes of experiments which form the cornerstone of exobiology research. These experiments could demonstrate the pathways and processes by which biomolecules are synthesized under conditions that simulate the primitive Earth, planetary atmospheres, cometary ices, and interstellar dust grains. Exobiology experiments proposed for the Space Station generally fall into four classes: interactions among gases and grains (nucleation, accretion, gas-grain reactions), high energy chemistry for the production of biomolecules, physical and chemical processes occurring on an artificial comet, and tests of the theory of panspermia. EFFECTS OF 60 HZ ELECTRIC FIELDS ON OPERANT AND SOCIAL STRESS BEHAVIORS OF NONHUMAN PRIMATES
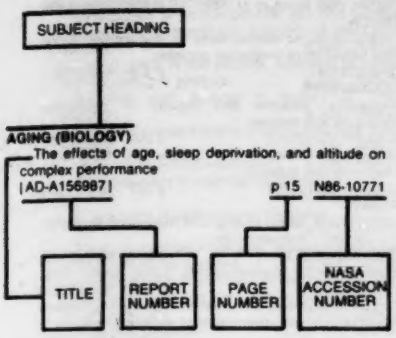
W. R. ROGERS, J. H. LUCAS, G. T. MOORE, and J. L. ORR 1985 18 p Presented at the DOE Contractors Conference, Alexandria, Va., 5 Nov. 1985
(Contract DE-AC02-80RA-50219)
(DE86-003748; CONF-8511143-1) Avail: NTIS HC A02/MF A01

An overall description of this research program is presented. The objectives are to investigate the use of nonhuman primates to investigate possible behavioral effects associated with exposure to high-intensity, 60 Hz, electric fields. DOE

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

T and B components of immunity in the presence of acute mountain sickness p 286 N86-27892

ALTITUDE TOLERANCE
Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia
p 278 N86-27877

AMBIENT TEMPERATURE
Human thermoregulatory responses to cold air are altered by repeated cold water immersion
p 281 A86-39094

AMIDES
A comparative study of prebiotic and present day translational models p 303 N86-26877

AMINO ACIDS
Synthesis and analysis in chemical evolution
p 297 A86-38145
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids
p 301 N86-26868
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts
p 301 N86-26869
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873
Stereoselective aminoacylation of RNA
p 302 N86-26875
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions p 302 N86-26876
A comparative study of prebiotic and present day translational models p 303 N86-26877
Protobiological informatoin, bidirectional recognition and reverse translation p 303 N86-26878

SUBJECT

AMMONIA

Investigations with methanobacteria and with evolution of the genetic code p 306 N86-26890
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium p 306 N86-26892
Amino acid spectrum of human blood in the presence of emotional stress p 287 N86-27001

AMMONIA

Photolysis products of CO, NH3 and H2O and their significance to reactions on interstellar grains p 298 N86-26849
Direct spectrophotometric method of assaying ammonia concentration in gas environment of seeding chambers p 280 N86-27900

ANAEROBES

The principle of cooperation and life's origin and evolution p 303 N86-26880
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893

ANALOG CIRCUITS

JPL's role in the SETI program p 310 N86-26913

ANIMALS

Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919

ANOMALIES

Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903

ANTARCTIC REGIONS

Microfossils in the Antarctic cold desert: Possible implications for Mars p 307 N86-26897

ANTHROPOMETRY

Demographic and anthropometric assessment of US Army anthropometric data base [AD-A164837] p 295 N86-26838

ANTIBODIES

Macrophage structure and function [AD-A163314] p 276 N86-26793

ANTIGENS

Macrophage structure and function [AD-A163314] p 276 N86-26793

ANTIRADIATION DRUGS

Cyclic adenosine-3',5'-monophosphate and cyclic guanosine-3',5'-monophosphate in the blood plasma of mice injected with chemicals of different radioprotective efficiency p 276 A86-39718
Radioprotective and therapeutic efficacy of carrageenan against proton radiation p 287 N86-27904

APPROACH CONTROL

A model and experimental analysis of pilot decision making behavior for various automatic approach conditions [NLR-TR-84037-U] p 292 N86-26835

ARCHITECTURE (COMPUTERS)

Stanford Hardware Development Program p 309 N86-26910

ARMED FORCES (UNITED STATES)

Changes in Naval Aviation Basic Instrument flight training: An analysis [AD-A164738] p 291 N86-26830
Demographic and anthropometric assessment of US Army anthropometric data base [AD-A164837] p 295 N86-26838
US Air Force combat psychiatry [AD-A165011] p 292 N86-27921

ARTIFICIAL INTELLIGENCE

Human factors in rule-based systems [AD-A165309] p 295 N86-26840

ASTRONAUT PERFORMANCE

Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) --- Russian book p 290 A86-38984

ASTRONAUT TRAINING

Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) --- Russian book p 290 A86-38984
Cosmonaut training --- Russian book p 293 A86-38988

ASTRONOMICAL CATALOGS

Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization p 309 N86-26908

ATMOSPHERIC CHEMISTRY

Paleosols and the chemical evolution of the atmosphere p 301 N86-26870

ATMOSPHERIC COMPOSITION

The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies p 299 N86-26858
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments p 304 N86-26883
Microbial contributions to the Precambrian Earth p 307 N86-26899
Intensity of photosynthesis in closteriopsis acicular var. africana Hind as a function of oxygen concentration in the atmosphere p 290 N86-27903

ATMOSPHERIC MODELS

Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863

ATROPHY

Effects of muscle atrophy on motor control [NASA-CR-177201] p 288 N86-27913

ATROPINE

Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919

ATTITUDE (INCLINATION)

Distinctions in humoral control of metabolism with simulation of spaceflight factors p 286 N86-27884
Some human reactions during 7-day antiorthostatic hypokinesia p 286 N86-27885

ATTITUDE INDICATORS

Changes in Naval Aviation Basic Instrument flight training: An analysis [AD-A164738] p 291 N86-26830

AUDITORY PERCEPTION

Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876

AUTOMATIC CONTROL

Baseline experiments in teleoperator control [NASA-TP-2547] p 294 N86-26836

AUTOMATION

Cockpit automation requirements derived from mission functions data p 293 N86-26318

AUTOMOBILES

Driving performance the day after use of loprazolam, flunitrazepam and placebo [VK-83-04] p 290 N86-26826
The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance [VK-83-05] p 290 N86-26827
Flurazepam HCL's residual (hangover) effects upon actual driving performance [VK-83-02] p 291 N86-26834

AUTORADIOGRAPHY

Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study [AD-A165040] p 277 N86-27867

AVIATION PSYCHOLOGY

The stress syndrome --- effects on pilot performance p 290 A86-37276
The healthy motivation to fly: No psychiatric diagnosis [AD-A164944] p 291 N86-26832

AVIONICS

Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319

AVOIDANCE

Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923

AZO COMPOUNDS

Effect of dibasol and some of its imidazo analogues on animal tolerance to gravitational accelerations and dynamics of development of postischemic cerebrovascular phenomena p 279 N86-27896

B

BABOONS

Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923

BACTERIA

No valid evidence exists for interstellar proteins, bacteria, etc p 296 A86-38143
The rRNA evolution and procaryotic phylogeny p 305 N86-26889
Investigations with methanobacteria and with evolution of the genetic code p 306 N86-26890
Is the ATPase from halobacterium saccharovorum an evolutionary relic? p 306 N86-26891
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium p 306 N86-26892
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893
Oxygen and the evolution of metabolic pathways p 307 N86-26895
Evolution of thiol protective systems in prokaryotes p 307 N86-26896
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria p 307 N86-26898
Lactobacteria and prophylaxis in space p 285 N86-27870
Reproductive capacity of microflora on polymers used in sealed environments p 280 N86-27897

BALANCE

Effect of rhythmic photic interference on working electroencephalogram and efficiency of human movements p 292 N86-27883

BAROTRAUMA

Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914

BASES (CHEMICAL)

Base pairing and base mis-pairing in nucleic acids p 304 N86-26881
Higher-order structure of rRNA p 305 N86-26888

BEHAVIOR

Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923

Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919

CIRCULAR POLARIZATION
Astronomical sources of circularly polarized light and their role in determining molecular chirality on earth p 297 A86-38144

CIRCULATION
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916

CLAYS
In the beginning . . . there was clay? p 297 A86-38624
Origin of life and iron-rich clays p 300 N86-26866
Clay energetics in chemical evolution p 301 N86-26867

CLIMATE
The lunar nodal tide and the distance to the Moon during the Precambrian era p 305 N86-26886
Climatic consequences of very high CO2 levels in Earth's early atmosphere p 306 N86-26904

CLINICAL MEDICINE
Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914

CLOSED ECOLOGICAL SYSTEMS
Intensity of photosynthesis in closteriopsis acicular var. africana Hind as a function of oxygen concentration in the atmosphere p 280 N86-27903

COCKPITS
Cockpit automation requirements derived from mission functions data p 293 N86-26318
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting p 294 N86-26807
Human factors: The Cinderella discipline in cockpit interface design p 294 N86-26825

COGNITION
Acquiring procedural skills from lesson sequences [AD-A164580] p 291 N86-26829
Human factors in rule-based systems [AD-A165309] p 295 N86-26840
Initial skill learning: An analysis of how elaborations facilitate the three components [AD-A165137] p 292 N86-27922

COLD ACCLIMATIZATION
Human thermoregulatory responses to cold air are altered by repeated cold water immersion p 281 A86-39094

COLD TOLERANCE
Effects of cold exposure on thermal status of men and women p 285 N86-27874

COLD WATER
Perceptual and physiological responses during exercise in cool and cold water [AD-A165491] p 283 N86-26800

COLOR VISION
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting p 294 N86-26807

COMBUSTION PRODUCTS
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials [AD-A165034] p 277 N86-27866

COMETARY ATMOSPHERES
Characterization of biogenic elements in interplanetary dust particles p 297 N86-26846
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission p 299 N86-26857

COMPUTER SYSTEMS DESIGN
Stanford Hardware Development Program p 309 N86-26910

COMPUTERIZED SIMULATION
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure p 294 N86-26813

CONCENTRATION (COMPOSITION)
Direct spectrophotometric method of assaying ammonia concentration in gas environment of seeding chambers p 280 N86-27900

CONCURRENT PROCESSING
Stanford Hardware Development Program p 309 N86-26910

CONDENSING
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts p 301 N86-26869

CONDITIONED REFLEXES
Influence of shipboard environmental factors on conditioned reflex activity of experimental animals during a long voyage p 278 N86-27873

CONSISTENCY
Human factors in rule-based systems [AD-A165309] p 295 N86-26840

CONSTRAINTS
A comparative study of prebiotic and present day translational models p 303 N86-26877

CONTACT LENSES
Contact lenses for pilots and aircrew in the services p 284 N86-26815
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces p 294 N86-26816
Soft contact lens wear during +G(Z) acceleration [AD-A165013] p 289 N86-27915

CONTRAST
Aeromedical lessons learned with night vision devices p 283 N86-26810
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure p 294 N86-26813

COOLING
Effects of cold exposure on thermal status of men and women p 285 N86-27874

CORONARY ARTERY DISEASE
Normal or pathological coronary status - Reflections and practical experiences for expertise with flight personnel p 282 A86-39774

COSMIC DUST
Molecular and Elemental Dust Analyzer (MEDA) for the comet rendezvous asteroid flyby mission p 299 N86-26857

COSMIC RAYS
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895

COSMOCHEMISTRY
Universal protein ancestors from hydrogen cyanide and water --- extraterrestrial origins p 296 A86-38141

COSMONAUTS
Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) --- Russian book p 290 A86-38984
Cosmonaut training --- Russian book p 293 A86-38988
Lactobacteria and prophylaxis in space p 285 N86-27870

COSMOS SATELLITES
Commentary on results of biological satellite program p 278 N86-27871

CRASHWORTHINESS
Validation of SOM-LA occupant response --- Seat/Occupant Model - Light Aircraft [SAE PAPER 850850] p 293 A86-38510

CREATININE
Urinary and hematological indices of hypohydration [AD-A165015] p 289 N86-27917

CREW STATIONS
Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) --- Russian book p 290 A86-38984

CULTURE TECHNIQUES
Biotechnica '85 International Congress for Biotechnology [AD-A165415] p 278 N86-26794

CYANIDES
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials [AD-A165034] p 277 N86-27866

CYCLIC AMP
Cyclic adenosine-3',5'-monophosphate and cyclic guanosine-3',5'-monophosphate in the blood plasma of mice injected with chemicals of different radioprotective efficiency p 276 A86-39718

D

DARK ADAPTATION
Effects of broad-banded eye protection on dark adaptation p 284 N86-26817

DATA BASES
Demographic and anthropometric assessment of US Army anthropometric data base [AD-A164637] p 295 N86-26838

DECISION MAKING
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time [AD-A165211] p 291 N86-26833
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions [NLR-TR-84037-U] p 292 N86-26835

DECOMPOSITION
Isotopic characterisation of prebiotic synthesis of organic material p 300 N86-26865

DECOMPRESSION SICKNESS
Human central hemodynamics during lower limb decompression p 286 N86-27887

DEHYDRATION
Urinary and hematological indices of hypohydration [AD-A165015] p 289 N86-27917

DEMOGRAPHY
Demographic and anthropometric assessment of US Army anthropometric data base [AD-A164637] p 295 N86-26838

DEOXYRIBONUCLEIC ACID
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873
Base pairing and base mis-pairing in nucleic acids p 304 N86-26881
Investigations with methanobacteria and with evolution of the genetic code p 306 N86-26890
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893

DESERTS
Microfossils in the Antarctic cold desert: Possible implications for Mars p 307 N86-26897
DIAGNOSIS
The healthy motivation to fly: No psychiatric diagnosis [AD-A164944] p 291 N86-26832
DIGITAL TECHNIQUES
Stanford Hardware Development Program p 309 N86-26910
DIPHOSPHATES
Effect of diphosphonates on bones of hypokinetic rats p 279 N86-27890
DISPLACEMENT
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces p 294 N86-26816
DIVING (UNDERWATER)
Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914
DOPA
The effect of radiation on the concentration and metabolism of dopamine in the rat brain p 276 A86-39722
DOSAGE
Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919
DWELL
Analytical techniques of pilot scanning behavior and their application [NASA-TP-2525] p 292 N86-27920

E

EARTH (PLANET)
The fossil record of evolution: Analysis of extinction p 308 N86-26901
EARTH ATMOSPHERE
Climatic consequences of very high CO2 levels in Earth's early atmosphere p 308 N86-26904
EARTH CRUST
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time p 304 N86-26882
EARTH MANTLE
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time p 304 N86-26882
EARTH-MOON SYSTEM
The lunar nodal tide and the distance to the Moon during the Precambrian era p 305 N86-26886
EDUCATION
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time [AD-A165211] p 291 N86-26833
ELECTRIC FIELDS
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923
ELECTRIC SPARKS
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
ELECTRICAL IMPEDANCE
Human body impedance and threshold currents for perception and pain for contact hazard analysis in the VLF-MF band p 281 A86-39598
ELECTROCARDIOGRAPHY
A practical attitude toward ventricular repolarization abnormalities in flight crews p 282 A86-39773
ELECTROENCEPHALOGRAPHY
The mechanisms of the effect of nonionizing radiation on an organism's sensory systems p 276 A86-39721
Effect of rhythmic photic interference on working electroencephalogram and efficiency of human movements p 292 N86-27883
ELECTROMAGNETIC FIELDS
Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study [AD-A165040] p 277 N86-27867
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923
ELECTROMAGNETIC RADIATION
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study [AD-A164653] p 282 N86-26798
EMOTIONAL FACTORS
Psychoemotional pilot stress prior to ejection and its role in appropriate performance p 292 N86-27881
Amino acid spectrum of human blood in the presence of emotional stress p 287 N86-27901
ENVIRONMENT EFFECTS
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863
Climatic consequences of very high CO2 levels in Earth's early atmosphere p 308 N86-26904
ENVIRONMENTAL CONTROL
Influence of shipboard environmental factors on conditioned reflex activity of experimental animals during a long voyage p 278 N86-27873
ENZYME ACTIVITY
Morphological and biochemical investigation of rat adrenocortical function during long-term hypokinesia p 279 N86-27889
Blood serum enzymes during 7-day water immersion p 287 N86-27902
ENZYMES
Cooperation of catalysts and templates p 301 N86-26871
Is the ATPase from halobacterium saccharovorum an evolutionary relic? p 305 N86-26891
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894
EPIDEMIOLOGY
A practical attitude toward ventricular repolarization abnormalities in flight crews p 282 A86-39773
Late biological effects from internal and external exposure [DE86-001181] p 278 N86-27868
EPINEPHRINE
Epinephrine-induced changes in muscle carbohydrate metabolism during exercise in male subjects p 280 A86-39092
ERYTHROCYTES
Phasic processes in kinetics of formed blood elements p 286 N86-27888
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916
ETIOLOGY
Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914
EUROPE
Effects of radiation health p 288 N86-27910
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Studies on accurate measurements and analyses of human olfactory evoked potentials [EL-863] p 288 N86-27907
EVOLUTION (DEVELOPMENT)
Development, growth and time --- biological model [CWI-CS-R8516] p 277 N86-26795
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria p 307 N86-26898
Microbial contributions to the Precambrian Earth p 307 N86-26899
The fossil record of evolution: Analysis of extinction p 308 N86-26901
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903
EXERCISE PHYSIOLOGY
Epinephrine-induced changes in muscle carbohydrate metabolism during exercise in male subjects p 280 A86-39092
Pulmonary gas exchange in humans during exercise at sea level p 281 A86-39095
Exercise conditioning increases rat myocardial calcium uptake p 276 A86-39097
Physiological profile of world-class high-altitude climbers p 281 A86-39098
Effects of muscle atrophy on motor control [NASA-CR-177201] p 288 N86-27913
EXHAUST GASES
Factors influencing carboxyhemoglobin stability [AD-A165032] p 289 N86-27918
EXHAUSTION
US Air Force combat psychiatry [AD-A165011] p 292 N86-27921
EXOBIOLOGY
The universal diagrams and life in the universe p 297 A86-38148
Aerospace Medicine and Biology: A continuing bibliography with indexes [NASA-SP-7011(285)] p 282 N86-26797
Second Symposium on Chemical Evolution and the Origin of Life [NASA-CP-2425] p 297 N86-26844
Observational exobiology p 298 N86-26850
A gas chromatograph experiment for a Titan entry probe p 299 N86-26856
Miniature metastable ionization detectors for exobiology flight experiments p 299 N86-26859
multiplex gas chromatography: A novel analytical technique for future planetary studies p 299 N86-26860
Exobiology experiment concepts for space station p 310 N86-27152
USSR report: Space Biology and Aerospace Medicine, no. 1, January - February 1986 [JPRS-USB-86-003] p 278 N86-27878
Aerospace Medicine and Biology: A Continuing Bibliography with Indexes [NASA-SP-7011(278)] p 287 N86-27905
EXPERIMENT DESIGN
Exobiology experiment concepts for space station p 310 N86-27152
EXPERT SYSTEMS
Mental models and problem solving with a knowledge-based expert system [AD-A165398] p 295 N86-26843
EXPOSURE
Physical endurance of rats during intensive and repeated exposure to stationary magnetic field p 279 N86-27894
EXTINCTION
The fossil record of evolution: Analysis of extinction p 308 N86-26901
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903
EXTRATERRESTRIAL ENVIRONMENTS
Cooperation of catalysts and templates p 301 N86-26871
EXTRATERRESTRIAL INTELLIGENCE
A decade of SETI observations p 308 N86-26905
An infrared search for extraterrestrial laser signals p 309 N86-26907
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization p 309 N86-26908
Overview of the NASA SETI Program p 309 N86-26909
Goldstone field test activities: Target search p 309 N86-26911
Goldstone field test activities: Sky survey p 310 N86-26912
JPL's role in the SETI program p 310 N86-26913
EXTRATERRESTRIAL LIFE
Universal protein ancestors from hydrogen cyanide and water --- extraterrestrial origins p 296 A86-38141
Panspermia - A modern astrophysical and biological approach p 296 A86-38142
The universal diagrams and life in the universe p 297 A86-38148
On the occurrence and appearance of galactic life forms - A thermodynamic approach p 297 A86-38150
EXTRATERRESTRIAL MATTER
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
EYE (ANATOMY)
Soft contact lens wear during +G(Z) acceleration [AD-A165013] p 289 N86-27915
EYE PROTECTION
Visual Protection and Enhancement [AGARD-CP-379] p 283 N86-26802
Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces p 294 N86-26816
Effects of broad-banded eye protection on dark adaptation p 284 N86-26817
Eye protection against intense light sources p 284 N86-26818
Calculations on technical requirements for protection devices against a nuclear light flash p 284 N86-26819
The application of diffraction optics techniques to laser eye protection p 284 N86-26821
Foveal flashes and human performance p 284 N86-26822
Permanent visual change associated with punctate foveal lesions p 284 N86-26823
EYEPIECES
New glasses for presbyopic pilots p 283 N86-26814
Contact lenses for pilots and aircrew in the services p 284 N86-26815

F

FABRICS
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials [AD-A165034] p 277 N86-27966
FALLOUT
Late biological effects from internal and external exposure [DE86-001181] p 278 N86-27868
FAST FOURIER TRANSFORMATIONS
The Berkeley Serendip Project p 309 N86-26906

FEAR OF FLYING
US Air Force combat psychiatry
[AD-A165011] p 292 N86-27921
FEEDBACK
Studies on visual information processing in retinal neurons
[EL-959] p 288 N86-27906
FEET (ANATOMY)
Method of demonstrating calcium in human foot by neutron activation of (alpha, N)-sources
p 267 N86-27899
FIELD OF VIEW
New glasses for presbyopic pilots
p 283 N86-26814
FIRES
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials
[AD-A165034] p 277 N86-27866
FLASH BLINDNESS
Calculations on technical requirements for protection devices against a nuclear light flash
p 284 N86-26819
Foveal flashes and human performance
p 284 N86-26822
FLIGHT CLOTHING
Methodology for integration testing of aircrew clothing and equipment
[AD-A165328] p 295 N86-26842
FLIGHT CREWS
A practical attitude toward ventricular repolarization abnormalities in flight crews p 282 A86-39773
Methodology for integration testing of aircrew clothing and equipment
[AD-A165328] p 295 N86-26842
Effects of atropine sulfate on aircrew performance
[AD-A165083] p 290 N86-27919
FLIGHT FATIGUE
US Air Force combat psychiatry
[AD-A165011] p 292 N86-27921
FLIGHT FITNESS
Flight fitness and a past myocardial infarction
p 281 A86-39772
FLIGHT SIMULATION
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] p 292 N86-26835
Distinctions in humoral control of metabolism with simulation of spaceflight factors p 266 N86-27884
FLIGHT STRESS (BIOLOGY)
Experimental and general theoretical research: Nature of circulatory regulation in pilots p 285 N86-27880
Psychoemotional pilot stress prior to ejection and its role in appropriate performance p 292 N86-27881
FLIGHT SURGEONS
US Air Force combat psychiatry
[AD-A165011] p 292 N86-27921
FLIGHT TESTS
Methodology for integration testing of aircrew clothing and equipment
[AD-A165328] p 295 N86-26842
FLIGHT TRAINING
Changes in Naval Aviation Basic Instrument flight training: An analysis
[AD-A164738] p 291 N86-26830
FLUX DENSITY
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials
[AD-A165034] p 277 N86-27866
FLYING PERSONNEL
Normal or pathological coronary status - Reflections and practical experiences for expertise with flight personnel
p 282 A86-39774
FOAMS
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials
[AD-A165034] p 277 N86-27866
FOCUSING
New glasses for presbyopic pilots
p 283 N86-26814
FOLDING STRUCTURES
Design and production of damage-resistant tray pack containers
[AD-A164595] p 294 N86-26837
FOREARM
Forearm skin and muscle vasoconstriction during lower body negative pressure p 280 A86-39093
FORMALDEHYDE
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26883
FOSSILS
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter
p 304 N86-26884
Recent progress in Precambrian paleobiology
p 305 N86-26887
Microfossils in the Antarctic cold desert: Possible implications for Mars p 307 N86-26897
The fossil record of evolution: Analysis of extinction
p 308 N86-26901
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903
FOVEA
Foveal flashes and human performance
p 284 N86-26822
Permanent visual change associated with punctate foveal lesions p 284 N86-26823
FREQUENCY SYNTHESIZERS
The Berkeley Serendip Project p 309 N86-26906
FURNACES
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials
[AD-A165034] p 277 N86-27866

G

GANGLIA
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164653] p 282 N86-26796
GAS CHROMATOGRAPHY
A gas chromatograph experiment for a Titan entry probe p 299 N86-26856
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies p 299 N86-26858
multiplex gas chromatography: A novel analytical technique for future planetary studies
p 299 N86-26860
GAS EXCHANGE
Pulmonary gas exchange in humans during exercise at sea level p 281 A86-39095
A fundamental problem in determining functional residual capacity or residual volume — of lungs
p 281 A86-39099
GASES
Direct spectrophotometric method of assaying ammonia concentration in gas environment of seeding chambers
p 280 N86-27900
GENETIC CODE
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873
A comparative study of prebiotic and present day translational models p 303 N86-26877
GENETICS
Investigations with methanobacteria and with evolution of the genetic code p 306 N86-26890
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-006] p 278 N86-27869
GEOCHEMISTRY
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time p 304 N86-26882
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments
p 304 N86-26883
The fossil record of evolution: Analysis of extinction
p 308 N86-26901
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903
GEOLOGY
The fossil record of evolution: Analysis of extinction
p 308 N86-26901
GEOMETRY
A comparative study of prebiotic and present day translational models p 303 N86-26877
GEOTEMPERATURE
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time p 304 N86-26882
GLUTATHIONE
Evolution of thiol protective systems in prokaryotes
p 307 N86-26896
GLYCOGENS
Collagen, lipid and glycogen content of rat skeletal muscles in recovery period after 15- and 30-day hypokinesia p 279 N86-27886
GLYCOLYSIS
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions p 302 N86-26876
GOGGLES
Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting p 294 N86-26807
GRAVITATION
Soft contact lens wear during +G(Z) acceleration
[AD-A165013] p 289 N86-27915
GRAVITATIONAL EFFECTS
Exobiology experiment concepts for space station
p 310 N86-27152
Soft contact lens wear during +G(Z) acceleration
[AD-A165013] p 289 N86-27915
GRAVITATIONAL PHYSIOLOGY
Hemodynamics of miniature swine during +Gz stress with and without anti-G support p 275 A86-39096
GREENHOUSE EFFECT
Climatic consequences of very high CO2 levels in Earth's early atmosphere p 306 N86-26904
GROWTH
Development, growth and time — biological model
[CWI-CS-R8516] p 277 N86-26795

H

HARDWARE
Goldstone field test activities: Target search
p 309 N86-26911
HAZARDS
Human body impedance and threshold currents for perception and pain for contact hazard analysis in the VLF-MF band p 281 A86-39598
HEALTH
Factors influencing carboxyhemoglobin stability
[AD-A165032] p 289 N86-27918
HEALTH PHYSICS
Biological effects of ionizing radiation
p 288 N86-27909
Effects of radiation health p 288 N86-27910
HEART FUNCTION
Exercise conditioning increases rat myocardial calcium uptake p 276 A86-39097
HEART RATE
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] p 283 N86-26800
HELICOPTER CONTROL
Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805
HELIUM IONS
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895
HELIUM-NEON LASERS
Changes in the carbohydrate energy metabolism in the rat brain under laser radiation p 276 A86-39719
HEMATOLOGY
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress
[AD-A165014] p 289 N86-27916
HEMATOPOIETIC SYSTEM
Macrophage structure and function
[AD-A163314] p 276 N86-26793
HEMODYNAMIC RESPONSES
Forearm skin and muscle vasoconstriction during lower body negative pressure p 280 A86-39093
Hemodynamics of miniature swine during +Gz stress with and without anti-G support p 275 A86-39096
Experimental and general theoretical research: Nature of circulatory regulation in pilots p 285 N86-27880
HEMODYNAMICS
Some human reactions during 7-day antiorthostatic hypokinesia p 286 N86-27885
Human central hemodynamics during lower limb decompression p 286 N86-27887
Phasic processes in kinetics of formed blood elements
p 286 N86-27888
HEMOLYSIS
Phasic processes in kinetics of formed blood elements
p 286 N86-27888
HETERODYNING
An infrared search for extraterrestrial laser signals
p 309 N86-26907
HIBERNATION
Study of brain biochemistry during hypothermia
p 285 N86-27875
HIGH ALTITUDE ENVIRONMENTS
Physiological profile of world-class high-altitude climbers p 281 A86-39098

HISTOGRAMS
Analytical techniques of pilot scanning behavior and their application
[NASA-TP-2525] p 292 N86-27920
HOLOGRAPHY
The application of diffraction optics techniques to laser eye protection p 284 N86-26821
HORMONE METABOLISMS
Distinctions in humoral control of metabolism with simulation of spaceflight factors p 286 N86-27884
HUMAN BEHAVIOR
Components of verbal intelligence
[AD-A163359] p 290 N86-26828
HUMAN BEINGS
Macrophage structure and function
[AD-A163314] p 276 N86-26793
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] p 282 N86-26799
Effects of cold exposure on thermal status of men and women p 285 N86-27874
Studies on accurate measurements and analyses of human olfactory evoked potentials
[EL-863] p 288 N86-27907
HUMAN BODY
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] p 283 N86-26801
HUMAN FACTORS ENGINEERING
Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) — Russian book p 290 A86-38964
Human factors: The Cinderella discipline in cockpit interface design p 294 N86-26825
Baseline experiments in teleoperator control
[NASA-TP-2547] p 294 N86-26836
Human factors in rule-based systems
[AD-A165309] p 295 N86-26840
Soldier-computer interface
[AD-A165326] p 295 N86-26841
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] p 295 N86-26843
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-008] p 278 N86-27869
Analytical techniques of pilot scanning behavior and their application
[NASA-TP-2525] p 292 N86-27920
HUMAN PATHOLOGY
Normal or pathological coronary status - Reflections and practical experiences for expertise with flight personnel p 282 A86-39774
HUMAN PERFORMANCE
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] p 282 N86-26799
Permanent visual change associated with punctate foveal lesions p 284 N86-26823
Effects of atropine sulfate on aircrew performance
[AD-A165063] p 290 N86-27919
HUMAN REACTIONS
Human thermoregulatory responses to cold air are altered by repeated cold water immersion p 281 A86-39094
Pulmonary gas exchange in humans during exercise at sea level p 281 A86-39095
Individual parameters in thermoregulatory control; a review — plasma diagnostics
[IZF-1985-26] p 283 N86-26801
HUMAN TOLERANCES
Regional tolerance to impact acceleration
[SAE PAPER 850852] p 293 A86-38512
HYDROCARBON COMBUSTION
Factors influencing carboxyhemoglobin stability
[AD-A165032] p 289 N86-27918
HYDROCYANIC ACID
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863
HYDROGEN
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894
HYDROGEN BONDS
Base pairing and base mis-pairing in nucleic acids p 304 N86-26881
HYPEROXIA
Factors influencing carboxyhemoglobin stability
[AD-A165032] p 289 N86-27918
HYPERTHERMIA
Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia p 278 N86-27877
HYPOKINESIA
Some human reactions during 7-day antiorthostatic hypokinesia p 296 N86-27885
Collagen, lipid and glycogen content of rat skeletal muscles in recovery period after 15- and 30-day hypokinesia p 279 N86-27886
Morphological and biochemical investigation of rat adrenocortical function during long-term hypokinesia p 279 N86-27889
Effect of diphosphonates on bones of hypokinetic rats p 279 N86-27890
HYPOTHERMIA
Human thermoregulatory responses to cold air are altered by repeated cold water immersion p 281 A86-39094
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] p 283 N86-26800
Study of brain biochemistry during hypothermia p 285 N86-27875
HYPOXIA
Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia p 278 N86-27877
Effect of dibasol and some of its imidazo analogues on animal tolerance to gravitational accelerations and dynamics of development of postischemic cerebrovascular phenomena p 279 N86-27896

I

IDENTIFYING
Macrophage structure and function
[AD-A163314] p 276 N86-26793
ILLUMINATING
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting p 294 N86-26807
IMAGE ENHANCEMENT
Visual Protection and Enhancement
[AGARD-CP-379] p 283 N86-26802
IMAGE RESOLUTION
Interaction of image characteristics of stereoscopic forms during depth perception
[AD-A164895] p 291 N86-26831
IMAGING TECHNIQUES
Aeromedical lessons learned with night vision devices p 283 N86-26810
IMIDES
Effect of dibasol and some of its imidazo analogues on animal tolerance to gravitational accelerations and dynamics of development of postischemic cerebrovascular phenomena p 279 N86-27896
IMMOBILIZATION
Restraint system for waking Macaca mulatta monkeys during postural tests p 280 N86-27898
IMMUNITY
Macrophage structure and function
[AD-A163314] p 276 N86-26793
T and B components of immunity in the presence of acute mountain sickness p 286 N86-27892
IMMUNOLOGY
T and B components of immunity in the presence of acute mountain sickness p 286 N86-27892
IMPACT ACCELERATION
Regional tolerance to impact acceleration
[SAE PAPER 850852] p 293 A86-38512
IMPACT DAMAGE
The fossil record of evolution: Analysis of extinction p 308 N86-26901
IMPACT TESTS
Regional tolerance to impact acceleration
[SAE PAPER 850852] p 293 A86-38512
IMPACT TOLERANCES
Regional tolerance to impact acceleration
[SAE PAPER 850852] p 293 A86-38512
INFORMATION TRANSFER
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts p 301 N86-26869
INFRARED ASTRONOMY SATELLITE
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization p 309 N86-26908
INFRARED RADIATION
An infrared search for extraterrestrial laser signals p 309 N86-26907
INFRARED SPECTRA
Infrared spectral identification of complex organic molecules in interstellar grains p 296 A86-38140
INHIBITORS
Effects of atropine sulfate on aircrew performance
[AD-A165063] p 290 N86-27919
INTELLIGENCE
Components of verbal intelligence
[AD-A163359] p 290 N86-26828
INTERFACES
Soldier-computer interface
[AD-A165326] p 295 N86-26841
INTERNATIONAL COOPERATION
Effects of radiation health p 288 N86-27910
INTERPLANETARY DUST
Characterization of biogenic elements in interplanetary dust particles p 297 N86-26846
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds p 297 N86-26847
INTERSTELLAR CHEMISTRY
Prebiotic matter in interstellar molecules p 296 A86-38138
Recent observations of organic molecules in nearby cold, dark interstellar clouds p 296 A86-38139
Infrared spectral identification of complex organic molecules in interstellar grains p 296 A86-38140
No valid evidence exists for interstellar proteins, bacteria, etc p 296 A86-38143
INTERSTELLAR GAS
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains p 298 N86-26849
INTERSTELLAR MATTER
Infrared spectral identification of complex organic molecules in interstellar grains p 296 A86-38140
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds p 297 N86-26847
Interstellar isomers p 298 N86-26848
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains p 298 N86-26849
Observational exobiology p 298 N86-26850
INTRAMOLECULAR STRUCTURES
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873
Stereoselective aminoacylation of RNA p 302 N86-26875
IONIZATION
Miniature metastable ionization detectors for exobiology flight experiments p 299 N86-26859
IONIZING RADIATION
The effect of radiation on the concentration and metabolism of dopamine in the rat brain p 276 A86-39722
Biological effects of ionizing radiation p 288 N86-27909
IONOSPHERIC DRIFT
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique p 300 N86-26861
IONS
Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study
[AD-A165040] p 277 N86-27867
IRON
Isotopic, petrologic and biogeochemical investigations of banded iron-formations p 305 N86-26885
IRON COMPOUNDS
Origin of life and iron-rich clays p 300 N86-26866
ISOMERS
Interstellar isomers p 298 N86-26848
ISOTOPES
Isotopic characterisation of prebiotic synthesis of organic material p 300 N86-26865
ITALY
Operating radiation protection: Physical aspects p 288 N86-27911
Operating radiation protection: Medical aspects p 288 N86-27912

K

KEROGEN
Isotopic characterisation of prebiotic synthesis of organic material p 300 N86-26865
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter p 304 N86-26884

L

LABORATORY EQUIPMENT
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] p 276 N86-26794
LACTATES
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress
[AD-A165014] p 289 N86-27916

LASER DAMAGE
Eye protection against intense light sources
p 284 N86-26818
The application of diffraction optics techniques to laser eye protection p 284 N86-26821
LEARNING
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] p 291 N86-26833
Initial skill learning: An analysis of how elaborations facilitate the three components
[AD-A165137] p 292 N86-27922
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-003748] p 310 N86-27923
LEARNING THEORY
Components of verbal intelligence
[AD-A163359] p 290 N86-26828
Acquiring procedural skills from lesson sequences
[AD-A164580] p 291 N86-26829
LESIONS
Permanent visual change associated with punctate foveal lesions p 284 N86-26823
Experiments with developing plants aboard Salyut-5, Salyut-6 and Salyut-7 orbital stations
p 279 N86-27891
LEUKOCYTES
Macrophage structure and function
[AD-A163314] p 276 N86-26793
LEVEL (QUANTITY)
Effects of atropine sulfate on aircrew performance
[AD-A165063] p 290 N86-27919
LIFE SCIENCES
Life science opportunities in the Space Station
p 275 A86-37855
In the beginning . . . there was clay?
p 297 A86-38624
Exobiology experiment concepts for space station
p 310 N86-27152
USSR Space Life Sciences Digest, Issue 6
[NASA-CR-3922(07)] p 277 N86-27864
LIGHT ADAPTATION
Calculations on technical requirements for protection devices against a nuclear light flash
p 284 N86-26819
Effect of rhythmic photic interference on working electroencephalogram and efficiency of human movements p 292 N86-27883
LIGHT AIRCRAFT
Validation of SOM-LA occupant response --- Seat/Occupant Model - Light Aircraft
[SAE PAPER 850850] p 293 A86-38510
LIGHT SOURCES
Eye protection against intense light sources
p 284 N86-26818
LIGHTNING
A gas chromatograph experiment for a Titan entry probe p 299 N86-26856
LINGUISTICS
Components of verbal intelligence
[AD-A163359] p 290 N86-26828
LIPIDS
Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882
Collagen, lipid and glycogen content of rat skeletal muscles in recovery period after 15- and 30-day hypokinesia p 279 N86-27886
LOADING OPERATIONS
Design and production of damage-resistant tray pack containers
[AD-A164595] p 294 N86-26837
LONG DURATION SPACE FLIGHT
USSR report: Space Biology and Aerospace Medicine, no. 1, January - February 1986
[JPRS-USB-86-003] p 278 N86-27878
Prospects for using ultraviolet radiation in long-term spaceflights p 285 N86-27879
LOSSES
Effects of atropine sulfate on aircrew performance
[AD-A165063] p 290 N86-27919
LOWER BODY NEGATIVE PRESSURE
Forearm skin and muscle vasoconstriction during lower body negative pressure p 280 A86-39093
LUMINOUS INTENSITY
Eye protection against intense light sources
p 284 N86-26818
LUNAR GRAVITATIONAL EFFECTS
The lunar nodal tide and the distance to the Moon during the Precambrian era p 305 N86-26886
LUNAR TIDES
The lunar nodal tide and the distance to the Moon during the Precambrian era p 305 N86-26886
LUNG MORPHOLOGY
A fundamental problem in determining functional residual capacity or residual volume --- of lungs
p 281 A86-39099
LUNGS
Concerning barotrauma of the lungs-translation
[AD-A165006] p 299 N86-27914
LYMPHOCYTES
Macrophage structure and function
[AD-A163314] p 276 N86-26793
T and B components of immunity in the presence of acute mountain sickness p 286 N86-27892

M

MACROPHAGES
Macrophage structure and function
[AD-A163314] p 276 N86-26793
MAGNETIC FIELDS
Physical endurance of rats during intensive and repeated exposure to stationary magnetic field
p 279 N86-27894
MALES
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] p 283 N86-26800
MAN MACHINE SYSTEMS
Cockpit automation requirements derived from mission functions data p 293 N86-26318
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319
Human factors: The Cinderella discipline in cockpit interface design p 294 N86-26825
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] p 292 N86-26835
Baseline experiments in teleoperator control
[NASA-TP-2547] p 294 N86-26836
Human factors in rule-based systems
[AD-A165309] p 295 N86-26840
Soldier-computer interface
[AD-A165326] p 295 N86-26841
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] p 295 N86-26843
MANIPULATORS
Baseline experiments in teleoperator control
[NASA-TP-2547] p 294 N86-26836
MANUALS
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] p 291 N86-26833
MARINE BIOLOGY
Are interpretations of ancient marine temperatures constrained by the presence of ancient marine organisms? p 276 A86-39470
MARINE ENVIRONMENTS
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903
MARKETING
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] p 276 N86-26794
MARS (PLANET)
Microfossils in the Antarctic cold desert: Possible implications for Mars p 307 N86-26897
MASS RATIOS
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] p 282 N86-26799
MASS SPECTROSCOPY
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165325] p 282 N86-26799
MATERIALS HANDLING
Design and production of damage-resistant tray pack containers
[AD-A164595] p 294 N86-26837
MEASURING INSTRUMENTS
Miniature metastable ionization detectors for exobiology flight experiments p 299 N86-26859
MEDICAL PERSONNEL
Operating radiation protection: Medical aspects
p 288 N86-27912
MEMBRANES
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study
[AD-A164853] p 282 N86-26798
MEMORY
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] p 291 N86-26833
MENTAL HEALTH
The healthy motivation to fly: No psychiatric diagnosis
[AD-A164944] p 291 N86-26832
MENTAL PERFORMANCE
Human factors in rule-based systems
[AD-A165309] p 295 N86-26840
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] p 295 N86-26843
Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882
Effect of rhythmic photic interference on working electroencephalogram and efficiency of human movements p 292 N86-27883
METABOLISM
An anaerobic shift in energy metabolism in the mouse brain during recovery from acute radiation sickness
p 276 A86-39720
Oxygen and the evolution of metabolic pathways
p 307 N86-26895
Effect of different doses of ultraviolet radiation on vitamin levels in man p 287 N86-27893
Blood serum enzymes during 7-day water immersion
p 287 N86-27902
METEORITES
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
Isotopic characterisation of prebiotic synthesis of organic material p 300 N86-26865
Origin of life and iron-rich clays p 300 N86-26866
MEXICO
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: Implications for stromatolite S13C values
p 308 N86-26900
MICROGRAVITY APPLICATIONS
Life science opportunities in the Space Station
p 275 A86-37855
MICROORGANISMS
Are interpretations of ancient marine temperatures constrained by the presence of ancient marine organisms? p 276 A86-39470
The principle of cooperation and life's origin and evolution p 303 N86-26880
Recent progress in Precambrian paleobiology
p 305 N86-26887
Microfossils in the Antarctic cold desert: Possible implications for Mars p 307 N86-26897
Microbial contributions to the Precambrian Earth
p 307 N86-26899
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: Implications for stromatolite S13C values
p 308 N86-26900
MICROWAVE FREQUENCIES
An infrared search for extraterrestrial laser signals
p 309 N86-26907
Overview of the NASA SETI Program
p 309 N86-26909
JPL's role in the SETI program p 310 N86-26913
MICROWAVES
The mechanisms of the effect of nonionizing radiation on an organism's sensory systems p 276 A86-39721
Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study
[AD-A165040] p 277 N86-27867
MILITARY PSYCHOLOGY
US Air Force combat psychiatry
[AD-A165011] p 292 N86-27921
MINERALOGY
Paleosols and the chemical evolution of the atmosphere p 301 N86-26870
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 308 N86-26903
MINERALS
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts
p 301 N86-26869
MINIATURE ELECTRONIC EQUIPMENT
Miniature metastable ionization detectors for exobiology flight experiments p 299 N86-26859
MISSION PLANNING
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319
MODELS
Biotechnica '85 International Congress for Biotechnology
[AD-A165415] p 276 N86-26794
Mental models and problem solving with a knowledge-based expert system
[AD-A165398] p 295 N86-26843
MOLECULAR BIOLOGY
A comparative study of prebiotic and present day translational models p 303 N86-26877
MOLECULAR CLOUDS
Prebiotic matter in interstellar molecules
p 296 A86-38138
Recent observations of organic molecules in nearby cold, dark interstellar clouds p 296 A86-38139

Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds p 297 N86-26847
Interstellar isomers p 298 N86-26848

MOLECULAR INTERACTIONS
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions p 302 N86-26872
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873
Stereoselective aminoacylation of RNA p 302 N86-26875
Protobiological informatoin, bidirectional recognition and reverse translation p 303 N86-26878

MOLECULAR STRUCTURE
Base pairing and base mis-pairing in nucleic acids p 304 N86-26881
Higher-order structure of rRNA p 305 N86-26888
The rRNA evolution and procaryotic phylogeny p 305 N86-26889

MOLECULES
Cooperation of catalysts and templates p 301 N86-26871
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions p 302 N86-26872
Molecular replication p 302 N86-26874

MONKEYS
Commentary on results of biological satellite program p 278 N86-27871

MONOMERS
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids p 301 N86-26868

MONTMORILLONITE
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids p 301 N86-26868

MORPHOLOGY
Macrophage structure and function [AD-A163314] p 276 N86-26793
Morphological and biochemical investigation of rat adrenocortical function during long-term hypokinesia p 279 N86-27889

MOTIVATION
The healthy motivation to fly: No psychiatric diagnosis [AD-A164944] p 291 N86-26832

MUSCULAR FUNCTION
Epinephrine-induced changes in muscle carbohydrate metabolism during exercise in male subjects p 280 A86-39092
Forearm skin and muscle vasoconstriction during lower body negative pressure p 280 A86-39093

MUSCULAR TONUS
Effects of muscle atrophy on motor control [NASA-CR-177201] p 288 N86-27913

MUSCULOSKELETAL SYSTEM
Collagen, lipid and glycogen content of rat skeletal muscles in recovery period after 15- and 30-day hypokinesia p 279 N86-27886

MYOCARDIAL INFARCTION
Flight fitness and a past myocardial infarction p 281 A86-39772

MYOCARDIUM
Exercise conditioning increases rat myocardial calcium uptake p 276 A86-39097

N

NAP-OF-THE-EARTH NAVIGATION
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319

NASA PROGRAMS
Overview of the NASA SETI Program p 309 N86-26909

Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study [AD-A165040] p 277 N86-27887

NEURONS
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study [AD-A164653] p 282 N86-26798
Studies on information processing mechanisms in the central visual system of the cat [EL-861] p 277 N86-27865
Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia p 278 N86-27877
Studies on visual information processing in retinal neurons [EL-859] p 288 N86-27906

NEUROPHYSIOLOGY
Studies on information processing mechanisms in the central visual system of the cat [EL-861] p 277 N86-27865
Studies on visual information processing in retinal neurons [EL-859] p 288 N86-27906

NEUROSES
US Air Force combat psychiatry [AD-A165011] p 292 N86-27921

NEUTRON ACTIVATION ANALYSIS
Method of demonstrating calcium in human foot by neutron activation of (alpha, N)-sources p 287 N86-27899

NIGHT FLIGHTS (AIRCRAFT)
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319
Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805

NIGHT VISION
Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting p 294 N86-26807
Aeromedical lessons learned with night vision devices p 283 N86-26810
Effects of broad-banded eye protection on dark adaptation p 284 N86-26817

NITROGEN
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments p 304 N86-26883

NUCLEAR EXPLOSIONS
Late biological effects from internal and external exposure [DE86-001181] p 278 N86-27868

NUCLEAR MEDICINE
Elements of Radiation Protection [ISS-L-84/7] p 288 N86-27908

NUCLEIC ACIDS
Syntnesis and analysis in studies of chemical evolution p 300 N86-26864
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions p 302 N86-26872
A comparative study of prebiotic and present day translational models p 303 N86-26877

NUCLEOTIDES
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids p 301 N86-26868
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts p 301 N86-26869
Cooperation of catalysts and templates p 301 N86-26871
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873
Molecular replication p 302 N86-26874
Protobiological informatoin, bidirectional recognition and reverse translation p 303 N86-26878

O

OCEAN SURFACE
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796

OCEAN TEMPERATURE
Are interpretations of ancient marine temperatures constrained by the presence of ancient marine organisms? p 276 A86-39470

OCEANS
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863

OCULOMETERS
Analytical techniques of pilot scanning behavior and their application [NASA-TP-2525] p 292 N86-27920

OLFACTORY PERCEPTION
Studies on accurate measurements and analyses of human olfactory evoked potentials [EL-863] p 288 N86-27907

OPERATOR PERFORMANCE
Foveal flashes and human performance p 284 N86-26822
Driving performance the day after use of loprazolam, flunitrazepem and placebo [VK-83-04] p 290 N86-26826
The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance [VK-83-05] p 290 N86-26827
Flurazepam HCL's residual (hangover) effects upon actual driving performance [VK-83-02] p 291 N86-26834
Sweating reflex in complex of methods for evaluating operator efficiency p 285 N86-27872
Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882

OPHTHALMOLOGY
Particular problems of airworthiness from an ophthalmological view p 283 N86-26812

ORBITAL SPACE STATIONS
Exobiology experiment concepts for space station p 310 N86-27152

ORGANIC CHEMISTRY
Recent observations of organic molecules in nearby cold, dark interstellar clouds p 296 A86-38139
The organic aerosols of Titan p 298 N86-26852

ORGANIC COMPOUNDS
Infrared spectral identification of complex organic molecules in interstellar grains p 296 A86-38140
Universal protein ancestors from hydrogen cyanide and water --- extraterrestrial origins p 296 A86-38141

ORGANIC MATERIALS
Design and production of damage-resistant tray pack containers [AD-A164595] p 294 N86-26837
Isotopic characterisation of prebiotic synthesis of organic material p 300 N86-26865
Origin of life and iron-rich clays p 300 N86-26866

ORTHOSTATIC TOLERANCE
Some human reactions during 7-day antiorthostatic hypokinesia p 286 N86-27885

OSMOSIS
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria p 307 N86-26898

OSTEOPOROSIS
Effect of diphosphonates on bones of hypokinetic rats p 279 N86-27890

OXALIC ACID
Origin of life and iron-rich clays p 300 N86-26866

OXIDATION
Evolution of thiol protective systems in prokaryotes p 307 N86-26896
Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882

OXIDATION-REDUCTION REACTIONS
Paleosols and the chemical evolution of the atmosphere p 301 N86-26870
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893

OXYGEN
Oxygen and the evolution of metabolic pathways p 307 N86-26895
Intensity of photosynthesis in closteriopsis acicular var. africana Hind as a function of oxygen concentration in the atmosphere p 280 N86-27903

OXYGEN CONSUMPTION
An anaerobic shift in energy metabolism in the mouse brain during recovery from acute radiation sickness p 276 A86-39720
Perceptual and physiological responses during exercise in cool and cold water [AD-A165491] p 283 N86-26800
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916

OXYHEMOGLOBIN
Factors influencing carboxyhemoglobin stability [AD-A165032] p 289 N86-27918

P

PACKAGING
Design and production of damage-resistant tray pack containers [AD-A164595] p 294 N86-26837

PAIN
Human body impedance and threshold currents for perception and pain for contact hazard analysis in the VLF-MF band p 281 A86-39598

PALEOBIOLOGY
Some implications of mass extinction for the evolution of complex life p 275 A86-38147
Are interpretations of ancient marine temperatures constrained by the presence of ancient marine organisms? p 276 A86-39470
Boundary conditions for the paleoenvironment: Chemical and Physical Processes in dense interstellar clouds p 297 N86-26847
Isotopic, petrologic and biogeochemical investigations of banded iron-formations p 305 N86-26885

PALEONTOLOGY

Recent progress in Precambrian paleobiology p 305 N86-26887

PALEONTOLOGY
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter p 304 N86-26884
The lunar nodal tide and the distance to the Moon during the Precambrian era p 305 N86-26886
The fossil record of evolution: Analysis of extinction p 308 N86-26901

PANSPERMIA
Panspermia - A modern astrophysical and biological approach p 296 A86-38142

PATHOGENESIS
Reproductive capacity of microflora on polymers used in sealed environments p 280 N86-27897

PATTERN RECOGNITION
Overview of the NASA SETI Program p 309 N86-26909
Goldstone field test activities: Target search p 309 N86-26911

PEPTIDES
Cooperation of catalysts and templates p 301 N86-26871
A comparative study of prebiotic and present day translational models p 303 N86-26877
Protobiological informatoin, bidirectional recognition and reverse translation p 303 N86-26878

PERFORMANCE TESTS
Goldstone field test activities: Target search p 309 N86-26911

PERIODIC VARIATIONS
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902

PERMEABILITY
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26839

PERSONALITY
The healthy motivation to fly: No psychiatric diagnosis [AD-A164944] p 291 N86-26832

PERSONNEL
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26839
Soldier-computer interface [AD-A165326] p 295 N86-26841
Factors influencing carboxyhemoglobin stability [AD-A165032] p 289 N86-27918

PETROLOGY
Isotopic, petrologic and biogeochemical investigations of banded iron-formations p 305 N86-26885

PHOTICS
Effect of rhythmic photic interference on working electroencephalogram and efficiency of human movements p 292 N86-27883

PHOTOCHEMICAL REACTIONS
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres p 298 N86-26853
A gas chromatograph experiment for a Titan entry probe p 299 N86-26856
Photochemical reactions of various model protocell systems p 303 N86-26879
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium p 306 N86-26892

PHOTOLYSIS
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains p 298 N86-26849

PHOTOOXIDATION
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894

PHOTOSENSITIVITY
Foveal flashes and human performance p 284 N86-26822

PHOTOSYNTHESIS
Photochemical reactions of various model protocell systems p 303 N86-26879
The principle of cooperation and life's origin and evolution p 303 N86-26880
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria p 307 N86-26898
Intensity of photosynthesis in closteriopsis acicular var. africana Hind as a function of oxygen concentration in the atmoophere p 280 N86-27903

PHYSICAL EXERCISE
Perceptual and physiological responses during exercise in cool and cold water [AD-A165491] p 283 N86-26800
Distinctions in humoral control of metabolism with simulation of spaceflight factors p 286 N86-27884

PHYSICAL FACTORS
Individual parameters in thermoregulatory control; a review — plasma diagnostics [IZF-1985-26] p 283 N86-26801
Effects of cold exposure on thermal status of men and women p 285 N86-27874

PHYSICAL FITNESS
Fluid-Electrolyte-Mineral interrelations as affecting work performance [AD-A165325] p 282 N86-26799
Physical endurance of rats during intensive and repeated exposure to stationary magnetic field p 279 N86-27894

PHYSIOCHEMISTRY
Changes in the carbohydrate energy metabolism in the rat brain under laser radiation p 276 A86-39719
An anaerobic shift in energy metabolism in the mouse brain during recovery from acute radiation sickness p 276 A86-39720
The effect of radiation on the concentration and metabolism of dopamine in the rat brain p 276 A86-39722

PHYSIOLOGICAL EFFECTS
Cyclic adenosine-3',5'-monophosphate and cyclic guanosine-3',5'-monophosphate in the blood plasma of mice injected with chemicals of different radioprotective efficiency p 276 A86-39718
Changes in the carbohydrate energy metabolism in the rat brain under laser radiation p 276 A86-39719
The mechanisms of the effect of nonionizing radiation on an organism's sensory systems p 276 A86-39721
The effect of radiation on the concentration and metabolism of dopamine in the rat brain p 276 A86-39722
Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia p 278 N86-27877

PHYSIOLOGICAL FACTORS
Evolutionary significance of osmoregulatory mechanisms in cyanobacteria p 307 N86-26898

PHYSIOLOGICAL RESPONSES
Perceptual and physiological responses during exercise in cool and cold water [AD-A165491] p 283 N86-26800
Individual parameters in thermoregulatory control; a review — plasma diagnostics [IZF-1985-26] p 283 N86-26801
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26839
Sweating reflex in complex of methods for evaluating operator efficiency p 285 N86-27872
Some human reactions during 7-day antiorthostatic hypokinesia p 286 N86-27885
Phasic processes in kinetics of formed blood elements p 286 N86-27888
Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919

PHYSIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-008] p 278 N86-27869
Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876

PIGMENTS
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium p 306 N86-26892
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894

PILOT PERFORMANCE
The stress syndrome — effects on pilot performance p 290 A86-37276
Particular problems of airworthiness from an ophthalmological view p 283 N86-26812
Contact lenses for pilots and aircrew in the services p 284 N86-26815
Human factors: The Cinderella discipline in cockpit interface design p 294 N86-26825
Changes in Naval Aviation Basic Instrument flight training: An analysis [AD-A164736] p 291 N86-26830
A model and experimental analysis of pilot decision making behavior for various automatic approach conditions [NLR-TR-84037-U] p 292 N86-26835
Psychoemotional pilot stress prior to ejection and its role in appropriate performance p 292 N86-27881
Analytical techniques of pilot scanning behavior and their application [NASA-TP-2525] p 292 N86-27920

PILOT TRAINING
Changes in Naval Aviation Basic Instrument flight training: An analysis [AD-A164738] p 291 N86-26830
Analytical techniques of pilot scanning behavior and their application [NASA-TP-2525] p 292 N86-27920

PILOTS (PERSONNEL)
US Air Force combat psychiatry [AD-A165011] p 292 N86-27921

PLANETARY ATMOSPHERES
The organic aerosols of Titan p 298 N86-26852
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres p 298 N86-26853

PLANETARY EVOLUTION
Second Symposium on Chemical Evolution and the Origin of Life [NASA-CP-2425] p 297 N86-26844
Climatic consequences of very high CO2 levels in Earth's early atmosphere p 308 N86-26904

PLANT STRESS
Experiments with developing plants aboard Salyut-5, Salyut-6 and Salyut-7 oribital stations p 279 N86-27891

PLANTS (BOTANY)
Paleosols and the chemical evolution of the atmosphere p 301 N86-26870
Experiments with developing plants aboard Salyut-5, Salyut-6 and Salyut-7 oribital stations p 279 N86-27891
Reproductive capacity of microflora on polymers used in sealed environments p 280 N86-27897

PLASMA DYNAMICS
Fluid-Electrolyte-Mineral interrelations as affecting work performance [AD-A165325] p 282 N86-26799

PLATINUM
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894

POLARIZED LIGHT
Astronomical sources of circularly polarized light and their role in determining molecular chirality on earth p 297 A86-38144

POLLUTION TRANSPORT
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796

POLYMERS
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids p 301 N86-26868

POLYPEPTIDES
Further work on sodium montmorillonite as catalyst for the polymerization of activated amino acids p 301 N86-26868

POPULATIONS
Effects of muscle atrophy on motor control [NASA-CR-177201] p 288 N86-27913

PORPHYRINS
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894

POSTURE
Restraint system for waking Macaca mulatta monkeys during postural tests p 280 N86-27898

POTASSIUM ISOTOPES
Fluid-Electrolyte-Mineral interrelations as affecting work performance [AD-A165325] p 282 N86-26799

POWER SPECTRA
The Berkeley Serendip Project p 309 N86-26906

PRECAMBRIAN PERIOD
The Precambrian evolution of terrestrial life p 275 A86-38145
The lunar nodal tide and the distance to the Moon during the Precambrian era p 305 N86-26886
Recent progress in Precambrian paleobiology p 305 N86-26887

PRESBYOPIA
New glasses for presbyopic pilots p 283 N86-26814

PRESSURE SUITS
Hemodynamics of miniature swine during +Gz stress with and without anti-G support p 275 A86-39096

PRIMATES
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923

PRIMITIVE EARTH ATMOSPHERE
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
Cooperation of catalysts and templates p 301 N86-26871
Molecular replication p 302 N86-26874

Photochemical reactions of various model protocell systems p 303 N86-26879
Carbon exchange between the mantle and the crust and its effect upon the atmosphere: Today compared to Archean time p 304 N86-26882
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments p 304 N86-26883
Isotopic, petrologic and biogeochemical investigations of banded iron-formations p 305 N86-26885
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894
Oxygen and the evolution of metabolic pathways p 307 N86-26895

PROBLEM SOLVING
Human factors in rule-based systems [AD-A165309] p 295 N86-26840
Mental models and problem solving with a knowledge-based expert system [AD-A165398] p 295 N86-26843

PROCEDURES
Acquiring procedural skills from lesson sequences [AD-A164580] p 291 N86-26829

PROJECT SETI
Second Symposium on Chemical Evolution and the Origin of Life [NASA-CP-2425] p 297 N86-26844
A decade of SETI observations p 308 N86-26905
An infrared search for extraterrestrial laser signals p 309 N86-26907
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization p 309 N86-26908
Overview of the NASA SETI Program p 309 N86-26909
Stanford Hardware Development Program p 309 N86-26910
Goldstone field test activities: Target search p 309 N86-26911
Goldstone field test activities: Sky survey p 310 N86-26912
JPL's role in the SETI program p 310 N86-26913

PROPELLANTS
Factors influencing carboxyhemoglobin stability [AD-A165032] p 289 N86-27918

PROPHYLAXIS
Lactobacteria and prophylaxis in space p 285 N86-27870

PROTECTIVE CLOTHING
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26839
Methodology for integration testing of aircrew clothing and equipment [AD-A165328] p 295 N86-26842

PROTEIN SYNTHESIS
Universal protein ancestors from hydrogen cyanide and water — extraterrestrial origins p 296 A86-38141
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873

PROTEINS
No valid evidence exists for interstellar proteins, bacteria, etc p 296 A86-38143
Macrophage structure and function [AD-A163314] p 276 N86-26793
A comparative study of prebiotic and present day translational models p 303 N86-26877
Protobiological informatoin, bidirectional recognition and reverse translation p 303 N86-26878
Investigations with methanobacteria and with evolution of the genetic code p 306 N86-26890
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium p 306 N86-26892
Thioredoxins in evolutionarily primitive organisms p 306 N86-26893
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916

PROTOBIOLOGY
Prebiotic matter in interstellar molecules p 296 A86-38138

PROTON IRRADIATION
Radioprotective and therapeutic efficacy of carrageenan against proton radiation p 287 N86-27904

PROTONS
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895

PROTOTYPES
Clay energetics in chemical evolution p 301 N86-26867

PROVING
Baseline experiments in teleoperator control [NASA-TP-2547] p 294 N86-26836

PSYCHIATRY
US Air Force combat psychiatry [AD-A165011] p 292 N86-27921

PSYCHOLOGICAL EFFECTS
Studies on accurate measurements and analyses of human olfactory evoked potentials [EL-863] p 288 N86-27907

PSYCHOLOGICAL FACTORS
The healthy motivation to fly: No psychiatric diagnosis [AD-A164944] p 291 N86-26832

PSYCHOLOGICAL TESTS
Components of verbal intelligence [AD-A163359] p 290 N86-26828

PSYCHOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-USB-86-008] p 278 N86-27869
Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876

PSYCHOMOTOR PERFORMANCE
Driving performance the day after use of loprazolam, flunitrazepem and placebo [VK-83-04] p 290 N86-26826
Flurazepam HCL's residual (hangover) effects upon actual driving performance [VK-83-02] p 291 N86-26834
Psychoemotional pilot stress prior to ejection and its role in appropriate performance p 292 N86-27881

PSYCHOPHYSIOLOGY
Sweating reflex in complex of methods for evaluating operator efficiency p 285 N86-27872

PSYCHOTROPIC DRUGS
The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance [VK-83-05] p 290 N86-26827

PYROLYSIS
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter p 304 N86-26884

Q

Q FACTORS
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895

R

RADIATION DAMAGE
Biological effects of ionizing radiation p 288 N86-27909

RADIATION DOSAGE
USSR report: Space Biology and Aerospace Medicine, no. 1, January - February 1986 [JPRS-USB-86-003] p 278 N86-27878
Effect of different doses of ultraviolet radiation on vitamin levels in man p 287 N86-27893
Method of demonstrating calcium in human foot by neutron activation of (alpha, N)-sources p 287 N86-27899
Effects of radiation health p 288 N86-27910
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923

RADIATION EFFECTS
Changes in the carbohydrate energy metabolism in the rat brain under laser radiation p 276 A86-39719
The mechanisms of the effect of nonionizing radiation on an organism's sensory systems p 276 A86-39721
The effect of radiation on the concentration and metabolism of dopamine in the rat brain p 276 A86-39722
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study [AD-A164653] p 282 N86-26798
Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study [AD-A165040] p 277 N86-27867
Prospects for using ultraviolet radiation in long-term spaceflights p 285 N86-27879
Effect of different doses of ultraviolet radiation on vitamin levels in man p 287 N86-27893
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-003748] p 310 N86-27923

RADIATION HAZARDS
Calculations on technical requirements for protection devices against a nuclear light flash p 284 N86-26819
Elements of Radiation Protection [ISS-L-84/7] p 288 N86-27908
Effects of radiation health p 288 N86-27910
Operating radiation protection: Physical aspects p 288 N86-27911
Operating radiation protection: Medical aspects p 288 N86-27912

RADIATION INJURIES
Late biological effects from internal and external exposure [DE86-001181] p 278 N86-27868

RADIATION PROTECTION
Radioprotective and therapeutic efficacy of carrageenan against proton radiation p 287 N86-27904
Elements of Radiation Protection [ISS-L-84/7] p 288 N86-27908
Operating radiation protection: Physical aspects p 288 N86-27911
Operating radiation protection: Medical aspects p 288 N86-27912

RADIATION SICKNESS
An anaerobic shift in energy metabolism in the mouse brain during recovery from acute radiation sickness p 276 A86-39720

RADIATION THERAPY
Radioprotective and therapeutic efficacy of carrageenan against proton radiation p 287 N86-27904

RADIO COMMUNICATION
A decade of SETI observations p 308 N86-26905
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization p 309 N86-26908
JPL's role in the SETI program p 310 N86-26913

RADIO FREQUENCY INTERFERENCE
Goldstone field test activities: Sky survey p 310 N86-26912

RADIO SIGNALS
A decade of SETI observations p 308 N86-26905
The Berkeley Serendip Project p 309 N86-26906

RADIO TELESCOPES
A decade of SETI observations p 308 N86-26905
The Berkeley Serendip Project p 309 N86-26906
Overview of the NASA SETI Program p 309 N86-26909

RADIOBIOLOGY
An anaerobic shift in energy metabolism in the mouse brain during recovery from acute radiation sickness p 276 A86-39720
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895

RATS
Influence of shipboard environmental factors on conditioned reflex activity of experimental animals during a long voyage p 278 N86-27873
Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia p 278 N86-27877
Effects of muscle atrophy on motor control [NASA-CR-177201] p 288 N86-27913

REACTION TIME
Influence of shipboard environmental factors on conditioned reflex activity of experimental animals during a long voyage p 278 N86-27873

REAL TIME OPERATION
JPL's role in the SETI program p 310 N86-26913
Analytical techniques of pilot scanning behavior and their application [NASA-TP-2525] p 292 N86-27920

RECEIVERS
An infrared search for extraterrestrial laser signals p 309 N86-26907

RECOGNITION
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time [AD-A165211] p 291 N86-26833

REDUCED GRAVITY
Exobiology experiment concepts for space station p 310 N86-27152

REGULATIONS
Operating radiation protection: Physical aspects p 288 N86-27911
Operating radiation protection: Medical aspects p 288 N86-27912

REPRODUCTION (BIOLOGY)
Origin of life and iron-rich clays p 300 N86-26866

RESEARCH MANAGEMENT
Biotechnica '85 International Congress for Biotechnology [AD-A165415] p 276 N86-26794

RESPIRATORY DISEASES
Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914

RESPIRATORY PHYSIOLOGY
Pulmonary gas exchange in humans during exercise at sea level p 281 A86-39095
Physiological profile of world-class high-altitude climbers p 281 A86-39098

RESUSCITATION
A fundamental problem in determining functional residual capacity or residual volume — of lungs p 281 A86-39099
RESUSCITATION
Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914
RETINA
Calculations on technical requirements for protection devices against a nuclear light flash p 284 N86-26819
Studies on information processing mechanisms in the central visual system of the cat [EL-861] p 277 N86-27865
RETINAL IMAGES
Studies on visual information processing in retinal neurons [EL-859] p 288 N86-27906
RIBONUCLEIC ACIDS
Stereoselective aminoacylation of RNA p 302 N86-26875
A comparative study of prebiotic and present day translational models p 303 N86-26877
Higher-order structure of rRNA p 305 N86-26888
The rRNA evolution and procaryotic phylogeny p 305 N86-26889

S

SALINITY
Organic S13C values vary slightly with salinity in microbial mats at Guerrero Negro, Baja California Sur, Mexico: Implications for stromatolite S13C values p 308 N86-26900
SAMPLING
Factors influencing carboxyhemoglobin stability [AD-A165032] p 289 N86-27918
SEA LEVEL
Pulmonary gas exchange in humans during exercise at sea level p 281 A86-39095
SEAT BELTS
Validation of SOM-LA occupant response — Seat/Occupant Model - Light Aircraft [SAE PAPER 850850] p 293 A86-38510
SEATS
Validation of SOM-LA occupant response — Seat/Occupant Model - Light Aircraft [SAE PAPER 850850] p 293 A86-38510
SEDATIVES
Driving performance the day after use of loprazolam, flunitrazepem and placebo [VK-83-04] p 290 N86-26826
Flurazepam HCL's residual (hangover) effects upon actual driving performance [VK-83-02] p 291 N86-26834
SEDIMENTS
Earth's early atmosphere as seen from carbon and nitrogen isotopic analysis of Archean sediments p 304 N86-26883
Isotopic, petrologic and biogeochemical investigations of banded iron-formations p 305 N86-26885
Recent progress in Precambrian paleobiology p 305 N86-26887
SENSITIVITY
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure p 294 N86-26813
SENSORY PERCEPTION
Perceptual and physiological responses during exercise in cool and cold water [AD-A165491] p 283 N86-26800
Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876
SEQUENCING
Acquiring procedural skills from lesson sequences [AD-A164580] p 291 N86-26829
SERUMS
Blood serum enzymes during 7-day water immersion p 287 N86-27902
SEX FACTOR
Epinephrine-induced changes in muscle carbohydrate metabolism during exercise in male subjects p 280 A86-39092
SHIPS
Influence of shipboard environmental factors on conditioned reflex activity of experimental animals during a long voyage p 278 N86-27873
SIGNAL DETECTION
Goldstone field test activities: Sky survey p 310 N86-26912
JPL's role in the SETI program p 310 N86-26913
SIGNAL PROCESSING
Stanford Hardware Development Program p 309 N86-26910
Goldstone field test activities: Target search p 309 N86-26911
Studies on information processing mechanisms in the central visual system of the cat [EL-861] p 277 N86-27865
Studies on visual information processing in retinal neurons [EL-859] p 288 N86-27906
SINKS
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796
SKIN (ANATOMY)
Forearm skin and muscle vasoconstriction during lower body negative pressure p 280 A86-39093
SLEEP
Sleep in an aerospace environment p 282 A86-39775
SOFTWARE ENGINEERING
The Berkeley Serendip Project p 309 N86-26906
SOFTWARE TOOLS
Goldstone field test activities: Target search p 309 N86-26911
SOIL SCIENCE
Paleosols and the chemical evolution of the atmosphere p 301 N86-26870
SOLUTIONS
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts p 301 N86-26869
SOLVENTS
Molecular microenvironments: Solvent interactions with nucleic acid bases and ions p 302 N86-26872
SPACE ADAPTATION SYNDROME
Commentary on results of biological satellite program p 278 N86-27871
SPACE COLONIES
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization p 309 N86-26908
SPACE FLIGHT STRESS
Distinctions in humoral control of metabolism with simulation of spaceflight factors p 286 N86-27884
Experiments with developing plants aboard Salyut-5, Salyut-6 and Salyut-7 orbital stations p 279 N86-27891
SPACE FLIGHT TRAINING
USSR Space Life Sciences Digest, Issue 6 [NASA-CR-3922(07)] p 277 N86-27864
SPACE PERCEPTION
Interaction of image characteristics of stereoscopic forms during depth perception [AD-A164895] p 291 N86-26831
SPACE STATIONS
Life science opportunities in the Space Station p 275 A86-37855
SPACEBORNE EXPERIMENTS
Exobiology experiment concepts for space station p 310 N86-27152
SPACEBORNE TELESCOPES
Observational exobiology p 298 N86-26850
SPACECRAFT ENVIRONMENTS
Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) — Russian book p 290 A86-38984
SPATIAL RESOLUTION
Interaction of image characteristics of stereoscopic forms during depth perception [AD-A164895] p 291 N86-26831
SPECTRAL EMISSION
Observational exobiology p 298 N86-26850
SPECTROMETERS
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique p 300 N86-26861
Stanford Hardware Development Program p 309 N86-26910
SPECTROPHOTOMETRY
Direct spectrophotometric method of assaying ammonia concentration in gas environment of seeding chambers p 280 N86-27900
SPECTRORADIOMETERS
Visual and spectroradiometric performance criteria for Night Vision Goggles (NVG) compatible aircraft interior lighting p 294 N86-26807
SPECTRUM ANALYSIS
The organic aerosols of Titan p 298 N86-26852
Ion Mobility Drift Spectrometer (IMDS) as a flight analytical instrument technique p 300 N86-26861
Goldstone field test activities: Target search p 309 N86-26911
JPL's role in the SETI program p 310 N86-26913
Amino acid spectrum of human blood in the presence of emotional stress p 287 N86-27901
SPORES
Panspermia - A modern astrophysical and biological approach p 296 A86-38142
STATISTICAL ANALYSIS
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902
STEERING
Driving performance the day after use of loprazolam, flunitrazepem and placebo [VK-83-04] p 290 N86-26826
The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance [VK-83-05] p 290 N86-26827
Flurazepam HCL's residual (hangover) effects upon actual driving performance [VK-83-02] p 291 N86-26834
STEREOSCOPY
Interaction of image characteristics of stereoscopic forms during depth perception [AD-A164895] p 291 N86-26831
STRAPS
Restraint system for waking Macaca mulatta monkeys during postural tests p 280 N86-27898
STRATOSPHERE
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796
STRESS (PHYSIOLOGY)
The stress syndrome — effects on pilot performance p 290 A86-37276
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26839
Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916
STRESSES
Design and production of damage-resistant tray pack containers [AD-A164595] p 294 N86-26837
STRONGLY COUPLED PLASMAS
Fluid-Electrolyte-Mineral interrelations as affecting work performance [AD-A165325] p 282 N86-26799
SUITS
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26839
Restraint system for waking Macaca mulatta monkeys during postural tests p 280 N86-27898
SULFATES
Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919
SULFIDES
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796
SUNGLASSES
Effects of broad-banded eye protection on dark adaptation p 284 N86-26817
SUPERSATURATION
The role of the oceans in the atmospheric cycle of carbonyl sulfide p 277 N86-26796
SURVEYS
Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876
SWEAT
Sweating reflex in complex of methods for evaluating operator efficiency p 285 N86-27872
SYMBIOSIS
Microbial contributions to the Precambrian Earth p 307 N86-26899
SYMBOLS
Components of verbal intelligence [AD-A163359] p 290 N86-26828
SYNTHESIS (CHEMISTRY)
Investigation of porous polymer gas chromatographic packings for atmospheric analysis of extraterrestrial bodies p 299 N86-26858
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863
Synthesis and analysis in studies of chemical evolution p 300 N86-26864
Isotopic characterisation of prebiotic synthesis of organic material p 300 N86-26865
Models of glycolysis: Glyceraldehyde as a source of energy and monomers for prebiotic condensation reactions p 302 N86-26876
SYSTEMS ENGINEERING
Cockpit automation requirements derived from mission functions data p 293 N86-26318

T

TELEOPERATORS
Baseline experiments in teleoperator control [NASA-TP-2547] p 294 N86-26836
TEMPERATURE CONTROL
Effects of cold exposure on thermal status of men and women p 285 N86-27874

TEMPERATURE EFFECTS
Are interpretations of ancient marine temperatures constrained by the presence of ancient marine organisms? p 276 A86-39470
TEMPLATES
Clay energetics in chemical evolution p 301 N86-26867
Adsorption and condensation of amino acids and nucleotides with soluble mineral salts p 301 N86-26869
Cooperation of catalysts and templates p 301 N86-26871
Molecular replication p 302 N86-26874
Stereoselective aminoacylation of RNA p 302 N86-26875
TEST EQUIPMENT
Studies on accurate measurements and analyses of human olfactory evoked potentials [EL-863] p 288 N86-27907
TEXTBOOKS
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time [AD-A165211] p 291 N86-26833
THERAPY
Concerning barotrauma of the lungs-translation [AD-A165006] p 289 N86-27914
US Air Force combat psychiatry [AD-A165011] p 292 N86-27921
THERMAL ENVIRONMENTS
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials [AD-A165034] p 277 N86-27866
THERMAL PROTECTION
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26830
THERMOREGULATION
Human thermoregulatory responses to cold air are altered by repeated cold water immersion p 281 A86-39094
Individual parameters in thermoregulatory control; a review — plasma diagnostics [IZF-1985-26] p 283 N86-26801
Effects of cold exposure on thermal status of men and women p 285 N86-27874
Study of brain biochemistry during hypothermia p 285 N86-27875
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916
THIOLS
Evolution of thiol protective systems in prokaryotes p 307 N86-26896
THRESHOLD CURRENTS
Human body impedance and threshold currents for perception and pain for contact hazard analysis in the VLF-MF band p 281 A86-39598
TIME FUNCTIONS
Development, growth and time — biological model [CWI-CS-R8516] p 277 N86-26795
TISSUES (BIOLOGY)
Mechanism of electromagnetic energy effects on the nervous system: Voltage-clamp study [AD-A164653] p 282 N86-26798
TITAN
The organic aerosols of Titan p 298 N86-26852
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres p 298 N86-26853
A gas chromatograph experiment for a Titan entry probe p 299 N86-26856
TRAINING EVALUATION
Changes in Naval Aviation Basic Instrument flight training: An analysis [AD-A164738] p 291 N86-26830
TRAINING SIMULATORS
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure p 294 N86-26813
USSR Space Life Sciences Digest, Issue 6 [NASA-CR-3922(07)] p 277 N86-27864
TRAYS
Design and production of damage-resistant tray pack containers [AD-A164595] p 294 N86-26837

U

U.S.S.R.
USSR Space Life Sciences Digest, Issue 6 [NASA-CR-3922(07)] p 277 N86-27864
ULTRASONICS
Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876
ULTRAVIOLET RADIATION
Panspermia - A modern astrophysical and biological approach p 296 A86-38142
Origin of life and iron-rich clays p 300 N86-26866
Biosynthetic porphyrins and the origin of photosynthesis p 306 N86-26894
Prospects for using ultraviolet radiation in long-term spaceflights p 285 N86-27879
Effect of different doses of ultraviolet radiation on vitamin levels in man p 287 N86-27893
URINE
Urinary and hematological indices of hypohydration [AD-A165015] p 289 N86-27917

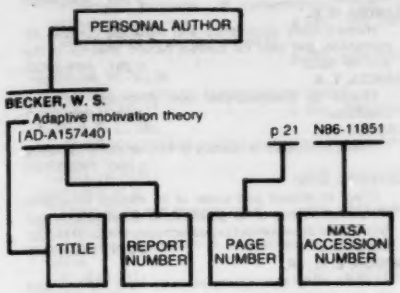
V

VASCULAR SYSTEM
Experimental and general theoretical research: Nature of circulatory regulation in pilots p 285 N86-27880
VASOCONSTRICTION
Forearm skin and muscle vasoconstriction during lower body negative pressure p 280 A86-39093
VEGETATION GROWTH
Experiments with developing plants aboard Salyut-5, Salyut-6 and Salyut-7 orbital stations p 279 N86-27891
Reproductive capacity of microflora on polymers used in sealed environments p 280 N86-27897
VERBAL COMMUNICATION
Components of verbal intelligence [AD-A163359] p 290 N86-26828
Initial skill learning: An analysis of how elaborations facilitate the three components [AD-A165137] p 292 N86-27922
VERTICAL PERCEPTION
Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919
VISION
Effects of atropine sulfate on aircrew performance [AD-A165063] p 290 N86-27919
VISUAL ACUITY
Aeromedical lessons learned with night vision devices p 283 N86-26810
Contact lenses for pilots and aircrew in the services p 284 N86-26815
Permanent visual change associated with punctate foveal lesions p 284 N86-26823
Soft contact lens wear during +G(Z) acceleration [AD-A165013] p 289 N86-27915
VISUAL AIDS
Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805
VISUAL PERCEPTION
Visual Protection and Enhancement [AGARD-CP-379] p 283 N86-26802
Particular problems of airworthiness from an ophthalmological view p 283 N86-26812
Computer visual simulation of contrast sensitivity deficits induced by laser and chemical antidote exposure p 294 N86-26813
Eye protection against intense light sources p 284 N86-26818
Studies on information processing mechanisms in the central visual system of the cat [EL-861] p 277 N86-27865
VISUAL STIMULI
Studies on information processing mechanisms in the central visual system of the cat [EL-861] p 277 N86-27865
Studies on visual information processing in retinal neurons [EL-859] p 288 N86-27906
VITAMINS
Effect of different doses of ultraviolet radiation on vitamin levels in man p 287 N86-27893

W

WALKING
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress [AD-A165014] p 289 N86-27916
WATER
Photolysis products of CO, NH3 aND H2O and their significance to reactions on interstellar grains p 298 N86-26849
WATER IMMERSION
Human thermoregulatory responses to cold air are altered by repeated cold water immersion p 281 A86-39094
Blood serum enzymes during 7-day water immersion p 287 N86-27902
WAVE DIFFRACTION
The application of diffraction optics techniques to laser eye protection p 284 N86-26821
WAVEFORMS
Studies on accurate measurements and analyses of human olfactory evoked potentials [EL-863] p 288 N86-27907
WEAPON SYSTEMS
Factors influencing carboxyhemoglobin stability [AD-A165032] p 289 N86-27918
WEIGHT (MASS)
A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept [AD-A164687] p 295 N86-26830
WORDS (LANGUAGE)
Components of verbal intelligence [AD-A163359] p 290 N86-26828
WORK
Fluid-Electrolyte-Mineral interrelations as affecting work performance [AD-A165325] p 282 N86-26799
WORK CAPACITY
Sweating reflex in complex of methods for evaluating operator efficiency p 285 N86-27872
Physical endurance of rats during intensive and repeated exposure to stationary magnetic field p 279 N86-27894
WORKLOADS (PSYCHOPHYSIOLOGY)
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319
Psychoemotional pilot stress prior to ejection and its role in appropriate performance p 292 N86-27881
Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882
Analytical techniques of pilot scanning behavior and their application [NASA-TP-2525] p 292 N86-27920

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ADAMS, R. R.
The healthy motivation to fly: No psychiatric diagnosis [AD-A164944] p 291 N86-26832

ADAMS, W. H.
Late biological effects from internal and external exposure [DE86-001181] p 278 N86-27868

Changes in the carbohydrate energy metabolism in the rat brain under laser radiation p 276 A86-39719

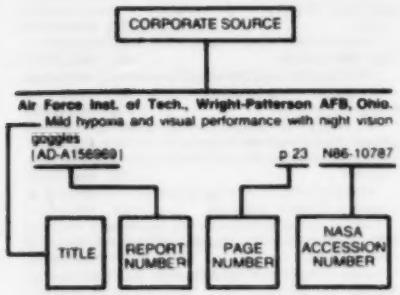
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
Visual Protection and Enhancement
[AGARD-CP-379] p 283 N86-26802
Contact lenses for pilots and aircrew in the services
p 284 N86-26815

Air Force Systems Command, Wright-Patterson AFB, Ohio.
Concerning barotrauma of the lungs-translation
[AD-A165006] p 289 N86-27914

Alabama Univ., Birmingham.
Intramolecular interactions in aminoacyl nucleotides: Implications regarding the origin of genetic coding and protein synthesis p 302 N86-26873

Anthropology Research Project, Yellow Springs, Ohio.
Demographic and anthropometric assessment of US Army anthropometric data base
[AD-A164637] p 295 N86-26838

Arizona Water Resources Research Center, Tucson.
Effects of muscle atrophy on motor control
[NASA-CR-177201] p 288 N86-27913

Army Aeromedical Research Lab., Fort Rucker, Ala.
Aeromedical lessons learned with night vision devices
p 283 N86-26810

Army Research Inst. of Environmental Medicine, Natick, Mass.
Perceptual and physiological responses during exercise in cool and cold water
[AD-A165491] p 283 N86-26800
Influence of erythrocythemia on blood volume and thermoregulation during exercise-heat stress
[AD-A165014] p 289 N86-27916
Urinary and hematological indices of hypohydration
[AD-A165015] p 289 N86-27917

Army Test and Evaluation Command, Aberdeen Proving Ground, Md.
Soldier-computer interface
[AD-A165326] p 295 N86-26841

B

Boston Univ., Mass.
Fluid-Electrolyte-Mineral interrelations as affecting work performance
[AD-A165925] p 282 N86-26799
Microbial contributions to the Precambrian Earth
p 307 N86-26899
Using the IRAS data to search in the asteroid belt for any potential evidence of galactic colonization
p 309 N86-26908

British Aerospace Public Ltd. Co., Lancashire (England).
Human factors: The Cinderella discipline in cockpit interface design p 294 N86-26825

Brookhaven National Lab., Upton, N. Y.
Late biological effects from internal and external exposure
[DE86-001181] p 278 N86-27868

C

Calabria Univ., Cosenza (Italy).
Operating radiation protection: Physical aspects
p 288 N86-27911

California Univ., Berkeley.
Observational exobiology p 298 N86-26850
Investigations with methanobacteria and with evolution of the genetic code p 306 N86-26890
Thioredoxins in evolutionarily primitive organisms
p 306 N86-26893
The Berkeley Serendip Project p 309 N86-26906
An infrared search for extraterrestrial laser signals
p 309 N86-26907
Goldstone field test activities: Target search
p 309 N86-26911

California Univ., Berkeley. Lawrence Berkeley Lab.
Geochemical anomalies, bolide impacts and biological extinctions on the Earth p 309 N86-26903

California Univ., Irvine.
Functional and evolutionary relationships between bacteriorhodopsin and halorhodopsin in the archaebacterium, halobacterium halobium
p 306 N86-26892

California Univ., Los Angeles.
Use of laboratory simulated pyrolysis in tracing the history of sedimentary organic matter
p 304 N86-26884
Recent progress in Precambrian paleobiology
p 305 N86-26887

California Univ., San Diego, La Jolla.
Energy yields in the prebiotic synthesis of hydrogen cyanide and formaldehyde p 300 N86-26863
Evolution of thiol protective systems in prokaryotes
p 307 N86-26896

California Univ., Santa Barbara.
Are interpretations of ancient marine temperatures constrained by the presence of ancient marine organisms? p 276 A86-39470

Carnegie-Mellon Univ., Pittsburgh, Pa.
The role of elaborations in instructional texts: Learning to use the appropriate procedure at the appropriate time
[AD-A165211] p 291 N86-26833
Initial skill learning: An analysis of how elaborations facilitate the three components
[AD-A165137] p 292 N86-27922

Center for Mathematics and Computer Science, Amsterdam (Netherlands).
Development, growth and time
[CWI-CS-R8516] p 277 N86-26795

Chicago Univ., Ill.
Some implications of mass extinction for the evolution of complex life p 275 A86-39147
The fossil record of evolution: Analysis of extinction
p 308 N86-26901
The fossil record of evolution: Data on diversification and extinction p 308 N86-26902

Cornell Univ., Ithaca, N.Y.
The organic aerosols of Titan p 296 N86-26852
Stereoselective aminoacylation of RNA
p 302 N86-26875

Cummings Solar Corp., Wilmington, Mass.
Design and production of damage-resistant tray pack containers
[AD-A164595] p 294 N86-26837

E

Electrotechnical Lab., Ibaraki (Japan).
Studies on information processing mechanisms in the central visual system of the cat
[EL-861] p 277 N86-27865
Studies on visual information processing in retinal neurons
[EL-859] p 288 N86-27906
Studies on accurate measurements and analyses of human olfactory evoked potentials
[EL-863] p 288 N86-27907

European Nuclear Energy Agency, Frascati (Italy).
Operating radiation protection: Medical aspects
p 288 N86-27912

F

Federal Aviation Administration, Washington, D.C.
Inhalation toxicology. 5: Evaluation of relative toxicity to rats of thermal decomposition products from two aircraft seat fire-blocking materials
[AD-A165034] p 277 N86-27866

Ferranti Defence Systems Ltd., Edinburgh (Scotland).
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319

Five-College Astronomy Dept., Amherst, Mass.
Recent observations of organic molecules in nearby cold, dark interstellar clouds p 296 A86-38139

Florida State Univ., Tallahassee.
Microfossils in the Antarctic cold desert: Possible implications for Mars p 307 N86-26897

G

George Washington Univ., Washington, D.C.
Microwave effects on CNS: A histopathologic, ultrastructural and autoradiographic study
[AD-A165040] p 277 N86-27867

German Army Aviation School, Buerkeburg (West Germany).
Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805

Groningen Rijksuniversiteit (Netherlands).
Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] p 290 N86-26826
The effects of the antidepressants oxaprotiline, mianserin, amitriptyline and doxepin upon actual driving performance
[VK-83-05] p 290 N86-26827
Flurazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] p 291 N86-26834

H

Hamburg Univ. (West Germany).
Particular problems of airworthiness from an ophthalmological view p 283 N86-26812
New glasses for presbyopic pilots
p 283 N86-26814

Harvard Univ., Cambridge, Mass.
The D to H ratio on Titan and the planets: Implications for origin and evolution of planetary atmospheres
p 298 N86-26853
Paleosols and the chemical evolution of the atmosphere p 301 N86-26870

Hawaii Univ., Honolulu.
Photochemical reactions of various model protocell systems p 303 N86-26879

Health Effects Research Lab., Research Triangle Park, N. C.
Factors influencing carboxyhemoglobin stability
[AD-A165032] p 289 N86-27918
Houston Univ., Tex.
The principle of cooperation and life's origin and evolution p 305 N86-26880
The rRNA evolution and procaryotic phylogeny p 305 N86-26889

I

Illinois Univ., Urbana.
Higher-order structure of rRNA p 305 N86-26888
Indiana Univ., Bloomington.
Isotopic, petrologic and biogeochemical investigations of banded iron-formations p 305 N86-26885
Institute for Perception RVO-TNO, Soesterberg (Netherlands).
Individual parameters in thermoregulatory control: a review
[IZF-1985-26] p 283 N86-26801
Istituto Superiore di Sanita, Rome (Italy).

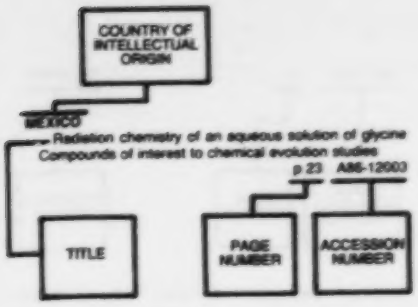
Components of verbal intelligence
[AD-A163359] p 290 N86-26828

Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

AUSTRALIA

Prebiotic matter in interstellar molecules
p 296 A86-38138

A lightweight impermeable suit for chemical protection in warm conditions: A preliminary look at the concept
[AD-A164687] p 295 N86-26839

B

BELGIUM

On the occurrence and appearance of galactic life forms - A thermodynamic approach p 297 A86-38150

BULGARIA

Concerning barotrauma of the lungs-translation
[AD-A165006] p 280 N86-27914

F

FRANCE

Flight illness and a past myocardial infarction
p 281 A86-39772

A practical attitude toward ventricular repolarization abnormalities in flight crews p 282 A86-39773

Normal or pathological coronary status - Reflections and practical experiences for expertise with flight personnel
p 282 A86-39774

Sleep in an aerospace environment
p 282 A86-39775

Visual Protection and Enhancement
[AGARD-CP-379] p 283 N86-26802

Contact lenses for pilots and aircrew in the services
p 284 N86-26815

G

GERMANY,FEDERAL REPUBLIC OF

Cockpit automation requirements derived from mission functions data p 293 N86-26318

Operational experiences with night vision goggles in helicopter low-level flight at night p 293 N86-26805

Particular problems of airworthiness from an ophthalmological view p 283 N86-26812

New glasses for presbyopic pilots
p 283 N86-26814

Calculations on technical requirements for protection devices against a nuclear light flash
p 284 N86-26819

I

ITALY

Elements of Radiation Protection
[ISS-L-84/7] p 288 N86-27908

Biological effects of ionizing radiation
p 288 N86-27909

Effects of radiation health p 288 N86-27910

Operating radiation protection: Physical aspects
p 288 N86-27911

Operating radiation protection: Medical aspects
p 288 N86-27912

J

JAPAN

Recent observations of organic molecules in nearby cold, dark interstellar clouds p 296 A86-38139

Studies on information processing mechanisms in the central visual system of the cat
[EL-861] p 277 N86-27865

Studies on visual information processing in retinal neurons
[EL-859] p 288 N86-27906

Studies on accurate measurements and analyses of human olfactory evoked potentials
[EL-863] p 288 N86-27907

N

NETHERLANDS

Infrared spectral identification of complex organic molecules in interstellar grains p 296 A86-38140

Panspermia - A modern astrophysical and biological approach p 296 A86-38142

Development, growth and time
[CWI-CS-R8516] p 277 N86-26795

Individual parameters in thermoregulatory control; a review
[IZF-1985-26] p 283 N86-26801

Dynamic behaviour of spherical and aspherical contact lenses exposed to +Gz-acceleration forces
p 294 N86-26816

Driving performance the day after use of loprazolam, flunitrazepam and placebo
[VK-83-04] p 290 N86-26826

The effects of the antidepressants oxaprotiline, mianserin, amitryptiline and doxepin upon actual driving performance
[VK-83-05] p 290 N86-26827

Flurazepam HCL's residual (hangover) effects upon actual driving performance
[VK-83-02] p 291 N86-26834

A model and experimental analysis of pilot decision making behavior for various automatic approach conditions
[NLR-TR-84037-U] p 292 N86-26835

S

SWEDEN

Epinephrine-induced changes in muscle carbohydrate metabolism during exercise in male subjects
p 280 A86-39092

SWITZERLAND

Physiological profile of world-class high-altitude climbers p 281 A86-39098

U

U.S.S.R.

Designing the conditions of life and work of cosmonauts (2nd revised and enlarged edition) p 290 A86-38984

Cosmonaut training p 293 A86-38986

Cyclic adenosine-3',5'-monophosphate and cyclic guanosine-3',5'-monophosphate in the blood plasma of mice injected with chemicals of different radioprotective efficiency p 276 A86-39718

Changes in the carbohydrate energy metabolism in the rat brain under laser radiation p 276 A86-39719

An anaerobic shift in energy metabolism in the mouse brain during recovery from acute radiation sickness
p 276 A86-39720

The mechanisms of the effect of nonionizing radiation on an organism's sensory systems p 276 A86-39721

The effect of radiation on the concentration and metabolism of dopamine in the rat brain
p 276 A86-39722

USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-008] p 278 N86-27869

Lactobacteria and prophylaxis in space
p 285 N86-27870

Commentary on results of biological satellite program
p 278 N86-27871

Sweating reflex in complex of methods for evaluating operator efficiency p 285 N86-27872

Influence of shipboard environmental factors on conditioned reflex activity of experimental animals during a long voyage p 278 N86-27873

Effects of cold exposure on thermal status of men and women p 285 N86-27874

Study of brain biochemistry during hypothermia
p 285 N86-27875

Somatosensory and auditory perception according to study using focused ultrasound p 285 N86-27876

Change of RNA and protein level in neurons-glia system under effects of hyperthermia and hypoxia
p 278 N86-27877

USSR report: Space Biology and Aerospace Medicine, no. 1, January - February 1986
[JPRS-USB-86-003] p 278 N86-27878

Prospects for using ultraviolet radiation in long-term spaceflights p 285 N86-27879

Experimental and general theoretical research: Nature of circulatory regulation in pilots p 285 N86-27880

Psychoemotional pilot stress prior to ejection and its role in appropriate performance p 292 N86-27881

Effect of intensive operator work on lipid peroxidation processes in man p 286 N86-27882

Effect of rhythmic photic interference on working electroencephalogram and efficiency of human movements p 292 N86-27883

Distinctions in humoral control of metabolism with simulation of spaceflight factors p 286 N86-27884

Some human reactions during 7-day antiorthostatic hypokinesia p 286 N86-27885

Collagen, lipid and glycogen content of rat skeletal muscles in recovery period after 15- and 30-day hypokinesia p 279 N86-27886

Human central hemodynamics during lower limb decompression p 286 N86-27887

Phasic processes in kinetics of formed blood elements
p 286 N86-27888

Morphological and biochemical investigation of rat adrenocortical function during long-term hypokinesia
p 279 N86-27889

Effect of diphosphonates on bones of hypokinetic rats
p 279 N86-27890

Experiments with developing plants aboard Salyut-5, Salyut-6 and Salyut-7 oribital stations
p 279 N86-27891

T and B components of immunity in the presence of acute mountain sickness p 286 N86-27892

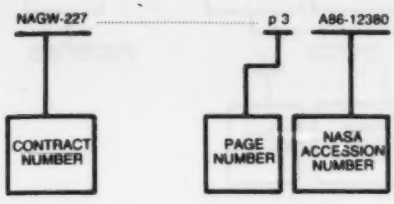
FOREIGN

Effect of different doses of ultraviolet radiation on vitamin levels in man p 287 N86-27893
Physical endurance of rats during intensive and repeated exposure to stationary magnetic field p 279 N86-27894
Radiobiological validation of quality factor of protons and helium ions p 287 N86-27895
Effect of dibasol and some of its imidazo analogues on animal tolerance to gravitational accelerations and dynamics of development of postischemic cerebrovascular phenomena p 279 N86-27896
Reproductive capacity of microflora on polymers used in sealed environments p 280 N86-27897
Restraint system for waking Macaca mulatta monkeys during postural tests p 280 N86-27898
Method of demonstrating calcium in human foot by neutron activation of (alpha, N)-sources p 287 N86-27899
Direct spectrophotometric method of assaying ammonia concentration in gas environment of seeding chambers p 280 N86-27900
Amino acid spectrum of human blood in the presence of emotional stress p 287 N86-27901
Blood serum enzymes during 7-day water immersion p 287 N86-27902
Intensity of photosynthesis in closteriopsis acicular var. africana Hind as a function of oxygen concentration in the atmosphere p 280 N86-27903
Radioprotective and therapeutic efficacy of carrageenan against proton radiation p 287 N86-27904

UNITED KINGDOM

Astronomical sources of circularly polarized light and their role in determining molecular chirality on earth p 297 A86-38144
Automation and pilot interactions in night or all-weather tactical operations p 293 N86-26319
Biotechnica '85 International Congress for Biotechnology [AD-A165415] p 276 N86-26794
Human factors: The Cinderella discipline in cockpit interface design p 294 N86-26825

Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A04.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 125 reports, articles and other documents announced during October 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes — subject, personal author, corporate source, foreign technology, contract, report number, and accession number — are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

		Page
Category 51	**Life Sciences (General)** Includes genetics.	371
Category 52	**Aerospace Medicine** Includes physiological factors; biological effects of radiation; and weightlessness.	376
Category 53	**Behavioral Sciences** Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.	381
Category 54	**Man/System Technology and Life Support** Includes human engineering; biotechnology; and space suits and protective clothing.	383
Category 55	**Planetary Biology** Includes exobiology; and extraterrestrial life.	386

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

THE NEW ANSI RF RADIATION EXPOSURE STANDARD - ITS BACKGROUND AND IMPACT
D. E. HUDSON (Lockheed Aircraft Service, Co., Ontario, CA) IN: Space tech; Proceedings of the Conference and Exposition, Anaheim, CA, September 23-25, 1985 . Dearborn, MI, Society of Manufacturing Engineers, 1985, p. 8-1 to 8-6.

The recently revised ANSI C95 RF Radiation Exposure Standard is presented with attention focused on instrumentation guidelines for measuring potentially hazardous fields. Some of the research background for the new standard is given and its impact explained. This revised standard, released in 1982, is concerned with the biological hazards of nonionizing RF radiation; it covers the radiant energy spectrum from 300 KHz to 100 Ghz. Radio frequency protection guides are indicated schematically in terms of mean squared electric and magnetic field strengths and the equivalent plane-wave free-space power density. It is noted that for mixed or broadband fields, at a number of frequencies for which there are different values of protection guides, the fraction of the protection guide within each frequency interval should not be greater than one. ENHANCING EFFECTS OF GAMMA INTERFERON ON PHAGOCYTIC CELL ASSOCIATION WITH AND KILLING OF TRYPANOSOMA CRUZI
J. J. WIRTH, F. KIERSZENBAUM (Michigan State University, East Lansing), G. SONNENFELD (Louisville, University, KY), and A. ZLOTNIK (DNAX Research Institute, Palo Alto, CA) Infection and Immunity (ISSN 0019-9567), vol. 49, July 1985, p. 61-66. refs
(Contract NIH-AI-14848; NIH-AI-17041; NIH-AI-07203; NCC2-213)

Results are reported from a study of the influence gamma interferon (GIFN) and interleukin 2 (IL2) have on the capability of P388D1 cells and mouse resident peritoneal macrophages (MPM) to attach to the blood-resident parasites Trypanosoma cruzi and kill them. Cultures of trypomastigote forms of the Tulahuen strain of T. cruzi grown in bovine serum were introduced into peritoneal cells of mice, along with P388D1 cells incubated with GIFN, IL2 and both. Control cells were also maintained. Statistical analysis were then performed on data on counts of the number of dead T. Cruzi cells. The GIFN enhanced the interaction of MPM and P388D1 cells with the surface of T. Cruzi, provided the interaction was given over 12 hr to take place. A depression of the cytotoxicity of P388D1 cells was attributed to mediation by H2O2, an effect partially offset by incubation with the lymphokine GIFN. M.S.K.

CARBON ISOTOPIC FRACTIONATION IN HETEROTROPHIC MICROBIAL METABOLISM
N. BLAIR, A. LEU, E. MUNOZ, J. OLSEN, E. KWONG, and D. DES MARAIS (NASA, Ames Research Center, Moffett Field, CA) Applied and Environmental Microbiology (ISSN 0099-2240), vol. 50, Oct. 1985, p. 996-1001. NASA-supported research. refs

Differences in the natural-abundance carbon stable isotopic compositions between products from aerobic cultures of Escherichia coli K-12 were measured. Respired CO2 was 3.4 percent depleted in C-13 relative to the glucose used as the carbon source, whereas the acetate was 12.3 percent enriched in C-13. The acetate C-13 enrichment was solely in the carboxyl group. Even though the total cellular carbon was only 0.6 percent depleted in C-13, intracellular components exhibited a significant isotopic heterogeneity. The protein and lipid fractions were -1.1 and -2.7 percent, respectively. Aspartic and glutamic acids were -1.6 and +2.7 percent, respectively, yet citrate was isotopically identical to the glucose. Probable sites of carbon isotopic fractionation include the enzyme, phosphotransacetylase, and the Krebs cycle.

NUCLEAR LAMINS AND PERIPHERAL NUCLEAR ANTIGENS DURING FERTILIZATION AND EMBRYOGENESIS IN MICE AND SEA URCHINS
G. SCHATTEN, H. SCHATTEN, C. SIMERLY (Florida State University, Tallahassee), G. G. MAUL (Wistar Institute of Anatomy and Biology, Philadelphia, PA), N. CHALY (Ottawa, University, Canada) et al. National Academy of Sciences, Proceedings (ISSN 0027-8424), vol. 82, July 1985, p. 4727-4731. Research supported by the Medical Research Council of Canada. refs
(Contract NIH-HD-12913; NIH-RR-1466; NIH-GM-21615; NIH-CA-10815; NIH-HD-363; NSF PCM-83-15900; NAG2-340)

Nuclear structural changes during fertilization and embryogenesis in mice and sea urchins are traced using four antibodies. The oocytes from virgin female mice, morulae and blastocytes from mated females, and gametes from the sea urchin Lytechnius variegatis are studied using mouse monoclonal antibodies to nuclear lamin A/C, monoclonal antibody to P1, human autoimmune antibodies to lamin A/C, and to lamin B. The mouse fertilization data reveal no lamins on the oocyte; however, lamins are present on the pronuclei, and chromosomes are found on the oocytes and pronuclei. It is detected that on the sea urchin sperm the lamins are reduced to acrosomal and centriolar fossae and peripheral antigens are around the sperm nucleus. The mouse sperm bind lamin antibodies regionally and do not contain antigens.

Lamins and antigens are observed on both pronuclei and chromosomes during sea urchin fertilization. Mouse embryogenesis reveals that lamin A/C is not recognized at morula and blastocyst stages; however, lamin B stains are retained. In sea urchin embryogenesis lamin recognition is lost at the blastrula, gastrula, and plutei stages. It is noted that nuclear lamins lost during spermatogenesis are restored at fertilization and peripheral antigens are associated with the surface of chromosomes during meiosis and mitosis and with the periphery of the pronuclei and nuclei during interphase. I.F.

A86-40875
A BENZODIAZEPINE USED IN THE TREATMENT OF INSOMNIA PHASE-SHIFTS - THE MAMMALIAN CIRCADIAN CLOCK
F. W. TUREK and S. LOSEE-OLSON (Northwestern University, Evanston, IL) Nature (ISSN 0028-0836), vol. 321, May 8, 1986, p. 167, 168. Research supported by the Whitehall Foundation and Upjohn Co. refs
(Contract NIH-HD-09885)

It is reported that the acute administration of triazolam, a short-acting benzodiazepine commonly prescribed for the treatment of insomnia, induces a phase shift in the circadian rhythm of locomotor activity in hamsters. This suggests a role for the GABA-containing neurones in the mammalian circadian system. D.H.

A86-41043
RNA CATALYSIS AND THE ORIGIN OF LIFE
N. R. PACE and T. L. MARSH (Indiana University, Bloomington) Origins of Life (ISSN 0302-1688), vol. 16, no. 2, 1985, p. 97-116. refs
(Contract NIH-GM-34527)

Until the discovery of catalytic RNAs, first the self-splicing intron in Tetrahymena and then the bacterial RNAse P, cellular enzymes had always seemed to be protein in nature. The recognition that RNA can catalytically make and break phosphodiester bonds simplifies some of the assumptions required of a rudimentary self-replicating entity. Available information on the chemistry of RNA-catalyzed reactions is reviewed, with particular attention to self-splicing introns and tRNA processing by RNAse P. An explicit model for a self-replicating RNA is described. The model postulates a nucleotide binding polymerization site in the RNA, and takes advantage of intrinsic fluidity in RNA higher order structure to dissociate parent and progeny complementary strands. Author

A86-41045* Hebrew Univ. of Jerusalem, Rehovot (Israel).
THE SYNTHESIS OF PRIMITIVE 'LIVING' FORMS - DEFINITIONS, GOALS, STRATEGIES AND EVOLUTION SYNTHESIZERS
N. LAHAV (Jerusalem, Hebrew University, Rehovot, Israel) Origins of Life (ISSN 0302-1688), vol. 16, no. 2, 1985, p. 129-149. Research supported by the Fredric Burk Foundation and NASA. refs

The arbitrariness of the definition of life is discussed in relation to both the archaic biological entities that preceded cells during the Molecular Evolution era, and the hypothetical, primitive, 'living' entities that presumably can be synthesized in the laboratory. Several experimental approaches to the synthesis, detection, and characterization of 'living' entities are discussed. The experimental approaches considered for the synthesis are the constructionist strategy, the whole-environment strategy, and the modular strategy, which is a combination of the first two. The whole-environment strategy is discussed in more detail and the establishment of an Evolution Synthesizer, based on this strategy, is proposed and rationalized. The guidelines for the detection and characterization of populations and processes of 'living' entities include chemical and physical analyses, but are based mainly on the reproductive characterization of these entities. It is expected that the higher the evolutionary level of the 'living' entities, the longer and more difficult it will be to synthesize them, but the easier it will be to detect them. Author

A86-41046* Alabama Univ., Birmingham.
CHIRALLY SELECTIVE, INTRAMOLECULAR INTERACTION OBSERVED IN AN AMINOACYL ADENYLATE ANHYDRIDE
J. C. LACEY, JR., L. M. HALL, D. W. MULLINS, JR., and C. L. WATKINS (Alabama, University, Birmingham) Origins of Life (ISSN 0302-1688), vol. 16, no. 2, 1985, p. 151-156. refs
(Contract NGR-01-010-001)

The interaction between amino acids and nucleotide bases is studied. The proton NMR spectrum of N-acetylphenylalanyl-AMP-anhydride is analyzed H8 and H2 signals, two upfield signals of equal size, and five phenylalanine ring proton signals are observed in the spectrum; the upfield movement of the proton and the racemization of the N-acetyl L-phenylalanine material are examined. The differences in the position of the signals due to the diastereoisomers are investigated. The separation of the D and L amino acyl adenylates using HPLC is described. H-1 NMR spectra of the isomers are examined in order to determine which isomer displays the strongest interaction between the phenyl ring and the adenine ring. The spectra reveal that the L isomer shows the highest upfield change of both H8 and H2 signals. It is noted that the phenyl ring lies over C2 of the adenine ring with the phenyl meta and para protons extended past the adenine ring and the phenyl ortho protons. I.F.

A86-41047
CONSERVATION OF THE SECONDARY STRUCTURE OF PROTEIN DURING EVOLUTION AND THE ROLE OF THE GENETIC CODE
M. A. SOTO, A. SEPULVEDA, and J. TOJA C. (Universidad de Chile, Santiago) Origins of Life (ISSN 0302-1688), vol. 16, no. 2, 1985, p. 157-164. Research supported by the Universidad de Chile and Fondo Nacional de Investigacion Cientifica y Tecnologica. refs

In a group of modern proteins, following an algorithm described by Argyle (1980) it is demonstrated that the ordination of the amino acids in terms of the most frequent substitutions agrees with the conservation of the alpha-helix, beta-sheet, and beta-turn formation tendencies during evolution. The same correspondence has been demonstrated for the conservation of the physicochemical properties in the amino acid substitutions. Both parameters are similar in showing higher correlation with the most frequent amino acid substitutions than with the feasibility of changes at the level of the respective codons. Some kind of restrictions for the expression of the genomic changes, due to the conservation of the secondary structure of proteins and/or the physicochemical properties of the substituted amino acids, could account for the differences found between the distribution of the amino acid substitutions and the most probable codon changes. Author

A86-41784
SPINAL CORD DECOMPRESSION SICKNESS - A COMPARISON OF RECOMPRESSION THERAPIES IN AN ANIMAL MODEL
J. J. W. SYKES, J. M. HALLENBECK, and D. R. LEITCH (U.S. Navy, Naval Medical Research Institute, Bethesda, MD) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 561-568. refs
(Contract NAVY TASK M0099,PN01C,0001)

Recompression therapies for spinal cord decompression sickness (DCS) are described. Male, mongrel dogs were subjected to a dive profile that caused spinal cord DCS. The animals were treated after a delay allowing the lesion to consolidate. One group was recompressed to 60 feet of sea water (fsw) breathing 100 percent oxygen and a second group at 66 fsw breawing 66 percent oxygen. Somatosensory evoked potentials and physiological data for the subjects are analyzed. No differences are detected in the

severity, surface interval before treatment, or the maximum effect of the treatment for the two groups. The differences between the animals that responded and did not respond to the treatments are examined. The advantages and disadvantages of the two treatments are discussed, and it is noted that the efficacy of the therapies are similar. I.F.

A86-41786
POSTRADIATION REGIONAL CEREBRAL BLOOD FLOW IN PRIMATES
L. G. COCKERHAM, T. J. CERVENY, and J. D. HAMPTON (U.S. Armed Forces Radiobiology Research Institute, Bethesda, MD) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 578-582. DNA-supported research. refs

A86-41787
STIMULATING EFFECT OF SPACE FLIGHT FACTORS ON ARTEMIA CYSTS COMPARISON WITH IRRADIATION BY GAMMA RAYS
Y. GAUBIN, B. PIANEZZI, G. GASSET, H. PLANNEL, and E. E. KOVALEV (Toulouse III, Universite, France; Institut Mediko-Biologicheskikh Problem, Moscow, USSR) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 583-590. CNES-supported research. refs

The Artemia cyst, a gastrula in dormant state, is a very suitable material to investigate the individual effects of high charge and high energy cosmic particles. Monolayers of Artemia cysts, sandwiched with nuclear emulsions, flew aboard the Soviet biosatellite Cosmos 1129. The space flight stimulated the developmental capacity expressed by higher percentages of emergence, hatching, and alive nauplii at day 4-5. A greater mean life span was reported in Artemias developed from Artemia cysts hit by the cosmic heavy ions. On earth, Artemia cysts were exposed to 1, 10, 100, 200, and 400 Gy of gamma rays. A stimulating effect on developmental capacity was observed for 10 Gy; the mean life span was significantly increased for this dose. These results are discussed in comparison with previous investigations performed on earth and in space. Author

CIRCULATION AND OXYGEN TENSION IN THE BRAIN OF WAKEFUL RABBITS IN CONDITIONS LEADING TO MOTION SICKNESS [KROVOOBRASHCHENIE I NAPRIAZHENIE KISLORODA V GOLOVNOM MOZGE BODRSTVUIUSHCHIKH KROLIKOV PRI UKACHIVANII]
N. A. SKOROMNYI, I. T. DEMCHENKO, A. I. BEKETOV, and IU. E. MOSKALENKKO (Krymskii Meditsinskii Institut, Simferopol, Ukrainian SSR; AN SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, March 1986, p. 352-356. In Russian. refs

The effect of vestibular irritation, produced by rocking the animals on a swing, on circulation and oxygen tension (pO2) in the rabbit brain was investigated using the methods of hydrogen clearance and polarography. Systemic arterial pressure was measured in the same animals during a second experimental series, using a catheterized femoral artery. The swinging motion was found to induce increases in total brain circulation, as well as in circulation within regional cortical areas, with the most significant (and the first to appear) changes found in the temporal lobe, followed by the occipital and frontal lobes. The observed changes took place without significant changes in pO2, and did not coincide with the registered alterations in blood pressure, which were inconsistent and variable. It is suggested that the circulation increases were due to a direct dilatory response to the stimuli received from the vestibular analyzer, as well as to activation of the cortical metabolism. I.S.

HEMODYNAMIC CORRELATES OF IMMOBILIZATION STRESS IN RATS [GEMODINAMICHESKIE KORRELIATY IMMOBILIZATSIONNOGO STRESSA U KRYS]
O. S. MEDVEDEV, A. N. MURASHEV, and F. E. MEERTSUK (Institut Eksperimental'noi Kardiologii, Moscow, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, March 1986, p. 363-367. In Russian. refs

The effect of 46-min-long immobilization on systemic and regional hemodynamics was studied in wakeful rats, by measuring arterial pressure, pulse rate, cardiac output, and regional blood flow. Immobilization led to increases in arterial pressure (by 8-12 percent), and cardiac output (by 20-30 percent), and a decrease of total peripheral vascular resistance (by 10 percent). Blood flow increased in skeletal muscles, heart, and adrenals, but decreased in kidneys, spleen, small intestine, and testes. The observed hemodynamic changes are similar to those found in initial stages of hypertonia in man, suggesting that immobilized rats can be used for modeling this condition. I.S.

PHASES OF MUSCULAR THERMOGENESIS UNDER EXPERIMENTAL HYPERTHYROSIS [FAZY MYSHECHNOGO TERMOGENEZA PRI EKSPERIMENTAL'NOM GIPERTIREOZE]
V. I. SOBOLEV and N. T. LAPENKO (Donetskii Gosudarstvennyi Universitet, Donetsk, Ukrainian SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, March 1986, p. 381-384. In Russian. refs

Heat production in a contracting muscle of hyperthyroid rats was studied under aerobic and anaerobic conditions, for the purpose of correlating the thyroxine-effected heat production with a particular phase of contractile thermogenesis. Thermal effects of muscle contraction were measured by the method of Ivanov et al. (1976, 1978) in three groups of rats, among both aerobic and anaerobic categories: (1) those injected with thyroxin, (2) those injected with dinitrophenol (to uncouple the process of oxidative phosphorylation) and (3) controls. Among the aerobic animals, the values of thermal effect registered in both thyroxin- and dinitrophenol-injected rats were considerably higher (and by similar amounts) than in controls. In anaerobic conditions, the temperature effects of all three groups were equal and much lower than the effects observed in the aerobic category. The results suggest that the increases in heat production effected by thyroxine are related to the secondary, rather than to the initial, phase of contractile thermogenesis. I.S.

PHOTOCONVERSION FROM THE LIGHT-ADAPTED TO THE DARK-ADAPTED STATE OF BACTERIORHODOPSIN
T. KOUYAMA, R. A. BOGOMOLNI, and W. STOECKENIUS (California, University, San Francisco) Biophysical Journal (ISSN 0006-3495), vol. 48, Aug. 1985, p. 201-208. refs
(Contract NIH-GM-27057; NSG-7151)

The dark and light adaptation of the bR(trans)570 (bacteriorhodopsin) and bR(cis)550 isomers is analyzed. The equilibrium between the two bR isomers in light-adapted purple membrane films is studied in terms of the wavelength of actinic light and hydration levels. Absorption spectra observed after light adaptations with red and yellow light reveal that red light is less efficient in converting bR(cis)550 to bR(trans)570 than yellow light and the amount of bR(cis)550 in a light-adapted sample increases with decreasing hydration. The rate constants of dark and light adaptation are evaluated; the rate constant of dark adaptation is independent of the hydration level and the rate constant of light adaptation increases with hydration. The acceleration of a dark adaptation by red light is investigated; the dependence of the accelerated dark adaptation on the light intensity is discussed. The action spectrum of light adaptation in a purple membrane suspension is compared with the absorption spectrum of bR(cis)550; correlation between the spectra reveals that cis-to-transconversion is due to excitation of bR(cis)550 and the mechanism of cis-to-trans conversion in film is not affected by humidity levels. It is noted that the light-driven trans-to-cis conversion is a single photon process. The branching at M410 from the all-trans into the 13-cis photocycle is examined. I.F.

TRANSIENT PROTON INFLOWS DURING ILLUMINATION OF ANAEROBIC HALOBACTERIUM HALOBIUM CELLS
S. L. HELGERSON and W. STOECKENIUS (California, University, San Francisco) Archives of Biochemistry and Biophysics (ISSN 0003-9861), vol. 241, Sept. 1985, p. 616-627. refs
(Contract NIH-GM-27057; NSG-7151)

The roles of bacteriorhodopsin (bR), halorhodopsin (hR), and the H(+)-ATPase in the proton uptake in intact cells are examined. The Halobacterium halobium strains and solutions utilized in the experiment, and the techniques for measuring extracellular pH changes and intracellular K(+) concentrations are described. It is observed that in Halobacterium halobium strain R1, containing bR and hR, the light-driven proton uptake is divided into three transient inflows superimposed on the larger proton outflow. Under anaerobic conditions early proton uptake consists of an inflow which can be blocked with Dio-9 and a second inflow that can be eliminated by low concentrations (less than 125 nm) of triphenyltin chloride (TPT). The effects of Dio-9 and TPT on the passive proton-hydroxyl permeability of the cell membrane are investigated. A third transient light-driven proton flow observed at later times of illumination is studied. The data reveal that the first proton inflow correlates with proton dependent ATP synthesis; the second inflow is a passive uptake through an unidentified channel in response to electrogenic chloride pumping by bR and/or hR; and the third inflow correlates with the Na(+)/H(+) antiporter function. I.F.

HALOBACTERIUM DENITRIFICANS SP. NOV., AN EXTREMELY HALOPHILIC DENITRIFYING BACTERIUM
G. A. TOMLINSON (Santa Clara, University, CA), L. L. JAHNKE, and L. I. HOCHSTEIN (NASA, Ames Research Center, Moffett Field, CA) International Journal of Systematic Bacteriology (ISSN 0020-7713), vol. 36, Jan. 1986, p. 66-70. refs

Halobacterium denitrificans was one of several carbohydrate-utilizing, denitrifying, extremely halophilic bacteria isolated by anaerobic enrichment in the presence of nitrate. Anaerobic growth took place only when nitrate (or nitrite) was present and was accompanied by the production of dinitrogen. In the presence of high concentrations of nitrate (i.e., 0.5 percent), nitrous oxide and nitrite were also detected. When grown aerobically in a mineral-salts medium containing 0.005 percent yeast extract, H. denitrificans utilized a variety of carbohydrates as sources of carbon and energy. In every case, carbohydrate utilization was accompanied by acid production. Author

MEASUREMENT AND PREDICTION OF FLOW THROUGH A REPLICA SEGMENT OF A MILDLY ATHEROSCLEROTIC CORONARY ARTERY OF MAN
L. H. BACK, J. R. RADBILL, Y. I. CHO (California Institute of Technology, Jet Propulsion Laboratory, Pasadena), and D. W. CRAWFORD (Southern California, University, Los Angeles) Journal of Biomechanics (ISSN 0021-9290), vol. 19, no. 1, 1986, p. 1-17. refs
(Contract NAS7-100)

Pressure distributions were measured along a hollow vascular axisymmetric replica of a segment of the left circumflex coronary artery of man with mildly atherosclerotic diffuse disease. A large range of physiological Reynolds numbers from about 60 to 500, including hyperemic response, was spanned in the flows investigation using a fluid simulating blood kinematic viscosity. Predicted pressure distributions from the numerical solution of the Navier-Stokes equations were similar in trend and magnitude to the measurements. Large variations in the predicted velocity profiles occurred along the lumen. The influence of the smaller scale multiple flow obstacles along the wall (lesion variations) led to sharp spikes in the predicted wall shear stresses. Reynolds number similarity was discussed, and estimates of what time averaged in vivo pressure drop and shear stress might be were given for a vessel segment. Author

(Contract NSG-2137; NIH-AM-19475)

The effectiveness of orally and subcutaneously administered acetazolamide sodium in preventing denervation-induced bone loss in rats is examined. Male Sprague-Dawley rats were treated with acetazolamide either orally by incorporation of 0.2, 0.5, or 1.5 percent concentrations in their diet for 15 days, or subcutaneously by either injection of 0.5 ml/rat of a solution containing either 20 or 100 mg/ml of the drug twice daily for 15 days or by continuous infusion of 5, 50, 500, or 1000 mg/ml of acetazolamide sodium for 8 days using an osmotic minipump. The effects of acetazolamide on body weight, food consumption, and plasma calcium content are evaluated. It is observed that parenteral administration is equally effective as oral administration in partially preventing denervation-induced bone mass changes. The data reveal that approximately 50 percent protection occurs with daily doses of 1094, 129, and 8 mg/kg body weight for the oral, subcutaneous injection, and subcutaneous infusion methods, respectively. ROLE OF CARBONIC ANHYDRASE IN BONE RESORPTION INDUCED BY 1,25 DIHYDROXYVITAMIN D3 IN VITRO
G. E. HALL and A. D. KENNY (Texas Tech University, Health Science Center, Lubbock) Calcified Tissue International (ISSN 0008-0594), vol. 37, 1985, p. 134-142. refs
(Contract NSG-2137; NIH-AM-19475)

The calvaria of 5-to-6-day-old mice treated with 1 x 10 to the -8th M of 1,25(OH)2D3 in vitro for 48 hours are examined in order to study the function of carbonic anhydrase in bone resorption. Calcium concentrations in the culture were measured to assess bone resorption. It is observed that 1,25(OH)2D3 effectively stimulates bone resorption in vitro and the resorption is dose-dependent. The effects of azetazolamide on 1,25(OH)2D3-induced bone resorption are investigated. The data reveal that 1,25(OH)2D3-induced calcium release is associated with an increase in the carbonic anhydrase activity of bone, and bone alkaline phosphatase activity is decreased and acid phosphatase activity is increased in response to 1,25(OH)2D3. A two-fold mechanism for 1,25(OH)2D3-induced bone resorption is proposed; the first mechanism is an indirect activation of osteoclasts and the second involves an interaction between hormone and osteoclast precursors. I.F.

THE EFFECTS OF PROSTAGLANDIN E2 IN GROWING RATS - INCREASED METAPHYSEAL HARD TISSUE AND CORTICO-ENDOSTEAL BONE FORMATION
W. S. S. JEE, K. UENO, Y. P. DENG, and D. M. WOODBURY (Utah, University, Salt Lake City) Calcified Tissue International (ISSN 0008-0594), vol. 37, 1985, p. 148-157. refs
(Contract NIH-AM-27029; NAG2-108; DE-AC02-76EV-00119)

The role of in vivo prostaglandin E2 (PGE2) in bone formation is investigated. Twenty-five male Sprague-Dawley rats weighing between 223-267 g were injected subcutaneously with 0.3, 1.0, 3.0, and 6.0 mg of PGE2-kg daily for 21 days. The processing of the tibiae for observation is described. Radiographs and histomorphometric analyses are also utilized to study bone formation. Body weight, weights of soft tissues and bones morphometry are evaluated. It is observed that PGE2 depressed longitudinal bone growth, increased growth cartilage thickness, decreased degenerative cartilage cell size and cartilage cell production, and significantly increased proximal tibial metaphyseal hard tissue mass. The data reveal that periosteal bone formation is slowed down at higher doses of PGE2 and endosteal bone formation is slightly depressed less than 10 days post injection; however, here is a late increase (10 days after post injection) in endosteal bone formation and in the formation of trabecular bone in the marrow cavity of the tibial shaft. It is noted that the effects of PGE2 on bone formation are similar to the responses of weaning rats to PGE2. I.F.

ROLE OF CARBONIC ANHYDRASE IN BONE RESORPTION INDUCED BY PROSTAGLANDIN E2 IN VITRO
G. E. HALL and A. D. KENNY (Texas Tech University, Health Science Center, Lubbock) Pharmacology (ISSN 0031-7012), vol. 30, 1985, p. 339-347. refs
(Contract NSG-2137; NIH-AM-19475)

The possible role of carbonic anhydrase in bone resorption induced by prostaglandin E2 (PGE2) was studied using an in vitro neonatal mouse calvarial culture system. PGE2 (10 to the -6th M) was effective in stimulating resorption, as assessed by calcium release into culture media. This enhanced resorption was accompanied by significant increases in calvarial carbonic anhydrase activity over control values at 48 and 96 h. At 48 h, bones treated with PGE2 had 20 percent more carbonic anhydrase activity than controls. By 96 h, treated bones contained 79 percent more carbonic anhydrase activity than controls. PGE2-induced bone resorption was inhibited by the carbonic anhydrase inhibitor acetazolamide in a dose-dependent fashion from 10 to the -5th to 10 to the -4th M with 77 percent inhibition observed at 10 to the -4th M. The acetazolamide analogue CL 13,850 (N-t-butylacetazolamide), which does not inhibit carbonic anhydrase, failed to inhibit PGE2-induced resorption. These results are consistent with the hypothesis that carbonic anhydrase is a necessary component of the osteoclastic bone resorptive mechanism. Author

ROLE OF CARBONIC ANHYDRASE IN BONE - PLASMA ACETAZOLAMIDE CONCENTRATIONS ASSOCIATED WITH INHIBITION OF BONE LOSS
A. D. KENNY (Texas Tech University, Health Science Center, Lubbock) Pharmacology (ISSN 0031-7012), vol. 31, 1985, p. 97-107. refs
(Contract NSG-2137; NIH-AM-19475)

The effects of acetazolamide and benzolamide on bone formation are examined. Solutions of acetazolamide and benzolamide with 1 M THAM/tris(hydromethyl)aminoethane/ or without 1 M THAM were injected subcutaneous with a minipump and into the food of Sprague-Dawley rats. The data reveal that for 8-day and 12-day infusions only acetazolamide combined with 1 M THAM caused any reduction in bone loss and there were no changes in body weights, food consumption and plasma calcium and phosphorus values. Following 8 days of infusion of acetazolamide with 1 M THAM at infusion rates of 0.5, 5.0, and 50 micrograms/hr, no reduction was detected at 0.5 microgram/hr, a 30 percent reduction occurred at 5.0 micrograms/hr and a 49 percent decrease at 50 micrograms/hr. In the benzolamide experiment it was observed that 0.5 percent of the solution in the food caused no reduction in bone loss; however, infusions with benzolamide plus 1 M THAM resulted in a bone loss reduction of 30 percent at 5.0 micrograms/hr, and a 49 percent decrease at 50 micrograms/hr. Acetazolamide levels in the plasma at 50 micrograms/hr doses are calculated as ranging from 99 ng/ml-223 ng/ml and as 46 ng/ml at 5 micrograms/hr doses. I.F.

On December 14, 1983, the U.S.S.R. launched Cosmos 1514, an unmanned spacecraft carrying biological and radiation physics experiments from nine countries, including five from the United States. This was the fourth flight with U.S. experiments aboard one of the Soviet unmanned spacecraft. The Cosmos 1514 flight was limited to five days duration because it was the first nonhuman primate flight. Cosmos 1514 marked a significant departure from earlier flights both in terms of Soviet goals and the degree of cooperation between the U.S.S.R. and the United States. This flight included more than 60 experiments on fish, crawfish eggs, plants and seeds, 10 Wistar pregnant rats, and 2 young adult rhesus monkeys as human surrogates. United States specialist participated in postflight data transfer and specimen transfer, and conducted rat neonatal behavioral studies. An overview of the mission is presented focusing on preflight, on-orbit, and postflight activites pertinent to the five U.S. experiments aboard Cosmos. Author

ACUTE ORAL TOXICITY (LD50) OF GUANIDINE HYDROCHLORIDE IN RATS Final Report, 19 Jan. - 14 Feb. 1984
E. W. MORGAN, S. K. SANO, and D. W. KORTE, JR. Aug. 1985 105 p
(AD-A165747; LAIR-204; TOXICOLOGY-SER-77) Avail: NTIS HC A06/MF A01 CSCL 06T

Nitroguanidine is being evaluated by the US Army as a replacement for the nitrocellulose component of certain propellants/munitions. One of the by-products to be tested is guanidine. The hydrochloride salt was used in this evaluation of the acute toxicity of guanidine. The acute oral toxicity of guanidine hydrochloride was determined in male and female Sprague-Dawley rats by using the oral gavage single-dose method. The LD50 + or - S.E. for male rats was 556.5 + or - 29.7 mg(base)/kg and 474.6 + or - 35.3 mg(base)/kg for female rats. Clinical signs were observed in both the gastrointestinal (GI) tract and the central nervous system-neuromuscular junction (CNS-NM). Symptoms referrable to the GI tract included increased salivation, hunched posture, and diarrhea. CNS-NM signs included disorientation, increased startle reflex, hyperactivity, jumping behavior, presence of tremors/twitching and depression of grasping and righting reflexes. These results place guanidine hydrochloride in slightly toxic and moderately toxic ranges respectively. GRA

This report used a combination of physiological and anatomical approaches to elucidate the functional organization of the visual cortex in the macaque monkey. One project was a single cell analysis of texture vision, using texture patterns of the type developed by Julesz for human psychophysical studies. Many cells tested in area V2 responded to static or moving texture gradients in ways which were not predictable on the basis of responses to individual texture elements and which correlated with the preattentive discriminability of these texture patterns to human observers. A second project involved the development of a computerized technique for generating two-dimensional maps of cerebral cortex. An algorithm based on simulated annealing procedures was used to construct a complete map of primary visual cortex, thereby demonstrating its suitability for dealing with anatomical data from highly convoluted regions of cortex. A third project involved the use of voltage-sensitive dyes to monitor activity patterns in visual cortex. This technique offers great promise for analyzing the organization of large neural ensembles with high spatial and temporal resolution. GRA

QUANTIFICATION OF PILOT FATIGUE - A NEW APPROACH TO A CRUCIAL PROBLEM
J. A. PRELOOKER (Aerolineas Argentinas, Buenos Aires, Argentina) International Journal of Aviation Safety (ISSN 0264-6803), vol. 3, Sept. 1985, p. 197-204. refs

Attention is given to a method for the quantification of pilot fatigue in human factors safety management, classifying the various causative factors involved according to their role in agression/defense response mechanisms. These factors are further subdivided as causal or generative, circumstantial or catalytic, and personal or potentiating. Emphasis is given to circumstantial or catalytic factors, which are judged to be especially relevant to the task of quantification. The method has been used over the 1979-1983 period in a study conducted by the Ibero-Americal Pilots' Organization; this study revealed that blood lactic acid levels and psychometric tests based on electronic games are highly reliable indicators of flight fatigue. O.C.

PHYSIOLOGICAL PROBLEMS OF ASCENT TO ALTITUDE
R. HARDING (RAF, Institute of Aviation Medicine, Farnborough, England) International Journal of Aviation Safety (ISSN 0264-6803), vol. 3, Dec. 1985, p. 242-244.

The causes, effects, and treatment of physiological hazards associated with ascent to altitude are discussed. The use of cabin pressurization systems (maintain cabin pressure at 6000-8000 ft) and oxygen masks to counter the fall in partial pressure of oxygen that occurs during ascent is examined. The symptoms of hypoxia which include impaired judgment and memory, mental and muscular incoordination, and respiratory changes are studied. The training of aircrew to recognize the personal effects of hypoxia are conducted in hypobaric chambers. The effects of rapid decompression and compression in military and civil aircraft on the lungs, gut, teeth, middle ear cavities, and sinuses are analyzed. Methods for controlling hyperventilation which results from anxiety or emotional stress during flight are described. I.F.

WATER AND ELECTROLYTES
J. E. GREENLEAF and M. H. HARRISON (NASA, Ames Research Center, Moffett Field, CA) IN: Nutrition and Aerobic Exercise. Washington, DC, American Chemical Society , 1986, p. 107-124. refs

It has been found that the performance of the strongest and fittest people will deteriorate rapidly with dehydration. The present paper is concerned with the anatomy of the fluid spaces in the body, taking into account also the fluid shifts and losses during exercise and their effects on performance. Total body water is arbitrarily divided into that contained within cells (cellular) and that located outside the cells (extracellular). The anatomy of body fluid compartments is considered along with the effects of exercise on

body water, fluid shifts with exercise, the consequences of sweating, dehydration and exercise, heat acclimatization and endurance training, the adverse effects of dehydration, thirst and drinking during exercise, stimuli for drinking, and water, electrolyte, and carbohydrate replacement during exercise. It is found that the deterioration of physical exercise performance due to dehydration begins when body weight decreases by about 1 percent. G.R.

PHASE SHIFTING TWO COUPLED CIRCADIAN PACEMAKERS - IMPLICATIONS FOR JET LAG
P. H. GANDER, R. E. KRONAUER, and R. C. GRAEBER (NASA, Ames Research Center, Moffett Field, CA; Harvard University, Cambridge, MA) American Journal of Physiology: Regulatory, Integrative and Comparative Physiology (ISSN 0363-6119), no. 249, 1985, p. R704-R719. refs

Two Van der Pol oscillators with reciprocal linear velocity coupling are utilized to model the response of the human circadian timing system to abrupt displacements of the environmental time cues (zeitgebers). The core temperature rhythm and sleep-wake cycle simulated by the model are examined. The relationship between the masking of circadian rhythms by environmental variables and behavioral and physiological events and the rates of resynchronization is studied. The effects of zeitgeber phase shifts and zeitgeber strength on the resynchronization rates are analyzed. The influence of intrinsic pacemakers periods and coupling strength on resynchronization are investigated. The simulated data reveal that: resynchronization after a time zone shift depends on the magnitude of the shift; the time of day of the shift has little influence on resynchronization; the strength of zeitgebers affects the rate and direction of the resynchronization; the intrinsic pacemaker periods have a significant effect on resynchronization; and increasing the coupling between the oscillators results in an increase in the rate of resynchronization. The model data are compared to transmeridian flight studies data and similar resynchronization patterns are observed. I.F.

WATANABE (Tokyo Medical and Dental University, Japan) Japanese Journal of Aerospace and Environmental Medicine (ISSN 0387-0723), vol. 22, June 1985, p. 14-22. In Japanese, with abstract in English. refs

Laboratory experiments were carried out with 60 humans in an attempt to identify predictors of seasickness susceptibility. The subjects were divided into controls and a group that underwent tilting-room trials. No correlations were observed between semicircular canal imbalances and the susceptibility of seasickness. Stabilimetry measurements indicated that the subjects more susceptible to seasickness were more visually oriented than were those who did not become ill. The susceptibles also exhibited postural imbalances at lower and higher frequencies of the tilts than did those who were not susceptible. The normalcy of horizon perception during tilts and the visual-oculomotor reflex function of the susceptibles indicated that the onset of seasickness may be due to disturbances within the interaction of the visual-vestibular-somatosensory interaction. The rates and types of information available to this system are different in special environments than they are on the ground. M.S.K.

CARDIOVASCULAR RESPONSES OF WOMEN TO LOWER BODY NEGATIVE PRESSURE
M. A. B. FREY, K. L. MATHES, and G. W. HOFFLER (NASA, Kennedy Space Center; Bionetics Corp., Cocoa Beach, FL) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 531-538. refs

The effects of lower body negative pressure (LBNP) on the cardiovascular response of 20 women between 23-43 years are evaluated. Calf circumference and cardiovascular data were recorded for women in the follicular and luteal phases of the menstrual cycle at -30, -40, and -50 mm Hg LBNP. The data reveal that the two menstrual phases did not cause differences in the way women respond to LBNP. It is observed that during LBNP calf circumference is enlarged; transthoracic impedance, and heart rate are increased; stroke volume, left ventricular ejection time, the Heather Index of contractility and systolic pressure, and cardiac output are reduced; and total peripheral resistance is elevated. The experimental data are compared to Montgomery et al. (1979). It is noted that the response of women to -50 mm Hg LBNP is similar to that of men; however, women adapt to stresses on the cardiovascular system with greater heart rate adjustments. I.F.

THE EFFECT OF ANTIMOTION SICKNESS DRUGS ON HABITUATION TO MOTION
C. D. WOOD, J. E. MANNO, B. R. MANNO, R. C. ODENHEIMER, and L. E. BAIRNSFATHER (Louisiana State University, Medical Center, Shreveport) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 539-542. refs
(Contract NAS9-16801)

The mechanism which allows for increased exposure to motion and accelerates habituation is investigated. The responses of 12 male and female subjects between 18-30 years rotated once a day for 5 days on the Contraves Goerz rotating chair after receiving placebo, 10 mg d-amphetamine, 0.6 mg scopolamine with 5 mg d-amphetamine, and 1.0 mg scopolamine are studied. It is observed that with placebo the subjects performed 48 more head movements than untreated subjects, 118 more movements with d-amphetamine, 176 more with 0.6 mg scopolamine with d-amphetamine, and 186 more with 1.0 scopolamine. The data reveal that exposure to rotation increases tolerance from 88 head movements on day 2 to 159 on day 4 at 17.4 rpm and with placebo; 96 to 186 at 19.9 rpm with 10 mg d-amphetamine; 111 to 273 at 20.2 rpm with scopolamine with d-amphetamine, and 141 to 279 at 22.4 rpm with 1.0 mg scopolamine. It is noted that a combination of cholinergic blocking and norepinephrine activation action is most effective in preventing the development of motion sickness and habituation is due to the greater exposure to vestibular simulation permitted by the drugs. I.F.

A86-41781
EFFECT OF SPIRONOLACTONE ON ACUTE MOUNTAIN SICKNESS
R. F. LARSEN, P. B. ROCK, C. S. FULCO, B. EDELMAN, A. J. YOUNG (U.S. Army, Research Institute of Environmental Mecidine, Natick, MA) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 543-547. refs

This study examined the effectiveness of spironolactone as a prophylactic agent for the prevention of acute mountain sickness (AMS). Spironolactone, 25 mg PO QID, or placebo was administered to nine subjects in a double-blind, placebo-controlled, crossover design. Medication was given for 48 h prior to and during a 46-h exposure to 427 mm Hg (4570 m) in a hypobaric chamber. Six subjects demonstrated prevention of either the cerebral or respiratory symptoms of AMS during at least one segment of the altitude sojourn. Author

DISPLACEMENT THRESHOLDS IN CENTRAL AND PERIPHERAL VISION DURING TRACKING
R. F. HAINES (NASA, Ames Research Center, Moffett Field, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 548-554. refs

The effects of stimulus duration and angular velocity on a subject's judgment of displacement threshold are examined. Twenty-six male subjects between 17-45 years with uncorrected 20:20 distance acuity and normal color perception and stereopsis studied a series of forced choice, paired comparison trials in which a long, thin, collimated horizontally oriented line moved downward through 12 angles ranging from 0.6-60 arcmin and judged which stimulus moved in each pair. The displacements were produced by 0.25, 0.5, 1, 2, and 4 sec stimulus duration and 2.5, 5, 10, and 15 deg/sec angular rates. Stimulus velocity, stimulus duration, mean threshold displacement, and mean confidence results are analyzed. It is observed that displacement judgment accuracy is increased with increasing stimulus duration. The data are compared with the results of Johnson and Leibowitz (1976) and Johnson and Scobey (1982), and good correlation with the Johnson and Leibowitz data is detected. The data reveal that threshold is based on a constant stimulus velocity over this range of durations and velocities. The data are applicable to the study of the final approach to landing of medium and large commercial jet aircraft. I.F.

THE DETECTION OF VARIOUS COLOR COMBINATIONS UNDER DIFFERENT CHROMATIC AMBIENT ILLUMINATIONS
D. F. NERI, S. M. LURIA, and D. A. KOBUS (U.S. Navy, Naval Submarine Medical Research Laboratory, Groton, CT) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 555-560. refs
(Contract NAVY TASK M0100,001,1022)

The purpose of this study was to reveal the effects of ambient illumination color and various foreground/background color pairings on a choice reaction time task performed on a color CRT. Six men and two women with normal color vision served as observers in a four-alternative forced choice procedure. A small (18 arcmin visual angle) colored circle appeared in the center of one of the unmarked quadrants of the screen. The observer's task was to respond as quickly as possible to this target by pressing one of four buttons corresponding to its location. It is found that target colors that were opponent to the background colors were most quickly detected. Detection was enhanced by maximizing both brightness and chromatic contrast, but brightness contrast was much more effective. Chromatic ambient lighting which was a log unit dimmer than the target luminance had no effect on performance. Author

RESPONSE OF ENLARGED ALVEOLAR VESSELS TO ACUTE HYPOXIA
W. C. MILLER, J. G. HEARD, D. M. SUICH, and K. M. UNGER (Humana Hospital, Pulmonary Center, Webster, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 575-577. refs

Because the postulated mechanism of high altitude pulmonary edema is inhomogeneous vasconstriction and hyperperfusion of unconstricted vessels, pulmonary blood flow through vessels larger than 10 microns was determined at baseline and during acute hypoxia sufficient to reduce arterial oxygen saturation to 65 percent. Women demonstrated a uniform response of decreasing such flow, whereas responses in men were highly variable. Hyperfusion of enlarged vessels during hypoxia is not an acute phenomenon in the majority of subjects and is therefore either unique to some individuals or a subacute occurrence. Author

INTRAVENTRICULAR CONDUCTION DISTURBANCES IN FLYING PERSONNEL RIGHT BUNDLE BRANCH BLOCK
G. CANAVERIS (Instituto Nacional de Medicina Aeronautica y Espacial, Buenos Aires, Argentina) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 591-596. refs

Fourty-one cases of complete right bundle branch block detected in a population of 6915 male, civilian flyers in Argentina are studied. The block was obeserved in 17 subjects in the first ECG and in 24 after normal ECG tracing. The effects of complete right bundle branch block development on the electrical axis are analyzed. It is observed that the block is most prevalent in men in the 35-44 year range. The cause of this block is investigated. It is noted that complete right bundle branch block etiology in asymptomatic subjects is uncertain and prognosis depends on the underlying disease. I.F.

A BLITZ OF BENDS - DECOMPRESSION SICKNESS IN FOUR STUDENTS AFTER HYPOBARIC CHAMBER TRAINING
S. E. PIWINSKI, R. A. MITCHELL (U.S. Army, School of Aviation Medicine, Fort Rucker, AL), G. A. GOFORTH (U.S. Army, Flight Surgeon's Office, Fort Benning, GA), H. J. C. SCHWARTZ, and F. K. BUTLER, JR. (U.S. Navy, Panama City, FL) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, June 1986, p. 600-602.

Four cases of decompression sickness in U.S. Army parachutists, which occurred after exposure in a hypobaric chamber to 9,908.5 m followed by a rapid compression to 6,859.8 m, are analyzed. The high altitude-low opening (HALO) flight profile followed by the parachutists is described. The diagnosis and treatment of the sickness are discussed. The oxygen regulators and oxygen supply of the chamber were checked, and it was determined the regulators were functioning properly and the oxygen was pure. The cause of the decompression sickness is examined. It is noted that this HALO flight profile is not utilized by the U.S. Navy or U.S. Air Force and should be considered unsafe for future training. ON THE BIOLOGICAL HAZARD OF GALACTIC ANTINUCLEI
J. W. WILSON, L. W. TOWNSEND (NASA, Langley Research Center, Hampton, VA), and W. W. BUCK (Hampton University, VA) Health Physics (ISSN 0017-9078), vol. 50, May 1986, p. 666, 667. refs

The interaction of antinuclei in the galactic cosmic-ray beam with biological systems is studied. A nuclei-antinuclei annihilation event observed in nuclear emulsion near the end of the slowing-down trajectories of singly charged particle is discussed. An annihilation event that occurred by capture of the antinucleus into an atomic orbital followed by cascade to or near the ground atomic state and subsequent annihilation with the nuclear material of the atom is described. Microdosimetric quantities relevant to potential biological hazards are estimated. The average linear-energy-transfer spectrum for galactic cosmic ray antinuclei annihilation events in tissues is presented. It is observed that the annihilation in tissues occurs mainly in O and the heavier elements around K. I.F.

RESISTANCE, EXCHANGE, AND CAPACITANCE FUNCTIONS OF SKELETAL MUSCLE VESSELS IN ACUTE HYPOXIC HYPOXIA
B. I. TKACHENKO and Y. I. IBRAGIMOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-009) p 71-72 19 May 1986 Transl. into ENGLISH from Fiziologicheskiy Zhurnal SSSR (Leningrad, USSR), v. 81, no. 10, Oct. 1985 p 1229-1237
Avail: NTIS HC A06/MF A01

It is shown that acute hypoxia (10 percent O2 in nitrogen) increases precapillary resistance of skeletal muscle vessels in hemodynamically isolated cats. Postcapillary resistance was reduced by about 30 percent together with capillary hydrostatic pressure and the capillary filtration coefficient (CFC). Similar changes were observed in the denervated vascular bed under cross circulation. B.W.

CREW FACTORS IN FLIGHT OPERATIONS. PART 4: SLEEP AND WAKEFULNESS IN INTERNATIONAL AIRCREWS
R. C. GRAEBER Feb. 1986 113 p
(Contract NCC2-302)
(NASA-TM-88231; A-86182; NAS 1.15:88231) Avail: NTIS HC A06/MF A01 CSCL 06P

Physiological recordings of sleep and wakefulness in operating international (B-747) flight crews were obtained. Crews spent their first layover (48 h) of a trip in a sleep laboratory where standardized EEG, electro-oculograph (EOC), and electromyograph (EMG) sleep recordings were carried out whenever volunteers chose to sleep. During periods of wakefulness they underwent multiple sleep latency tests every 2 h in order to assess daytime drowsiness. The same standardized recordings were carried out at a home-based laboratory before departure. Approximately four crews each participated in flights over 7 to 9 time zones on five routes. All participants were encouraged to use whatever sleep-wake strategies they thought would provide them with the most satisfactory crew rest. Overall, layover sleep quality was not seriously disturbed, but eastward flights produced greater sleep disruption. The contributors of individual factors and the usefulness of various sleep strategies are discussed in the individual laboratory reports and in an operational summary. Author

EFFECTS OF SIMULATED WEIGHTLESSNESS ON REGIONAL BLOOD FLOW SPECIFICALLY DURING CARDIOVASCULAR STRESS Final Report
D. C. HARRISON 1986 15 p
(Contract NCC2-126)
(NASA-CR-177117; NAS 1.26:177117) Avail: NTIS HC A02/MF A01 CSCL 06S

Significant changes in the cardiovasular system of humans and animals have been observed following exposure to prolonged periods of weightlessness during space flight. Although adaption to weightlessness is relatively uncomplicated, marked changes in cardiovascular deconditioning become evident upon return to normal gravity, including orthostatic hypotension and tachycardia. Some evidence that myocardial degeneration occurs has been demonstrated in animals who have been immobilized for two months. Also, evidence of possible loss of myocardial mass following manned space flight has been obtained by means of echocardiographic studies. These findings have serious implications in light of the increasing frequency and duration of Space Shuttle missions and the prospect of extended space station missions in the future. A number of both military and civilian investigators, including middle-aged scientists, will probably encounter prolonged periods of weightlessness. It has been imperative, therefore, to determine the effects of prolonged weightlessness on cardiovascular deconditioning and whether such effects are cumulative or reversible. The research project conducted under NASA Cooperative Agreement NCC 2-126 was undertaken to determine the effects of prolonged simulated weightlessness on regional blood flow. Research results are reported in the three appended publications. Author

SKELETAL RESPONSE TO SHORT-TERM WEIGHTLESSNESS Final Technical Report
T. J. WRONSKI and E. R. MOREY-HOLTON 1986 16 p
(Contract NCC2-337)
(NASA-TM-88778; NAS 1.15:88778) Avail: NTIS HC A02/MF A01 CSCL 06S

Male Sprague Dawley rats were placed in orbit for 7 days aboard the space shuttle. Bone histomorphometry was performed in the long bones and lumbar vertebrae of flight rats and compared to data derived from ground based control rats. Trabecular bone mass was not altered during the first week of weightlessness. Strong trends were observed in flight rats for decreased periosteal bone formation in the tibial diaphysis, reduced osteoblast size in the proximal tibia, and decreased osteoblast surface and number in the lumbar vertebra. Histologic indices of bone resorption was relatively normal in flight rats. The results indicate that 7 day of weightlessness are not of sufficient duration to induce histologicaly

detectable loss of trabecular bone in rats. However, cortical and trabecular bone formation appear to be diminished during the first week of space flight. Author

CARDIAC RESERVE DURING WEIGHTLESSNESS SIMULATION AND SHUTTLE FLIGHT Final Report, 15 Oct. 1984 - 14 Oct. 1985
A. L. GOLDBERGER Oct. 1985 32 p
(Contract NCC2-335)
(NASA-CR-177085; NAS 1.26:177085; LR-7552) Avail: NTIS HC A03/MF A01 CSCL 06S

Bedrest deconditioning is suspected to reduce cardiac function. However, quantitation of subtle decreases in cardiac reserve may be difficult. Normal subjects show considerable variability in heart rate response, reflected by a relatively broadband interbeat interval power spectrum. We hypothesized that the deconditioning effects of bedrest would induce narrowing of this spectrum, reflecting a reduction in the autonomically-modulated variability in heart rate. Ten aerobically conditioned men (average 35-50 years) underwent orthostatic tolerance testing with lower body negative pressure pre-bedrest and after 10 days of bedrest, while on placebo and after intravenous atropine. Spectra were derived by Fourier analysis of 128 interbeat interval data sets from subjects with sufficient numbers of beats during matched periods of the protocol. Data suggest that atropine unmasks the deconditioning effect of bedrest in athletic men, evidenced by a reduction in interbeat interval spectral power compared with placebo. Spectral analysis offers a new means of quantitating the effects of bedrest deconditioning and autonomic perturbations on cardiac dynamics. Author

WEIGHTLESSNESS SIMULATION: PHYSIOLOGICAL CHANGES IN FAST AND SLOW MUSCLE Final Technical Report, 1 Jun. 1984 - 31 May 1985
W. D. DETTBARN 31 May 1985 22 p
(Contract NAG2-301)
(NASA-CR-176945; NAS 1.26:176945) Avail: NTIS HC A02/MF A01 CSCL 06P

The role of the intact motor system in the maintenance of normal skeletal muscle structure and function were examined. Using a multidisciplinary approach, changes in slow and fast muscle were examined in response to three experimental paradigms: motor nerve denervation, spinal cord section, and nonsurgically induced disuse (or hypokinesia). The effects of use and disuse on the free radical scavenging system in relation to the mitochondrial oxidative metabolism in fast twitch and slow twitch muscle were also investigated. The effects of denervation and reinnervation on cuprozinc superoxide dismutase, manganosuperoxide dismutase, glutathione peroxidase, fumarase, cytochrome c oxidase, and GSH-peroxidase were studied. Changes in biochemical, histochemical, and physiological characteristics of the predominately slow (type 1) soleus and predominately fast (type 2) extensor digitorum longus are correlated with electromyogram assessment of muscle activation. EVALUATION OF THE USE OF HYDROGEN-OXYGEN AS A BREATHING GAS IN DEEP-SEA DIVING
P. EDEL 1986 31 p
(Contract N00014-85-C-0592)
(AD-A165797) Avail: NTIS HC A03/MF A01 CSCL 06K

An attempt is made to define the state-of-the-art for the use of Hydrogen-Oxygen mixtures for diving operations. Information relative to past and current research efforts in the U.S. and foreign countries is compiled. This information is utilized to identify possible areas of application with this mixture in appropriate conditions and in areas in which hydrogen-oxygen mixtures could offer physiological advantages not possible with currently used breathing mixtures. Further research is needed prior to operational use of this mixture, and recommendations for current and future research and development needs are included in this report. Hydrogen-oxygen mixtures have shown sufficient advantage to warrant further research. Present experience indicates that H2-02 mixtures offer some potential advantages over present helium-oxygen bounce diving applications for operations where on-site gas storage space is limited and/or resupply of breathing gas mixtures are a potential problem. Present experience indicates that H2-He-02 mixtures offer some potential advantages over present helium-oxygen saturation diving operations at depths where increased diver performance and reduction of breathing resistance is an important factor. Hydrogen narcosis effects and decompression requirements are the major primary physiological research areas requiring investigation prior to possible applications of such mixtures. GRA

METHOD FOR THE DETERMINATION OF RESPIRATORY WORK IN PROTECTIVE MASKS
I. BERGLUND and K. NYREN Jun. 1985 27 p In SWEDISH; ENGLISH summary
(FOA-C-40213-C2; ISSN-0347-2124; ESA-86-97042) Avail: NTIS HC A03/MF A01; Research Inst. of National Defence, Stockholm, Sweden KR 50

A method for estimating respiratory work by measuring flow and pressure in a protective mask on a dummy head, during inhalation and exhalation, with a respiratory pump is described. Data acquisition, evaluation, and graphical presentation for a respiratory cycle are performed with a laboratory computer. Malfunction of the inlet valve may lead to leakage so that expired air wrongly passes through the filter. Actually the user of the mask would compensate for this by increasing the respired volume, thus increasing the respiratory work. In the described method this leakage indicates, on the contrary, lower respiratory workload. ESA

MTF'S AND WIENER SPECTRA OF RADIOGRAPHIC SCREEN-FILM SYSTEMS. VOLUME 2: (INCLUDING SPEEDS OF SCREENS, FILMS AND SCREEN-FILM SYSTEMS)
K. DOI, Y. KODERA, L. N. LOO, H. P. CHAN, and Y. HIGASHIDA Mar. 1986 110 p Sponsored by FDA
(Contract PHS-223-78-6003; PHS-223-81-6014)
(PB86-184934; HHS/PUB/FDA-86-8257-VOL-2; FDA/CDRH-86/103-VOL-2) Avail: NTIS HC A06/MF A01 CSCL 06E

Volumes I and II of the report constitute a consistent, quantitative evaluation of the physical imaging performance of most currently available radiographic screens and films. Volume I (HHS Publication FDA 82-8187, April 1982) reported measurements of MTF's and Wiener spectra of a large number of screen-film systems and described the methodology. Volume II reports measurement (using the same methodology) of MTF's and Wiener spectra of additional systems. Volume II also reports absolute speeds (determined according to ANSI Standard PH 2.43-1982) for selected systems and relative speeds for a large group of screens and films; methodology for these measurements is described in detail. SIMULATORS; PROCEEDINGS OF THE CONFERENCE, NORFOLK, VA, MARCH 3-8, 1985
J. S. GARDENIER, ED. (U.S. Coast Guard, Washington, DC) La Jolla, CA, Society for Computer Simulation (Simulation Series. Volume 16, No. 1, 1985), 1985, 200 p. For individual items see A86-40477 to A86-40486.

Flight simulator upgrades and modifications are considered along with relationships among aircrew performance measures for evaluating flight simulator training effectiveness, representation of ground reaction forces as a function of the position of the center of pressure during gait, dynamic process simulators for steel rolling plants, and the simulation of ferrofluidic seals for optimum design. Attention is also given to enhancement options for improving the effectiveness of training with nuclear power plant simulators, human performance simulation, the integration of surface warfare simulation with instructional training techology, training simulator evaluation, and numerical simulation of two-phase flow in pipe networks. Other topics explored are related to the use of simulators for the training and evaluation of nuclear plant personnel, the use of standard computer terminals for the instructor console on a real-time nuclear reactor training simulator, and the importance of color displays in visual flight simulation. G.R.

RELATIONSHIPS AMONG AIRCREW PERFORMANCE MEASURES FOR EVALUATING FLIGHT SIMULATOR TRAINING EFFECTIVENESS
R. T. NULLMEYER (USAF, Human Resources Laboratory, Williams AFB, AZ) and M. R. ROCKWAY (Dayton, University, Williams AFB, AZ) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 13-17.

Transfer of training from the C-130E Weapon System Trainer (WST) to C-130E aircraft was evaluated for approaches, landings, and engine-out go-arounds. Two groups of student copilots with no previous experience in the C-130 aircraft were used as subjects. One group (test) received training in the C-130 WST prior to transferring to the aircraft while the other group (control) did not. Overall student proficiency, amount of instructor assistance, and selected flight parameters were monitored during the performance of each task in the aircraft. Several variations of the above measures were analyzed to compare the inflight performance of the two groups. In general, the test group received significantly higher ratings of overall proficiency and required less instructor assistance in the aircraft than did the control group. The selected flight parameters, on the other hand, were insensitive to the differences between the two groups. The implications of these findings for understanding the nature of aircrew learning and the determination of flight simulator training effectiveness are discussed. Author

HUMAN PERFORMANCE SIMULATION - COMBINING THE DATA
V. J. GAWRON (Calspan Corp., Buffalo, NY) and J. POLITO (Sperry Corp., Sugarland, TX) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 61-65. refs
(Contract MDA903-81-C-AA06)

As part of a recent program to develop computer models of human performance and decision-making (Model of Operator Performance in Air Defense System, MOPADS), a method was developed to combine human performance data from multiple sources into a single measure of predicted task performance time or probability. In the case where multiple equations are relevent to the current state being simulated, the derived completion times or probabilities are combined in a weighted equation to produce a single derived probability. The weight for each calculated time or probability is the number of independent variables represented in the moderator equation from which that particular value was calculated. This approach is based on the law of diminishing returns which states that the inclusion of more predictor variables in a regression equation will increase the total amount of variance in the data accounted for by the equation; however, each new variable added will account for a lesser portion of the total variance than any of the variables that preceded it. Author

A86-40482
RESOLUTION AND SCENE DETAIL PERFORMANCE OF THE VISUAL SYSTEM IN FLIGHT SIMULATION
R. E. CLAPP (Boeing Military Aircraft Co., Wichita, KS) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 169-173. refs

Engineers and designers working in simulation are frequently unaware of many of the aspects of the physical processes of vision and usually completely unaware of the psychophysical processes connected with how the human vision perceives the simulated (or real) world. This paper considers the human visual parameters (resolution, detection levels of scene detail, luminosity effects, 'traps' of vision, various psychophysical processes, etc.), how these parameters interact with the presented visual simulation, and how the proper application of these parameters to the techniques of design or visual simulations could produce more acceptable systems. Author

A86-40484
IMPORTANCE OF COLOR DISPLAYS IN VISUAL FLIGHT SIMULATION
R. E. CLAPP (Boeing Military Aircraft Co., Wichita, KS) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 179-182. refs

The characteristics of color and the advantages of its use in displays are considered. Attention is given to the three dimensions of color, variation of hue discrimination with illuminance, optimum luminance for displaying color, variation in color discrimination, target detection as a function of resolution and as a function of contrast, a summary of color effects, the resolution of displays, and resolution requirements. It is concluded that despite the poorer detection level resolution of color display compared to black and white displays, color displays provide better recognition and identification of objects in the display. Color displays are more acceptable to observers due to a closer approach to real world conditions (more realism). It is pointed out that the major advantage of the use of color displays is related to an increase in the information levels of the display. G.R.

THE HUMAN DUAL VISUAL SYSTEMS - THEIR IMPORTANCE IN SIMULATION
R. E. CLAPP (Boeing Military Aircraft Co., Wichita, KS) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 183-187. refs

The human visual system possesses a capability of dual mode operation in sensing the visual environment. These modes of operation are given the names of 'Ambient Visual Mode', and 'Focal Visual Mode'. The ambient mode mediates the wide field of view scene organization and intersensory areas, while the focal mode supplies the detail structure. The operation of the dual modes and their interrelationship establish the visual world as perceived by the observer. This paper discusses the operation of each of the visual modes, their interrelationship, their importance of what we perceive, and how these factors may be employed in improving visual display systems. THE PERSONALITY AND PHYSIQUE OF UNDERGRADUATE AVIATION MAJORS
I. C. ADAMS (University College of Arts, Science and Education, Manama, Bahrain) and W. BOLONCHUK (North Dakota, University, Grand Forks) International Journal of Aviation Safety (ISSN 0264-6803), vol. 3, Dec. 1985, p. 280-283. refs

The personality and physique of 31 male undergraduate aviation majors and 100 male nonaviation majors at the University of North Dakota, U.S., are evaluated. The Cattell sixteen personality factor questionnaire and the Heath-Carter somatotype method were utilized in this study. The data reveal that the aviation majors scored higher than nonaviation majors in ego strength, dominance, surgency, conscientiousness, venturesomeness, self-sentiment, experimenting, pathemia, and independence, and lower than nonmajors in tenseness. It is observed that both groups were basically mesomorphic with secondary endomorphy; however, the aviation majors were lower in mesomorphy and ectomorphy than nonmajors. I.F.

AIR FORCE USES COMPUTER LESSONS TO TRAIN INSTRUCTORS, FLIGHT CREWS
Aviation Week and Space Technology (ISSN 0005-2175), vol. 124, June 2, 1986, p. 54, 55, 57.

Two engineering research demonstrators are being used at Dyess Air Force Base to train instructors and operating crews of the B-1B bomber, over the course of 272 hrs of computer-aided instruction. Each real time, man-in-the-loop simulator encompasses all B-1B crew stations, which are those of pilot and copilot on the flight deck, and offensive systems officer and defensive systems officer in the aft position. To aid the learning process, colors of the simulator graphics are coordinated with those used in the instruction texts. O.C.

COMPONENTS OF SPATIAL ABILITY Final Report, Jun. 1981 - Sep. 1984
J. W. PELLEGRINO, D. L. ALDERTON, and J. W. REGIAN 24 Mar. 1986 68 p
(Contract N00014-81-C-0616; NR PROJ. RR0-4204)
(AD-A165694) Avail: NTIS HC A04/MF A01 CSCL 05J

The goal of this project was to identify information processing components of spatial ability. A summary paper is presented that reviews major psychometric analyses of spatial ability as they relate to theories of information processing. The primary emphasis in the review is of studies isolating individual differences in components of spatial information processing. Research is also reviewed on the acquisition of spatial processing skills. The final section considers implications of this line of research for issues of assessment, particularly as it relates to modern technologies for testing. GRA

INEXPERT CALIBRATION OF COMPREHENSION Technical Report, Sep. - Dec. 1985
A. M. GLENBERG and W. EPSTEIN 1 Mar. 1986 48 p
(Contract N00014-85-K-0644; NR PROJ. RR0-4206)
(AD-A166701; WCER-86-3) Avail: NTIS HC A03/MF A01 CSCL 05J

Students with a wide range of coursework in physics or music theory read expositions in both domains. After reading, for each text students provided a judgment of confidence in ability to verify inferences based the central principle of the text. The primary dependent variable was calibration of comprehension, the degree of association between confidence and performance in the inference test. Two results of most interest were expertise in a domain was inversely related to calibration and subjects were well-calibrated across domains. Both of these results can be accommodated by a self-classification strategy: Confidence judgments are based on self-classification as expert or non-expert in the domain of the text, rather than an assessment of the degree to which the text was comprehended. Because self-classifications are not well differentiated within a domain, application of the strategy by experts produces poor calibration within a domain. Nonetheless, because self-classification is generally consistent with performance across domains, application of the strategy produces calibration across domains. GRA

EFFECT OF TIME SPAN AND TASK LOAD ON PILOT MENTAL WORKLOAD
S. L. BERG and T. B. SHERIDAN Mar. 1985 150 p
(Contract NAG2-227)
(NASA-CR-177099; NAS 1.26:177099) Avail: NTIS HC A07/MF A01 CSCL 05H

Two sets of experiments were run to examine how the mental workload of a pilot might be measured. The effects of continuous manual control activity versus discrete assigned mental tasks (including the length of time between receiving an assignment and executing it) were examined. The first experiment evaluated the strengths and weaknesses of measuring mental workload with an objective perforamance (altitude deviations) and five subjective ratings (activity level, complexity, difficulty, stress, and workload). The second set of experiments built upon the first set by increasing workload intensities and adding another performance measure: airspeed deviation. The results are discussed for both low and high experience pilots. B.G.

HESITATIONS IN CONTINUOUS TRACKING INDUCED BY A CONCURRENT DISCRETE TASK
S. T. KLAPP, P. A. KELLY, and A. NETICK 1985 40 p
(Contract NCC2-223)
(NASA-CR-177019; NAS 1.26:177019) Avail: NTIS HC A03/MF A01 CSCL 05I

Subjects performed a continuous visually-guided pursuit tracking task with the right hand. From time to time (intervals averaging 30 sec) an auditory tone appeared signaling the subjects to perform a discrete response with the left hand. The presence of this tone was frequently associated with a hesitation in right-hand tracking which lasted 1/3 sec or longer. The rate of occurrence of these hesitations was about the same when the left-hand response involved a choice between competing responses as when the left hand responded in a predetermined direction. Hesitations occurred for three different mechanical tracking manipulanda using different controlling muscles, and appeared to be due to freezing rather than to relaxation of muscular action. The rate of occurrence of hesitations declined with practice, and this improvement in right-hand performance was accompanied by an improvement in performance of the concurrent left-hand response. The presence of hesitations, and their reduction with practice, can be interpreted within several viewpoints. Author

MODEL-BASED APPROACHES FOR PARTITIONING SUBJECTIVE WORKLOAD ASSESSMENTS Final Technical Report
J. LYMAN Feb. 1986 19 p Presented at the Annual Conference of Manual Control, Jun. 1986
(Contract NAG2-216)
(NASA-CR-177030; NAS 1.26:177030) Avail: NTIS HC A02/MF A01 CSCL 05I

Modified Petri nets (MPNs) were investigated as a workload modeling tool. The MPN model was screened for general sensitivity to changes in workloads. A canonical correlation was conducted between the MPN parameters and the workload ratings. The results of the canonical correlation indicated that the MPN model of the experimental task represented the task components that influenced the subjective workload. B.G.

THE EFFECTS OF EXPRESSIVITY AND FLIGHT TASK ON COCKPIT COMMUNICATION AND RESOURCE MANAGEMENT Final Report, 1 Aug. 1982 - 31 Aug. 1985
R. S. JENSEN Jun. 1986 95 p
(Contract NCC2-206; RF PROJ. 76327/714794)
(NASA-CR-177036; NAS 1.26:177036; APL-86-1) Avail: NTIS HC A05/MF A01 CSCL 05I

The results of an investigation to develop a methodology for evaluating crew communication behavior on the flight deck and a flight simulator experiment to test the effects of crew member expressivity, as measured by the Personal Attributes Questionnarie, and flight task on crew communication and flight performance are discussed. A methodology for coding and assessing flight crew communication behavior as well as a model for predicting that behavior is advanced. Although not enough crews were found to provide valid statistical tests, the results of the study tend to indicate that crews in which the captain has high expressivity perform better than those whose captain is low in expressivity. There appears to be a strong interaction between captains and first officers along the level of command dimension of communication. The PAQ appears to identify those pilots who offer disagreements and inititate new subjects for discussion. Author

THE IMPORTANCE OF STEREOSCOPIC IMAGERY IN FLIGHT SIMULATION
R. CLAPP (Boeing Military Airplane Co., Wichita, KS) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-6, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 174-178. refs

It is pointed out that one of the main problems in vision is the geometrical interpretation which an observer derives from the visual scene. The present paper is concerned with the various aspects of stereoscopic vision, taking into account applications to visual displays, and methods for producing stereoscopic images. Attention is given to problems of distance judgment, binocular vision, stereoscopic systems, and binocular vision in simulation. Judgment requirements related to aerial refueling are considered along with formation flight training, and low level flight training. Pilot and aircrew judgment of size and distance is found to be critical in many training scenarios, and stereoscopic display is particularly required for final training in initial training tasks and for continuation training. G.R.

VISUAL DISPLAY REQUIREMENTS FOR BOOM OPERATOR TRAINING IN AERIAL REFUELING
R. E. CLAPP (Boeing Military Aircraft Co., Wichita, KS) IN: Simulators; Proceedings of the Conference, Norfolk, VA, March 3-6, 1985 . La Jolla, CA, Society for Computer Simulation, 1985, p. 188-192. refs

This paper discusses the performance parameters of the visual system display for boom operator training in aerial refueling including field of view, resolution, brightness, contrast, color, stereopsis, image detail and display rates. These parameters are based upon extensive experience and study in aerial refueling operations and simulation. Such display systems have application in other simulation scenarios involving manipulation operations. Author

RECENT ADVANCES IN TELEOPERATION - IMPLICATIONS FOR THE SPACE STATION
M. M. CLARKE (Rockwell International Corp., Downey, CA) IN: Space tech; Proceedings of the Conference and Exposition, Anaheim, CA, September 23-25, 1985 . Dearborn, MI, Society of Manufacturing Engineers, 1985, p. 4-1 to 4-10. refs

The paper describes recent advances in teleoperation in nonaerospace hostile environments and discusses their applicability to space-related teleoperation. For example, remotely maintainable manipulators can increase system availability while continuing to exclude the crew from the hostile environment. Force reflection and supervisory control can reduce the operator's fatigue and workload. The Universal Master Controller can increase the system control flexibility. Author

EVA SUIT GLOVE DESIGN
B. PEACOCK, R. SHAMBAUGH, F. STRITZ (Oklahoma, University, Norman), and J. HORDINSKY (FAA, Oklahoma City, OK) IN: Space tech; Proceedings of the Conference and Exposition, Anaheim, CA, September 23-25, 1985 . Dearborn, MI, Society of Manufacturing Engineers, 1985, p. 8-14 to 8-25. refs

Traditional testing of gloves has been a subjective study by experienced designers and astronauts. An objective series of standardized tests were developed to test dexterity, strength, and tactility in a single-handed vacuum chamber. A finite element analysis simulates the effects of restraints and pleats at various glove pressures. For the finger, the incorporation of a lateral restraint and pleats on both the front and back of the joint led to near zero resistance to bending. A total glove model also was developed. A process was developed which used a computer to control the movement of an air jet to lay down continuous fiber on a fine mesh which overlaid a suction mechanism. With this technique, gloves can be quickly and economically produced with infinite selectibility of size, construction, and materials. Author

THE WPI SPACE GLOVE DESIGN PROJECT
W. W. DURGIN, A. H. HOFFMAN, H. K. AULT, and F. C. LUTZ (Worcester Polytechnic Institute, MA) IN: Space tech; Proceedings of the Conference and Exposition, Anaheim, CA, September 23-25, 1985 . Dearborn, MI, Society of Manufacturing Engineers, 1985, p. 8-26 to 8-41. NASA-supported research.

Worcester Polytechnic Institute (WPI) was one of four colleges and universities awarded NASA grants for student design and development of an improved glove for space suits. This paper traces the design, development and testing of the WPI prototype glove. Test results showed that the glove did not significantly limit hand and finger motion when pressurized at 8 psi, except in the spherical grip mode. This project demonstrated that problems originating from space technology provide excellent vehicles for student learning and can generate creative solutions. Author

ADVANCED EVA OPERATION ON-ORBIT TASKS AND SERVICES
F. J. ABELES and R. H. SCHAEFER (Grumman Corp., Bethpage, NY) IN: Space Systems Technology Conference, San Diego, CA, June 9-12, 1986, Technical Papers . New York, American Institute of Aeronautics and Astronautics, 1986, p. 60-68.
(AIAA PAPER 86-1175)

Methods for improving astronauts' productivity during extravehicular activity (EVA) are described. EVA operations involve construction, servicing, and maintenance of the Space Shuttle and servicing and maintenance of the Shuttle's payloads. EVA cycle tasks must be performed in the proper sequence and it is estimated that an astronaut can perform up to 6.5 hrs of EVA productive work during one EVA and a maximum of 19.5 hrs of EVA productive work per astronaut can be accomplished in a week. The utilization of dedicated work stations, a dedicated translation system, properly designed equipment, and job performance aids, such as the helmet mounted display (HMD), to increase EVA productive time is studied. The function and advantages of the HMD are examined. The need to consider the astronaut's comfort during performance of EVA tasks is discussed. I.F.

A DISCRETE CONTROL MODEL OF OPERATOR FUNCTION - A METHODOLOGY FOR INFORMATION DISPLAY DESIGN
C. M. MITCHELL (Georgia Institute of Technology, Atlanta) and R. A. MILLER (Ohio State University, Columbus) IEEE Transactions on Systems, Man, and Cybernetics (ISSN 0018-9472), vol. SMC-16, May-June 1986, p. 343-357. refs

Recent advances in computer technology and the changing rule of the human in complex systems require changes in design strategies for information displays. The use of discrete control models to represent the human operator's cognitive and decision making activities is described. The analytic procedures required to build a discrete control model show promise as a basis of a design methodology for the definition of an information display system for supervisory control tasks. The discrete control modeling procedures and their application for a simulated system is demonstrated. Author

REVERSE OSMOSIS WATER PURIFICATION SYSTEM
H. G. AHLSTROM, P. S. HAMES, and F. J. MENNINGER *In its* The Telecommunications and Data Acquisition Report 10 p 15 May 1986
Avail: NTIS HC A10/MF A01 CSCL 06K

A reverse osmosis water purification system, which uses a programmable controller (PC) as the control system, was designed and built to maintain the cleanliness and level of water for various systems of a 64-m antenna. The installation operates with other equipment of the antenna at the Goldstone Deep Space Communication Complex. The reverse osmosis system was designed to be fully automatic; with the PC, many complex sequential and timed logic networks were easily implemented and are modified. The PC monitors water levels, pressures, flows, control panel requests, and set points on analog meters; with this information various processes are initiated, monitored, modified, halted, or eliminated as required by the equipment being supplied pure water. TORSO SIZING RING CONSTRUCTION FOR HARD SPACE SUIT Patent
H. C. VYKUKAL 10 Jun. 1986 9 p Filed 20 Dec. 1984 Supersedes N85-21987 (23 - 12, p 1910)
(NASA-CASE-ARC-11616-1; US-PATENT-4,593,415; US-PATENT-APPL-SN-684193; US-PATENT-CLASS-2-2.1A; US-PATENT-CLASS-2-2.1R; US-PATENT-CLASS-128-202.11; US-PATENT-CLASS-414-1; US-PATENT-CLASS-414-5; US-PATENT-CLASS-414-7; US-PATENT-CLASS-414-8) Avail: US Patent and Trademark Office CSCL 06Q

A hard suit for use in space or diving applications having an adjustable length torso covering that will fit a large variety of wearers is described. The torso covering comprises an upper section and a lower section which interconnect so that the covering will fit wearers with short torsos. One or more sizing rings may be inserted between the upper and lower sections to accomodate larger torso sizes as required. Since access of the astronaut to the torso covering is preferably through an opening in the back of the upper section (which is closed off by the backpack), the rings slant upward-forward from the lower edge of the opening. The lower edge of the upper covering section has a coupler which slants upward-forward from the lower edge of the back opening. The lower torso section has a similarly slanted coupler which may interfit with the upper section coupler to accomodate the smallest torso size. One or more sizing rings may be inserted between the coupler sections of the upper and lower torso sections to accomodate larger torsos. Each ring has an upper coupler which may interfit with the upper section coupler and a lower coupler which may interfit with the lower section coupler. NASA

ELBOW AND KNEE JOINT FOR HARD SPACE SUITS Patent
H. C. VYKUKAL 8 Jul. 1986 13 p Filed 30 Dec. 1984 Supersedes N85-20666 (23 - 11, p 1697)
(NASA-CASE-ARC-11610-1; US-PATENT-4,598,427; US-PATENT-APPL-SN-684190; US-PATENT-CLASS-2-2.1A; US-PATENT-CLASS-2-2.1R; US-PATENT-CLASS-285-168; US-PATENT-CLASS-138-120) Avail: US Patent and Trademark Office CSCL 06Q

An elbow or knee joint for a hard space suit or similar usage is formed of three serially connected rigid sections which have truncated spherical configurations. The ends of each section form solid geometric angles, and the sections are interconnected by hermetically sealed ball bearings. The outer two sections are fixed together for rotation in a direction opposite to rotation of the center section. A preferred means to make the outer sections track each other in rotation comprises a rotatable continuous bead chain which engages sockets circumferentially spaced on the facing sides of the outer races of the bearings. The joint has a single pivot point and the bearing axes are always contained in a single plane for any articulation of the joint. Thus flexure of the joint simulates the coplanar flexure of the knee or elbow and is not susceptible to lockup. NASA

N86-28620* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
SHOULDER AND HIP JOINT FOR HARD SPACE SUITS Patent
H. C. VYKUKAL 17 Jun. 1986 11 p Filed 20 Dec. 1984 Supersedes N85-21986 (23 - 12, p 1910)
(NASA-CASE-ARC-11543-1; US-PATENT-4,594,734; US-PATENT-APPL-SN-684192; US-PATENT-CLASS-2-2.1A; US-PATENT-CLASS-414-7; US-PATENT-CLASS-285-168; US-PATENT-CLASS-138-120) Avail: US Patent and Trademark Office CSCL 06Q

Shoulder and hip joints for hard space suits are disclosed which are comprised of three serially connected truncated spherical sections, the ends of which converge. Ball bearings between the sections permit relative rotation. The proximal end of the first section is connected to the torso covering by a ball bearing and the distal end of the outermost section is connected to the elbow

or thigh covering by a ball bearing. The sections are equi-angular and this alleviates lockup, the condition where the distal end of the joint leaves the plane in which the user is attempting to flex. The axes of rotation of the bearings and the bearing mid planes are arranged to intersect in a particular manner that provides the joint with a minimum envelope. In one embodiment, the races of the bearing between the innermost section and the second section is partially within the inner race of the bearing between the torso and the innermost spherical section further to reduce bulk.

EVALUATION OF WATER STERILIZING TABLETS

G. F. THOMSON, K. W. JAMES, G. E. DRIVER, and A. T. HANCOCK Aug. 1985 22 p

(AD-A165806; AFFSE-2/85) Avail: NTIS HC A02/MF A01 CSCL 13B

Water sterilizing tablets were evaluated for their efficiency in killing micro-organisms. The effect of inhibitors and palatability were investigated. The effect of long term use is discussed. The water sterilizing tablet recommended for disinfection of personal drinking water is the Potable Aqua tablet. The Afses is not recommended because of its need for a quiescent period. The Puritabs is not recommended because of its inability to achieve the required 99.9% kill in heavily contaminated water, especially at alkaline pH values. Fortified beverage powders, which are effective detasting agents, will inactivate the disinfecting agent if added before completion of the recommended contact period.

SUIT PENETRATION STUDY: PRELIMINARY ANALYSIS OF FLOW ABOUT A CIRCULAR CYLINDER

R. C. MCCALLEN and S. B. SUTTON 27 Nov. 1985 28 p

(Contract W-7405-ENG-48)

(DE86-005760; UCID-20636) Avail: NTIS HC A03/MF A01

The flow of atomized droplets around a circular cylinder (representing a human torso) is modeled. Two different computer codes have been used to generate solutions for the flow field: a finite difference code and a vertex method code. The finite difference code, CONCHAS-SPRAY (C-S), handles unsteady, viscous, compressible flow. The second code, KPD3, simulates unsteady, high Reynolds number, incompressible separated flow with an inviscid outer flow. The specific flow problem considered is described, followed by the results of a literature search for experimental data.

SHOULDER AND HIP JOINTS FOR HARD SPACE SUITS AND THE LIKE Patent

H. C. VYKUKAL 8 Jul. 1986 12 p Filed 20 Aug. 1984 Supersedes N84-33021 (22 - 22, p 3633)

(NASA-CASE-ARC-11534-1; US-PATENT-4,598,428; US-PATENT-APPL-SN-642602; US-PATENT-CLASS-2-2.1A; US-PATENT-CLASS-285-168; US-PATENT-CLASS-285-184; US-PATENT-CLASS-285-227; US-PATENT-CLASS-138-120; US-PATENT-403-164) Avail: US Patent and Trademark Office CSCL 06Q

For use in hard space suits and the like, a joint between the torso covering and the upper arm covering (i.e., shoulder) or between the torso covering and upper leg covering (i.e., hip) is disclosed. Each joint has an outer covering and a inner covering. The outer covering has plural perferably truncated toroidal sections decreasing in size proceeding outwardly. In one embodiment at each joint there are two bearings, the first larger than the second. The outer race of the larger bearing is attached to the outer edge of the smaller end of each section and the inner race of the larger bearing is attached to the end wall. The inner race of the smaller bearing is attached to the end wall. The outer race of the smaller bearing is attached to the larger end of the next section. Each bearing hask appropriate seals. Between each section is a rubber ring for the comfort of the wearer. Such rubber rings have radial flanges attached to the inner races of two adjacent bearings. Matching semicircular grooves are formed in the abutting overlapping surfaces. Bellows-like inner walls are also provided for each section fixed at one end to an inner cylindrical flange and, at the opposite end, to an end wall. Each outer section may rotate 360 deg relative to the next outer section, whereas the bellows sections do not rotate, but rather expand or contract locally as the rigid sections rotate relative to each other.

THE SCIENTIFIC/ENGINEERING WORKSTATION EXPERIMENT: PRELIMINARY RESULTS, CONCLUSIONS AND RECOMMENDATIONS Progress Report, Apr. - Aug. 1984
R. T. VANESELTINE and M. B. MARQUARDT Dec. 1985 35 p (AD-A163059; DTNSRDC/CMLD-85/05) Avail: NTIS HC A03/MF A01 CSCL 05I

A Scientific/Engineering Workstation Experiment is being conducted to determine the characteristics of workstations which would significantly improve the productivity of scientists and engineers in the Naval Laboratories. This report discusses the evaluation methodology and results. Furthermore, the report presents preliminary comments and recommendations for scientific/engineering workstation specifications. The initial results of the experiment are based on the time interval from April to August, 1984. Four major preliminary conclusions were reached. First, workstations can be effectively used for real projects. Second, the individual scientists or engineer's working environment plays an important role in the utilization of a workstation. Third, certain features and capabilities were found to be used by scientists and engineers on certain features and capabilities were found to be used by scientists and engineers on almost all workstations. Finally, workstation specifications should be primarily based on performance requirements that insure the actual needs of scientists and engineers are met. GRA

THE CHOICE OF SEAT BACK ANGLE TO IMPROVE ACCELERATION TOLERANCE
J. M. CLERE, H. VIEILLEFOND, and J. L. POIRIER Oct. 1985 51 p
(Contract DRET-82-1131)
(CEV-70-209; ESA-86-97195) Avail: NTIS HC A04/MF A01

The optimization of pilot seat back angle at accelerations of 7.8 to 9 g was studied using centrifugal simulation facilities. The physiological parameters such as heart rate, blood pressure, and visual field were measured at seat back angles from 30 to 60 deg. It is shown that the seat back angle of 60 deg eliminates visual problems at 9 g and protects against blood circulation problems. Angles of 30 deg produce clear intolerance symptoms. ESA

Physiological and cytogenetic changes in the Welsh onion plants induced by a short (82 days) and long term (522 days) space flight are expressed in decrease of seed germination, inhibition of stem growth, depression of cell division in root meristem, and increase in the number of structural chromosome rearrangements. The treatment of such plants with solutions of a-tocopherol, auxin, and kinetin decreased the level of chromosome aberrations to the control one and normalized cell divisions and growth partly or completely. SEARCH FOR CHIRAL MOLECULES AND OPTICAL ACTIVITY IN EXTRATERRESTRIAL SYSTEMS. THE CASSINI MISSION OPPORTUNITY

A. BRACK and G. SPACH (Rouen Univ. France) *In* ESA The Atmospheres of Saturn and Titan p 189-191 Dec. 1985

Avail: NTIS HC A14/MF A01

The genesis of homochiral systems and the conditions which dictate the choice of a given set of enantiomers rather than the antipode are discussed. Examination of extraterrestrial organic molecules may give clues if life based on carbon chemistry is sought. Where life is expected to exist (Mars), the detection of optical activity may be a good indication of its presence. The situation is different on Titan which is still in its phase of chemical evolution. The most simple possible derivatives devoid of oxygen atoms are listed. Search for optical activity on Titan raises difficult technical problems which, once solved, may be helpful for further exploration of other planets. ESA

A THEORETICAL CONCEPT FOR STATE CHANGES AND SHAPE CHANGES IN WEIGHTLESSNESS

R. J. STRASSER *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVLR-Mitt-85-16) p 23-31 Oct. 1985 In GERMAN; ENGLISH summary

Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

A theoretical concept for state and shape changes in weightlessness based on thermodynamics principles for open systems is developed. The influence of light, temperature, pressure, and gravity on the shape and state of a biological system, and therefore on the phenotype with steady genome are studied. Experiments are carried out on leaves, chloroplasts, neurospores and mammalian cell spheroids. An experimental module for cellular biology was built for automatic optical and electrode measurements. The data are recorded, stored, and processed at a ground station. Experiments in space stations are recommended to study the influence of gravity and geomagnetism on the shape and the biochemical processes of a biological system and to obtain data on the phylogenesis of more complicated organisms. ESA

SOME REMARKS ON GRAVITATIONAL BIOLOGY

W. BRIEGLEB *In its* Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVLR-Mitt-85-16) p 33-44 Oct. 1985 In GERMAN; ENGLISH summary

Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

A functional system including direct/primary, indirect/secondary and various indirect/tertiary interactions between an organism and gravity was developed to study the genetic and phylogenic consequences of gravity on animals living in water or on land. Gravity influences the gravity receptors leading to humoral or neuronal responses according to cell or proprioreceptor excitation. The immersed condition with no indirect gravity influence is compared with real weightlessness to analyze gravity direct influence on an isolated cell function or on a bunch of cells in egg ontogenesis and to analyze the effects of gravity on statocyst differentiation. In animals living on land, the antigravity structures and functions are influenced by gravity. The mutational effects of gravity leading to gene evolution through neuronal and functional morphological responses are presented. Hypergravity and weightlessness should be further studied. ESA

N86-29518# Konstanz Univ. (West Germany). Biologische Fakultaet.

INVESTIGATIONS OF PARAMECIUM CELLS ANALYZED UNDER MICROGRAVITY CONDITIONS

H. PLATTNER *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVLR-Mitt-85-16) p 47-52 Oct. 1985 In GERMAN; ENGLISH summary

Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Paramecium tetraurelia cells were studied using light microscopy, video recording, amino-ethyl dextran as redocking trigger agent and electronic microscopy to analyze exocytosis movements, redocking cycles on the cellular membrane and trichocyst building-up for 12 hr. The relationship between trichocyst ejection and motion behavior under microgravity conditions is studied using behavior mutants and secretion mutants to assess the negative or positive selection pressure of trichocyst presence or absence. ESA

THE ORIGIN OF THE SPICULE SKELETON OF FRESH WATER SPONGES (SPONGILLIDES)
N. WEISSENFELS *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 53-56 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Young fresh water sponges cultivated in laboratory in constant temperate water and in ambient temperature were used to study the origin of the sponge spicule skeleton. The SiO2 spicules are formed in scleroblasts. Aged spicules leave the scleroblasts and are transported by transport cells to their functional location where they adhere to the base plate through spongin which ensures their stability. The life cycle of the spongillides throughout the seasons is described. The influence of gravity on the development of young sponges should be studied. ESA

N86-29520# Cologne Univ. (West Germany). Zoologisches Inst.
LIMB REGENERATION IN AMPHIBIANS, A SUITABLE MODEL FOR INVESTIGATIONS OF THE EFFECTS OF WEIGHTLESSNESS AS REGARDS EVOLUTION AND MODIFICATIONS
H. J. ANTON *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 63-68 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Limb regeneration in urodeles, amphibians which have experienced a phylogenetic evolution to overcome the effects of gravity, was studied to analyze the long term effects of weightlessness depending on environmental conditions and on gene activation. The study gives data on evolution processes and phylogenesis under weightlessness, on calcium exchange, and physiological regeneration of the skeleton as supporting and moving apparatus. ESA

N86-29521# Ruhr Univ., Bochum (West Germany). Fakultaet fuer Biologie.
INVESTIGATIONS OF THE REPRODUCTIVE PHYSIOLOGY OF THE RAINBOW TROUT (SALMO GAIRDNERI RICHARDSON)
V. BLUEM and R. SCHULZ *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 69-73 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Morphological and endocrinal investigations on the reproductive physiology of the rainbow trout of either sex were performed to study hypothalamic production of gonadotropin releasing hormone (GnRH) using histological and histometrical analysis, to demonstrate the presence of gonadotrop hormone receptors (GTH-receptors) in testes and ovaries based on radioimmunological quantification and using the immunofluorescent technique. An in vitro system for gonad tissues was developed to study steroid genesis in short-time cultures. The effects of puberty in rainbow trout on material exchange are studied. Ethiological studies were carried out to determine the influence of sexual and/or parental phases. The morphological control of gametogenesis in micro-g environment is recommended as well as in vivo and in vitro investigations of reproduction-dependent hormonal systems. ESA

N86-29522# Essen Univ. (West Germany). Abt. fuer Zoophysiologie.
CHANGES IN THE MORPHOLOGICAL AND MOLECULAR BIOLOGICAL PROCESSES DURING EARLY EMBRYO DEVELOPMENT IN AMPHIBIANS UNDER MICRO G CONDITIONS
H. GRUNZ *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 75-80 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The effects of micro-g conditions on vegetative polarity (absence of change) in aging oocytes over 2 months were studied to determine the role of gene regulatory factors and the changes in nucleus-cytoplasm interactions. Cell affinity and induction should be investigated under micro-g conditions to study the processes of reaggregation between ectoderm and endoderm and the changes in the standard structure so as to understand normal and pathological embryo development. ESA

N86-29523# Giessen Univ. (West Germany). Genetischen Inst.
XIPHOPHORUS: A SYSTEM TO RECOGNIZE RADIATION-INDUCED MUTATIONS AND TO STUDY THE EFFECTS OF ZERO-GRAVITY ENVIRONMENT ON EMBRYO DEVELOPMENT
C. R. SCHMIDT and F. ANDERS *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 81-85 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The reproduction physiology of Xiphophorus is described. Laboratory mutants constitute a system of 60 stable and genetically determined species. Resulting from their crossbreeding melanomas appear due to a disorded oncogene. The Xiphophorus system is studied to determine the oncogene characteristics, regulation and transmission. Studies on Xiphophorus under weightlessness are recommended: influence of 0-g environment on skeleton and skeletonmuscle structure; epigenetic and/or genetic effects of 0-g environment on embryogenesis in vivo and in vitro; and the effects of the combined action of cosmic radiation and weightlessness on embryos, sub-adult and adult animals of the mutation-sensitive Xiphophurus test species to investigate mutagenesis and teratogenesis. ESA

HYPOXIC HYPOXIA AS A STIMULUS OF ERYTHROPOIESIS IN VIVO AND IN VITRO
W. JELKMANN *In* DFVLR Proceedings and program draft in Gravitational Biology in the Federal Republic of Germany p 95-100 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The action of weightlessness on red blood volume in astronaut's anemia and on erythropoiesis leading to increased hemolysis is studied. Several generations of mice and rats bred in weightlessness were studied to determine the effects of weightlessness on the erythropoetic tissues, on erythropoiesis and on calcification. Causes of astronaut's anemia are listed. The effects of weightlessness on the erythropoietic system ontogenesis were measured based on circulative blood and erythrocyte volumes, the functional integrity of the hematopoietic tissue and the capacity of the erythropoietic system to react to hypoxia. ESA

N86-29525# Marburg Univ. (West Germany). Arbeitsgruppe Verhaltensphysiologie.
A LEARNING MODEL AS A BASIS FOR INVESTIGATIONS OF THE EFFECTS OF GRAVITY ON THE LEARNING PROCESSES AND MEMORY FORMULATION
C. BUCHHOLTZ *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 107-113 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The effects of gravity on learning strategy were studied using conditioned mice and a data acquisition computer system recording the daily performance of each mouse. The records are used to develop learning models. Increased gravity causes changes in the functional relationship between data storage units. These changes depend on the calculation result of proprioceptive feedbacks, and on time dependent effects represented by transmission of data from a short term memory related to the biophysical phase to long term memory related to the biochemical phase. ESA

N86-29526# Duesseldorf Univ. (West Germany). Inst. fuer Physikalische Biologie.
LONG-TERM ADAPTATION OF THE OTOLITH ORGANS
R. ECKMILLER *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 115-120 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Reduction in sensitivity of otolith organs in primates before a space mission and methods to reduce it were investigated to avoid space motion sickness. A procedure should be developed under neurophysiological control of the otolith afferences to influence the size and location of otoconia. ESA

N86-29527# Ulm Univ. (West Germany). Abt. Neurologie.
FUNCTIONAL DEVELOPMENT OF GRAVITY RECEPTORS IN INSECTS AND AMPHIBIANS
E. HORN *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 121-128 Oct. 1985 In GERMAN; ENGLISH summary Sponsored by Deutsche Forschungsgeimschaft
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Insects using a proprioceptive system and amphibians using a statocyst system were studied to analyze the functional development of a sensory system and its influence of the body muscle structure. The effects of micro-g through gravity receptors on the efficiency of the sensory system, on the adaptative mechanisms of the neuronal development under changing living conditions or under the animal pathological conditions, and on the hormonal environment are studied. The studies are based on eye reflex (Xenopus) and head reflex (Gryllus) and on equilibrium observations. ESA

N86-29528# Stuttgart Univ. (West Germany). Inst. fuer Zoologie.
FUNCTION-DEPENDENT PLASTICITY IN THE NERVOUS SYSTEM
H. RAHMANN and W. PROBST *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 135-139 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The tectum opticum of fish midbrain is studied to demonstrate the involvement of gangliosides in the functional plastic changes in synaptic systems and in visual acuity. The structural synaptic plasticity after light variations involving synaptic vesicles and after temperature variations involving the nervous system are studied using differential quantitative light and electronic microscopes. The biochemical neuronal plasticity after temperature variations involves sialo-glycoconjugate bonds and gangliosides. The molecule basic properties are determined using the monolayer technique for physico-chemical in vitro experiments with various neuronal membrane lipids combined with calcium ions. Further investigations are recommended to study neuronal plasticity in reduced or in absence of gravity. ESA

N86-29529# Bonn Univ. (West Germany). Zoologisches Inst.
MORPHOLOGY AND DEVELOPMENT OF THE INNER EAR OF ANURANS
H. SCHNEIDER and I. HERTWIG *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 141-146 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The Anuran inner ear consists of five sensory sections for orientation in space and perception of acoustic signals. Utriculus, sacculus and lagena are gravity receptors possessing otoliths. The ampullae of the semicircular canals are responsible for rotation sense. Papillia basilaris and papilla amphiborum allow respectively perception of high frequencies and low frequencies. The development of the labyrinth in amphibians begins after neurulation. The receptors consist of sensory cells and support cells. Experiments in simulated weightlessness show that the development of sensory epithelia and otoliths do not depend on gravity and should be confirmed by experiments in space. ESA

N86-29530# Bielefeld Univ. (West Germany). Abt. Neuroanatomie.
QUESTIONS ON THE EVOLUTION OF THE DEVELOPMENTAL PROGRAM OF THE VERTEBRATE INNER EAR UNDER LONG TERM ZERO G CONDITIONS
B. FRITZSCH *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 151-156 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

The long-term effects of weightlessness on the formation and function of the vestibular system are studied with particular focus on the persistence of motion defects of larva up to adult age, on the reproduction function, on the adaptation or selection of the offspring and hybrids resulting from successful reproduction under weightlessness, and on the sensory epithelium differentiation. The structural changes of the inner ear in adapted or selected offspring are studied using electronic microscope and the afferent and efferent connections using tracer methods. High generation succession frequency and offspring number, applicable reproductive behavior and easy culture, and live food are the minimum requirements for program implementation. ESA

N86-29531# Kiel Univ. (West Germany). Inst. fuer Meereskunde.
LONG DURATION CONFINEMENT OF AQUATIC ORGANISMS IN WEIGHTLESSNESS (AQUASPACE)
R. FROESE *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 159-164 Oct. 1985 In GERMAN; ENGLISH summary
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

A confinement facility resulting from the study of the transition phase between water and air was developed to study aquatic organisms in weightlessness. The facility is a closed system filled with water and consists of a central supply unit, confinement tanks, a lock system, a computer system for food supply control and measurement processing, videocameras monitoring growth, reproduction and behavior of the aquatic organisms, and two chambers to remove the gases released in water through a diffusion membrane and store oxygen in a gas mixture. The facility can be used to study the catabolism of the aquatic organisms in weightlessness and the effects of weightlessness and radiation on the reproduction biology. ESA

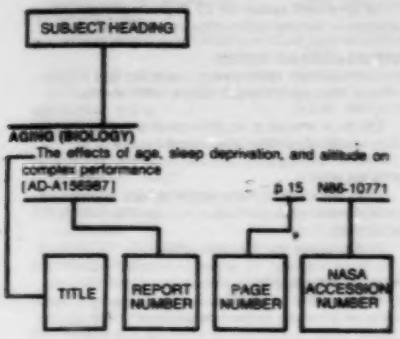
PROGRAM DRAFT FOR A SPECIAL FIELD: GRAVITATIONAL BIOLOGY
E. HORN *In* DFVLR Proceedings and Program Draft in Gravitational Biology in the Federal Republic of Germany (DFVL R-Mitt-85-16) p 173-189 Oct. 1985 In GERMAN
Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 50

Gravitational biology as a special field for fundamental research on organism biology in weightlessness is discussed. Cellular and molecular biology, genetics; reproduction and development biology; vegetative biology and matter exchange biology; neurobiology; behavioral and motion physiology; population genetics, and evolution biology, and ecology and life preservation systems are suitable fields of research. The cooperation between the different field specialists and experts can contribute to the knowledge of body stabilization and plasticity and adaptativity in weightlessness. ESA

N86-29533# Southwest Research Inst., San Antonio, Tex.
EFFECTS OF 60 HZ ELECTRIC FIELDS ON OPERANT AND SOCIAL STRESS BEHAVIOR OF NONHUMAN PRIMATES Quarterly Technical Progress Report, 26 Sep. - 20 Dec. 1985
W. R. ROGERS 3 Jan. 1986 5 p
(Contract DE-AC02-80RA-50219)
(DE86-005067; DOE/RA-50219/T7; QTPR-20) Avail: NTIS HC A02/MF A01

This research program will evaluate the aversive character of exposure to 60 Hz electric fields by determining the threshold intensity which produces avoidance or escape responses, will estimate the threshold intensity for detection of 60 Hz electric fields, will assess effects of chronic exposure to 60 Hz electric fields on the performance of two operant conditioning tasks, fixed ratio and differential reinforcement of low rate responding, will investigate, using the systematic quantitative observational sampling methods of primatology, the possible stress-inducing effects of chronic exposure to 60 Hz electric fields on the behavior of baboons living in small social groups. In all experiments, the electric fields will be described, characterized, and controlled to account for recognized artifacts associated with high intensity 60 Hz electric fields and the health of all subjects will be described using the methods of primate veterinary medicine. DOE

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442
AMPHIBIA
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
ANAEROBES
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
ANATOMY
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
ANEMIAS
Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N86-29524
ANGLES (GEOMETRY)
The choice of seat back angle to improve acceleration tolerance
[CEV-70-209] p 386 N86-29512
ANIMALS
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-28606
ANNIHILATION REACTIONS
On the biological hazard of galactic antinuclei
p 378 A86-43437
ANTHROPOMETRY
Anthropometry research program
[FOA-C-50032-H2] p 386 N86-29511
ANTIGENS
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins
p 371 A86-40675
ANTINUCLEONS
On the biological hazard of galactic antinuclei
p 378 A86-43437
ANTISEPTICS
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-28622
APTITUDE
Components of spatial ability
[AD-A165694] p 382 N86-28616
ARRHYTHMIA
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
ARTEMIA
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787
ARTERIOSCLEROSIS
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
ARTIFICIAL INTELLIGENCE
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
Space teleoperation research. American Nuclear Society Executive conference: Remote operations and robotics in the nuclear industry; remote maintenance in other hostile environments
[NASA-TM-89234] p 386 N86-29513
ASCENT
Physiological problems of ascent to altitude
p 376 A86-40566
ATROPHY
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442
ATROPINE
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177085] p 380 N86-29497
ATTITUDE (INCLINATION)
Long-term adaptation of the otolith organs
p 389 N86-29526
AUDITORY PERCEPTION
Long-term adaptation of the otolith organs
p 389 N86-29526
Morphology and development of the inner ear of Anurans p 389 N86-29529
AUTOMATIC CONTROL
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
AUTONOMIC NERVOUS SYSTEM
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177085] p 380 N86-29497
AVOIDANCE
Effects of 60 Hz electric fields on operant and social stress behavior of nonhuman primates
[DE86-005067] p 390 N86-29533
AXES OF ROTATION
Shoulder and hip joint for hard space suits
[NASA-CASE-ARC-11543-1] p 384 N86-28620

B

B-1 AIRCRAFT
Air Force uses computer lessons to train instructors, flight crews p 382 A86-41799
BABOONS
Effects of 60 Hz electric fields on operant and social stress behavior of nonhuman primates
[DE86-005067] p 390 N86-29533
BACTERIA
Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A86-40879
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin
p 374 A86-43434
Halobacterium denitrificans sp. nov., an extremely halophilic denitrifying bacterium p 374 A86-43438
BACTERIOLOGY
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
BALANCE
Functional development of gravity receptors in insects and amphibians p 389 N86-29527

BED REST
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177086] p 380 N86-29497
BEHAVIOR
Effects of 60 Hz electric fields on operant and social stress behavior of nonhuman primates
[DE86-005067] p 390 N86-29533
BIBLIOGRAPHIES
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 286)
[NASA-SP-7011(286)] p 379 N86-28612
BINOCULAR VISION
The importance of stereoscopic imagery in flight simulation p 383 A86-40483
The human dual visual systems - Their importance in simulation p 381 A86-40485
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
BIOCHEMISTRY
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40669
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 375 A86-43453
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A86-43454
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N86-29498
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N86-29525
BIOCONTROL SYSTEMS
Phases of muscular thermogenesis under experimental hyperthyroxis p 373 A86-43425
BIOELECTRIC POTENTIAL
Spinal cord decompression sickness - A comparison of recompression therapies in an animal model p 372 A86-41784
BIOELECTRICITY
Intraventricular conduction disturbances in flying personnel Right bundle branch block p 378 A86-41788
BIOINSTRUMENTATION
Enzyme cofactor modified electrodes
[AD-A165604] p 375 N86-28607
BIOLOGICAL EFFECTS
The new ANSI RF radiation exposure standard - Its background and impact p 371 A86-40519
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays p 373 A86-41787
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514

[JPRS-UBB-86-009] p 376 N86-28610
Applied biology and biotechnology, the program of the Federal government, 1985-1988
[ESA-86-96938] p 386 N86-28626
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-39BR] p 376 N86-29494
BLOOD CIRCULATION
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia p 379 N86-28611
BLOOD FLOW
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
BODY FLUIDS
Water and electrolytes — in human bodies p 376 A86-40660
BONE DEMINERALIZATION
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A86-43454
Skeletal response to short-term weightlessness
[NASA-TM-88778] p 379 N86-29496
BONE MINERAL CONTENT
Effects of N,N,N',N'-Ethylenediaminetetramethylene phosphonic acid and 1-Hydroxyethylidene-1,1-bisphosphonic acid on calcium absorption, plasma calcium, longitudinal bone growth, and bone histology in the growing rat p 374 A86-43444
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 375 A86-43453
BONES
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
BRAIN CIRCULATION
Postradiation regional cerebral blood flow in primates p 373 A86-41786
Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness p 373 A86-43422
BREATHING APPARATUS
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29499

C

CALCIFEROL
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
CALCIUM METABOLISM
Effects of N,N,N',N'-Ethylenediaminetetramethylene phosphonic acid and 1-Hydroxyethylidene-1,1-bisphosphonic acid on calcium absorption, plasma calcium, longitudinal bone growth, and bone histology in the growing rat p 374 A86-43444
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A86-43454
CALIBRATING
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-28617
CARBON
Enzyme cofactor modified electrodes
[AD-A165604] p 375 N86-28607
CARBON ISOTOPES
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40669
CARBONIC ANHYDRASE
Role of carbonic anhydrase in bone - Partial inhibition of disuse atrophy of bone by parenteral acetazolamide p 374 A86-43448
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 375 A86-43453
CARDIAC VENTRICLES
Intraventricular conduction disturbances in flying personnel Right bundle branch block p 378 A86-41788
CARDIOLOGY
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography p 377 A86-41400
CARDIOVASCULAR SYSTEM
Cardiovascular epidemiology, exercise, and health - 40-year followup of the U.S. Navy's '1000 aviators' p 378 A86-41789
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
CATABOLISM
Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531
CATALYSIS
RNA catalysis and the origin of life p 372 A86-41043
CATHODE RAY TUBES
The detection of various color combinations under different chromatic ambient illuminations p 378 A86-41783
CATS
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia p 379 N86-28611
CELLS (BIOLOGY)
Enhancing effects of gamma interferon on phagocytic cell association with and killing of Trypanosoma cruzi p 371 A86-40666
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-39BR] p 376 N86-29494
Investigations of Paramecium cells analyzed under microgravity conditions p 387 N86-29518
CELLULOSE NITRATE
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
CENTRAL NERVOUS SYSTEM
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
CEREBRAL CORTEX
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
CHEMICAL WARFARE
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
CHEMOTHERAPY
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-28614
CHIRAL DYNAMICS
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A86-41046
Search for chiral molecules and optical activity in extraterrestrial systems. The Cassini mission opportunity p 387 N86-28671
CHROMOSOMES
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
CIRCADIAN RHYTHMS
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A86-40684
A benzodiazepine used in the treatment of insomnia phase-shifts - The mammalian circadian clock p 372 A86-40675
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-88231] p 379 N86-28613
CIRCULAR CYLINDERS
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005760] p 385 N86-28623
CLIMBING FLIGHT
Physiological problems of ascent to altitude p 376 A86-40568
CLINICAL MEDICINE
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
Monkeys as a source of viral diseases in man
[NASA-TM-78017] p 386 N86-28625

COCKPITS
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
COLD ACCLIMATIZATION
Development of responses to noradrenalin injection in control and cold-adapted rats p 373 A86-43424
COLOR VISION
Importance of color displays in visual flight simulation p 381 A86-40484
The detection of various color combinations under different chromatic ambient illuminations p 378 A86-41783
COMMUNICATION
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N86-29505
COMPUTER ASSISTED INSTRUCTION
Air Force uses computer lessons to train instructors, flight crews p 382 A86-41799
COMPUTER GRAPHICS
A discrete control model of operator function - A methodology for information display design p 384 A86-41381
COMPUTER PROGRAMS
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB86-145471] p 379 N86-28615
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005760] p 385 N86-28623
COMPUTER TECHNIQUES
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
COMPUTERIZED SIMULATION
Human performance simulation - Combining the data p 381 A86-40480
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005760] p 385 N86-28623
COMPUTERS
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
CONFERENCES
Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 p 381 A86-40476
Space teleoperation research. American Nuclear Society Executive conference: Remote operations and robotics in the nuclear industry; remote maintenance in other hostile environments
[NASA-TM-89234] p 386 N86-29513
CONFIDENCE LIMITS
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-28617
CONFINEMENT
Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531
CONTAMINATION
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-28622
CONTROL THEORY
A discrete control model of operator function - A methodology for information display design p 384 A86-41381
CONTROLLERS
Reverse osmosis water purification system p 384 N86-28291
COOLING SYSTEMS
Reverse osmosis water purification system p 384 N86-28291
CORONARY ARTERY DISEASE
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
COSMIC RAYS
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523
COSMOS SATELLITES
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-28606
COUPLING COEFFICIENTS
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
CREW PROCEDURES (INFLIGHT)
Relationships among aircrew performance measures for evaluating flight simulator training effectiveness p 381 A86-40479
CULTURE TECHNIQUES
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-30BR] p 376 N86-29494
CYBERNETICS
A discrete control model of operator function - A methodology for information display design p 384 A86-41381
CYTOGENESIS
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-28624
CYTOLOGY
Microtubule configurations during fertilization, mitosis, and early development in the mouse and the requirement for egg microtubule-mediated motility during mammalian fertilization p 371 A86-40674
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins p 371 A86-40675
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
CYTOPLASM
Microtubule configurations during fertilization, mitosis, and early development in the mouse and the requirement for egg microtubule-mediated motility during mammalian fertilization p 371 A86-40674

D

DARK ADAPTATION
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin p 374 A86-43434
DATA ACQUISITION
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N86-29525
DATA PROCESSING
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
DECOMPRESSION SICKNESS
Spinal cord decompression sickness - A comparison of recompression therapies in an animal model p 372 A86-41784
A blitz of bends - Decompression sickness in four students after hypobaric chamber training p 378 A86-41790
DECONDITIONING
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177085] p 380 N86-29497
DECONTAMINATION
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
DEHYDRATED FOOD
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-28622
DEHYDRATION
Water and electrolytes — in human bodies p 376 A86-40660
DENITROGENATION
Halobacterium denitrificans sp. nov., an extremely halophilic denitrifying bacterium p 374 A86-43438
DEOXYRIBONUCLEIC ACID
Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A86-40879
DESALINIZATION
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
DESIGN ANALYSIS
The WPI space glove design project p 383 A86-40522
DIFFERENTIATION (BIOLOGY)
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530
DIFFUSION ELECTRODES
Enzyme cofactor modified electrodes
[AD-A165604] p 375 N86-28607
DISPLACEMENT
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
DISPLAY DEVICES
Importance of color displays in visual flight simulation p 381 A86-40484
Visual display requirements for boom operator training in aerial refueling p 383 A86-40488
A discrete control model of operator function - A methodology for information display design p 384 A86-41381
DIVING (UNDERWATER)
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29499
DOSAGE
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
DRUGS
A benzodiazepine used in the treatment of insomnia phase-shifts - The mammalian circadian clock p 372 A86-40875
DYNAMIC MODELS
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N86-29504

E

EAR
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530
EARTH ORBITAL ENVIRONMENTS
On the biological hazard of galactic antinuclei p 378 A86-43437
ECOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-009] p 376 N86-28610
EDUCATION
The WPI space glove design project p 383 A86-40522
ELBOW (ANATOMY)
Elbow and knee joint for hard space suits
[NASA-CASE-ARC-11610-1] p 384 N86-28619
ELECTRIC FIELDS
Effects of 60 Hz electric fields on operant and social stress behavior of nonhuman primates
[DE86-005067] p 390 N86-29533
ELECTRIC POTENTIAL
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
ELECTROCARDIOGRAPHY
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography p 377 A86-41400
ELECTROCHEMISTRY
Enzyme cofactor modified electrodes
[AD-A165604] p 375 N86-28607
ELECTROLYTE METABOLISM
Water and electrolytes — in human bodies p 376 A86-40660
ELECTROMYOGRAPHY
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N86-29498
EMBRYOLOGY
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins p 371 A86-40675
EMBRYOS
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523
EMOTIONAL FACTORS
Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ)
[FOA-C-50034-H3] p 383 N86-29506
ENDOCRINOLOGY
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson) p 388 N86-29521
ENZYME ACTIVITY
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449

ENZYMES
Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A86-40879
Enzyme cofactor modified electrodes
[AD-A165804] p 375 N86-29607
EPIDEMIOLOGY
Cardiovascular epidemiology, exercise, and health - 40-year followup of the U.S. Navy's '1000 aviators'
p 378 A86-41789
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-009] p 376 N86-29610
ERRORS
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503
ERYTHROCYTES
Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N86-29524
EUROPEAN SPACE PROGRAMS
The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB86-145471] p 379 N86-28615
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503
EVOLUTION (DEVELOPMENT)
The origin of the spicule skeleton of fresh water sponges (Spongillidae) p 388 N86-29519
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520
EXERCISE PHYSIOLOGY
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
Cardiovascular epidemiology, exercise, and health - 40-year followup of the U.S. Navy's '1000 aviators'
p 378 A86-41789
EXOBIOLOGY
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 286)
[NASA-SP-7011(286)] p 379 N86-28612
Exobiological aspects in view of Titan — Cassini Saturn mission p 387 N86-28868
EXTRATERRESTRIAL LIFE
Search for chiral molecules and optical activity in extraterrestrial systems. The Cassini mission opportunity
p 387 N86-28871
EXTRAVEHICULAR ACTIVITY
EVA suit glove design p 383 A86-40521
Advanced EVA operation on-orbit tasks and services
[AIAA PAPER 86-1175] p 384 A86-40585

F

FATIGUE (BIOLOGY)
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-88231] p 379 N86-28613
FEMALES
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
FERTILIZATION
Microtubule configurations during fertilization, mitosis, and early development in the mouse and the requirement for egg microtubule-mediated motility during mammalian fertilization p 371 A86-40674
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins
p 371 A86-40675
FINANCE
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-39BR] p 376 N86-29494
FISHES
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson)
p 388 N86-29521
Function-dependent plasticity in the nervous system
p 389 N86-29528
FLIGHT CREWS
Relationships among aircrew performance measures for evaluating flight simulator training effectiveness
p 381 A86-40479
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A86-40684
Air Force uses computer lessons to train instructors, flight crews p 382 A86-41799
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-88231] p 379 N86-28613
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N86-29505
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
FLIGHT FATIGUE
Quantification of pilot fatigue - A new approach to a crucial problem p 376 A86-40231
FLIGHT FITNESS
Intraventricular conduction disturbances in flying personnel Right bundle branch block
p 376 A86-41788
FLIGHT HAZARDS
Physiological problems of ascent to altitude
p 376 A86-40566
FLIGHT SAFETY
Quantification of pilot fatigue - A new approach to a crucial problem p 376 A86-40231
FLIGHT SIMULATION
Relationships among aircrew performance measures for evaluating flight simulator training effectiveness
p 381 A86-40479
Resolution and scene detail performance of the visual system in flight simulation p 381 A86-40482
The importance of stereoscopic imagery in flight simulation p 383 A86-40483
Importance of color displays in visual flight simulation
p 381 A86-40484
FLIGHT SIMULATORS
Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 p 381 A86-40476
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
FLIGHT STRESS (BIOLOGY)
Quantification of pilot fatigue - A new approach to a crucial problem p 376 A86-40231
FLIGHT TRAINING
Visual display requirements for boom operator training in aerial refueling p 383 A86-40486
A blitz of bends - Decompression sickness in four students after hypobaric chamber training
p 378 A86-41790
FLOW DISTRIBUTION
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005760] p 385 N86-28623
FLOW MEASUREMENT
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
FLUID FILTERS
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
FLUID FLOW
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005760] p 385 N86-28623
FRACTIONATION
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40669

G

GALACTIC COSMIC RAYS
On the biological hazard of galactic antinuclei
p 378 A86-43437
GAS MIXTURES
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29499
GAS TRANSPORT
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia
p 379 N86-28611
GASTROINTESTINAL SYSTEM
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
GENETIC CODE
Conservation of the secondary structure of protein during evolution and the role of the genetic code
p 372 A86-41047
GENETIC ENGINEERING
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-009] p 376 N86-28610
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-39BR] p 376 N86-29494
GENETICS
A theoretical concept for state changes and shape changes in weightlessness p 387 N86-29516
GERMINATION
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-28624
GLOVES
EVA suit glove design p 383 A86-40521
The WPI space glove design project
p 383 A86-40522
GLUCOSE
Enzyme cofactor modified electrodes
[AD-A165804] p 375 N86-28607
GRAVIRECEPTORS
Morphology and development of the inner ear of Amurans p 389 N86-29529
GRAVITATIONAL EFFECTS
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-28606
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176845] p 380 N86-29498
Proceedings and program draft in Gravitational Biology in the Federal Republic of Germany
[DFVLR-MITT-85-16] p 387 N86-29514
A theoretical concept for state changes and shape changes in weightlessness p 387 N86-29516
Some remarks on gravitational biology
p 387 N86-29517
The origin of the spicule skeleton of fresh water sponges (Spongillidae) p 388 N86-29519
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson)
p 388 N86-29521
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N86-29525
Morphology and development of the inner ear of Anurans p 389 N86-29529
GROWTH
The effects of prostaglandin E2 in growing rats - increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
GUANIDINES
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608

H

HABITUATION (LEARNING)
The effect of antimotion sickness drugs on habituation to motion p 377 A86-41780
HEALTH PHYSICS
Cardiovascular epidemiology, exercise, and health - 40-year followup of the U.S. Navy's '1000 aviators'
p 378 A86-41789
HEART FUNCTION
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779
HEART RATE
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177085] p 380 N86-29497
HEMATOLOGY
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-28614
HEMATOPOIESIS
Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N86-29524
HEMODYNAMIC RESPONSES
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779
Hemodynamic correlates of immobilization stress in rats p 373 A86-43423
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
HETEROTROPHS
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40669
HIGH ACCELERATION
The choice of seat back angle to improve acceleration tolerance
[CEV-70-209] p 386 N86-29512

HISTOLOGY
Skeletal response to short-term weightlessness
[NASA-TM-88778] p 379 N88-29498
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N88-29498
HUMAN BEHAVIOR
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N88-29505
Effects of consuming various foods and nutrients on objective and subjective aspects of human performance and behavior
[NASA-CR-177003] p 385 N88-29509
HUMAN BEINGS
Information processing in mammalian visual cortex
[AD-A165832] p 376 N88-28609
Monkeys as a source of viral diseases in man
[NASA-TM-78017] p 388 N88-28625
HUMAN BODY
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE88-005760] p 385 N83-28623
HUMAN FACTORS ENGINEERING
Torso sizing ring construction for hard space suit
[NASA-CASE-ARC-11616-1] p 384 N88-28618
Shoulder and hip joint for hard space suits
[NASA-CASE-ARC-11543-1] p 384 N88-28620
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N88-29505
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N88-29508
HUMAN PERFORMANCE
Human performance simulation - Combining the data
p 381 A88-40480
The human dual visual systems - Their importance in simulation
p 381 A88-40485
Inexpert calibration of comprehension
[AD-A165701] p 382 N88-28617
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N88-29504
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N88-29505
HUMAN REACTIONS
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB88-145471] p 379 N88-28615
HYDROCHLORIDES
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N88-28608
HYDROGEN
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N88-29499
HYDROGEN CHLORIDES
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N88-28608
HYPOBARIC ATMOSPHERES
A blitz of bends - Decompression sickness in four students after hypobaric chamber training
p 378 A88-41790
HYPODYNAMIA
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A88-43442
HYPOKINESIA
Hemodynamic correlates of immobilization stress in rats p 373 A88-43423
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N88-29498
HYPOXIA
Response of enlarged alveolar vessels to acute hypoxia p 378 A88-41785
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia
p 379 N88-28611
Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N88-29524

I

ILLUMINANCE
The detection of various color combinations under different chromatic ambient illuminations
p 378 A88-41783
IMAGING TECHNIQUES
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (including speeds of screens, films and screen-film systems)
[PB88-164934] p 380 N88-29501
IMMUNOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-88-009] p 376 N88-28610
INFECTIOUS DISEASES
Enhancing effects of gamma interferon on phagocytic cell association with and killing of Trypanosoma cruzi
p 371 A88-40666
Monkeys as a source of viral diseases in man
[NASA-TM-78017] p 388 N88-28625
INHIBITORS
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A88-43454
INSOMNIA
A benzodiazepine used in the treatment of insomnia phase-shifts - The mammalian circadian clock
p 372 A88-40875
INTERFERON
Enhancing effects of gamma interferon on phagocytic cell association with and killing of Trypanosoma cruzi
p 371 A88-40666
INTRAMOLECULAR STRUCTURES
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A88-41046
ION MOTION
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A88-43433
IONIZING RADIATION
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N88-28614
ISOMERS
Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A88-40879

J

JET LAG
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A88-40684
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-88231] p 379 N88-28613
JOINTS (JUNCTIONS)
Elbow and knee joint for hard space suits
[NASA-CASE-ARC-11610-1] p 384 N88-28619
Shoulder and hip joint for hard space suits
[NASA-CASE-ARC-11543-1] p 384 N88-28620
Shoulder and hip joints for hard space suits and the like
[NASA-CASE-ARC-11534-1] p 385 N88-29507

K

KNEE (ANATOMY)
Elbow and knee joint for hard space suits
[NASA-CASE-ARC-11610-1] p 384 N88-28619

L

LEADERSHIP
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N88-29505
LEARNING
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N88-29525
LIFE SCIENCES
RNA catalysis and the origin of life
p 372 A88-41043
The synthesis of primitive 'living' forms - Definitions, goals, strategies and evolution synthesizers
p 372 A88-41045
LIGHT ADAPTATION
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin
p 374 A88-43434
LIMBS (ANATOMY)
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N88-29520
LOCKING
Elbow and knee joint for hard space suits
[NASA-CASE-ARC-11610-1] p 384 N88-28619
LOCOMOTION
Some remarks on gravitational biology
p 387 N88-28617
Investigations of Paramecium cells analyzed under microgravity conditions p 387 N88-28618
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 388 N88-29530
LOWER BODY NEGATIVE PRESSURE
Cardiovascular responses of women to lower body negative pressure p 377 A88-41779

M

MACROPHAGES
Enhancing effects of gamma interferon on phagocytic cell association with and killing of Trypanosoma cruzi
p 371 A88-40666
MAMMALS
A benzodiazepine used in the treatment of insomnia phase-shifts - The mammalian circadian clock
p 372 A88-40875
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-88-009] p 376 N88-28610
MAN MACHINE SYSTEMS
Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 p 381 A88-40478
Visual display requirements for boom operator training in aerial refueling p 383 A88-40486
A discrete control model of operator function - A methodology for information display design
p 384 A88-41381
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N88-29504
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N88-29508
MANNED SPACE FLIGHT
On the biological hazard of galactic antinuclei
p 378 A88-43437
MANUAL CONTROL
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N88-29503
MARINE TECHNOLOGY
The scientific/engineering workstation experiment: Preliminary results, conclusions and recommendations
[AD-A163059] p 386 N88-29510
MASKS
Method for the determination of respiratory work in protective masks
[FOA-C-40213-C2] p 380 N88-29500
MATHEMATICAL MODELS
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A88-40684
MEMBRANES
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin
p 374 A88-43434
Reverse osmosis water purification system
p 384 N88-28291
MEMORY
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N88-29525
MENTAL PERFORMANCE
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N88-29502
METABOLISM
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A88-40669
MICE
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N88-29525
MICROBIOLOGY
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A88-40669
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-88-009] p 376 N88-28610
MICROPROCESSORS
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB88-145471] p 379 N88-28615
MILITARY OPERATIONS
Human performance simulation - Combining the data
p 381 A88-40480
MILITARY TECHNOLOGY
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N88-28614

MITOSIS
Microtubule configurations during fertilization, mitosis, and early development in the mouse and the requirement for egg microtubule-mediated motility during mammalian fertilization p 371 A86-40874
MOLECULAR BIOLOGY
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A86-41046
Conservation of the secondary structure of protein during evolution and the role of the genetic code p 372 A86-41047
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBS-86-009] p 376 N86-28610
Search for chiral molecules and optical activity in extraterrestrial systems. The Cassini mission opportunity p 387 N86-28871
MOLECULAR STRUCTURE
Conservation of the secondary structure of protein during evolution and the role of the genetic code p 372 A86-41047
MONKEYS
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
Monkeys as a source of viral diseases in man
[NASA-TM-78017] p 386 N86-28625
MONOCULAR VISION
The importance of stereoscopic imagery in flight simulation p 383 A86-40483
MORPHOLOGY
Skeletal response to short-term weightlessness
[NASA-TM-86778] p 379 N86-29496
MOTION SICKNESS
What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction p 377 A86-41645
Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness p 373 A86-43422
Long-term adaptation of the otolith organs p 389 N86-29526
MOTION SICKNESS DRUGS
The effect of antimotion sickness drugs on habituation to motion p 377 A86-41780
MUSCLES
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N86-29498
MUSCULAR FUNCTION
Phases of muscular thermogenesis under experimental hyperthyrosis p 373 A86-43425
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia p 379 N86-28611
MUSCULOSKELETAL SYSTEM
The origin of the spicule skeleton of fresh water sponges (Spongillides) p 388 N86-29519
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
MUSIC
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-28617
MUTATIONS
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523

N

NERVOUS SYSTEM
Function-dependent plasticity in the nervous system p 389 N86-29528
NEURONS
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
Function-dependent plasticity in the nervous system p 389 N86-29528
NEUROPHYSIOLOGY
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB86-145471] p 379 N86-28615
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
NITROGEN COMPOUNDS
Halobacterium denitrificans sp. nov., an extremely halophilic denitrifying bacterium p 374 A86-43438
NITROGUANIDINE
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-29606
NORADRENALINE
Development of responses to noradrenalin injection in control and cold-adapted rats p 373 A86-43424
NUCLEAR MEDICINE
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-29614
NUCLEOTIDES
Enzyme cofactor modified electrodes
[AD-A165804] p 375 N86-28607
NUTRITIONAL REQUIREMENTS
Effects of consuming various foods and nutrients on objective and subjective aspects of human performance and behavior
[NASA-CR-177003] p 385 N86-29509

O

ONTOGENY
Some remarks on gravitational biology p 387 N86-29517
OPERATORS (PERSONNEL)
A discrete control model of operator function - A methodology for information display design p 384 A86-41381
OPTICAL ACTIVITY
Search for chiral molecules and optical activity in extraterrestrial systems. The Cassini mission opportunity p 387 N86-28871
OPTICAL TRACKING
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
ORBITAL SERVICING
Advanced EVA operation on-orbit tasks and services
[AIAA PAPER 86-1175] p 384 A86-40585
ORBITAL SPACE STATIONS
Advanced EVA operation on-orbit tasks and services
[AIAA PAPER 86-1175] p 384 A86-40585
OSMOSIS
Investigations of Paramecium cells analyzed under microgravity conditions p 387 N86-29518
OSTEOPOROSIS
Role of carbonic anhydrase in bone - Partial inhibition of disuse atrophy of bone by parenteral acetazolamide p 374 A86-43448
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A86-43454
OTOLITH ORGANS
Long-term adaptation of the otolith organs p 389 N86-29526
Morphology and development of the inner ear of Anurans p 389 N86-29529
OXYGEN BREATHING
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29499
OXYGEN CONSUMPTION
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia p 379 N86-28611
OXYGEN TENSION
Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness p 373 A86-43422

P

PARAMECIA
Investigations of Paramecium cells analyzed under microgravity conditions p 387 N86-29518
PARTICLE MOTION
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
PATHOLOGICAL EFFECTS
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530
PATTERN RECOGNITION
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609
PELVIS
Shoulder and hip joints for hard space suits and the like
[NASA-CASE-ARC-11534-1] p 385 N86-29507
PENETRATION
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005760] p 385 N86-28823
PERFORMANCE PREDICTION
Human performance simulation - Combining the data p 381 A86-40480
Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ)
[FOA-C-50034-H3] p 383 N86-29506
PERIPHERAL VISION
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
PERSONALITY
The personality and physique of undergraduate aviation majors p 382 A86-40571
PETRI NETS
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N86-29504
PHARMACOLOGY
Effect of spironolactone on acute mountain sickness p 377 A86-41781
PHASE SHIFT
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A86-40684
PHOTOCHEMICAL REACTIONS
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin p 374 A86-43434
PHOTOGRAPHIC FILM
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (Including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501
PHOTOSENSITIVITY
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
PHYSICAL FITNESS
The personality and physique of undergraduate aviation majors p 382 A86-40571
PHYSIOCHEMISTRY
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins p 371 A86-40675
PHYSIOLOGICAL EFFECTS
Physiological problems of ascent to altitude p 376 A86-40566
The effect of antimotion sickness drugs on habituation to motion p 377 A86-41780
Effect of spironolactone on acute mountain sickness p 377 A86-41781
Postradiation regional cerebral blood flow in primates p 373 A86-41786
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-28624
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N86-29498
Effects of consuming various foods and nutrients on objective and subjective aspects of human performance and behavior
[NASA-CR-177003] p 385 N86-29509
PHYSIOLOGICAL RESPONSES
Spinal cord decompression sickness - A comparison of recompression therapies in an animal model p 372 A86-41784
Response of enlarged alveolar vessels to acute hypoxia p 378 A86-41785
Development of responses to noradrenalin injection in control and cold-adapted rats p 373 A86-43424
PHYSIOLOGICAL TESTS
Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness p 373 A86-43422
Hemodynamic correlates of immobilization stress in rats p 373 A86-43423
Phases of muscular thermogenesis under experimental hyperthyrosis p 373 A86-43425
PILOT PERFORMANCE
Quantification of pilot fatigue - A new approach to a crucial problem p 376 A86-40231
The importance of stereoscopic imagery in flight simulation p 383 A86-40483
Intraventricular conduction disturbances in flying personnel Right bundle branch block p 378 A86-41788
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503
PILOTS (PERSONNEL)
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N86-29505

PLANTS (BOTANY)
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-29624
PLASTIC PROPERTIES
Function-dependent plasticity in the nervous system
p 389 N86-29528
POTABLE WATER
Evaluation of water sterilizing tablets
[AD-A165808] p 385 N86-28622
POWER SPECTRA
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177065] p 380 N86-29497
PRESSURE CHAMBERS
A blitz of bends - Decompression sickness in four students after hypobaric chamber training
p 378 A86-41780
PRESSURE MEASUREMENT
Method for the determination of respiratory work in protective masks
[FOA-C-40213-C2] p 380 N86-29500
PRIMATES
Effects of 60 Hz electric fields on operant and social stress behavior of nonhuman primates
[DE86-005067] p 390 N86-29533
PRODUCTIVITY
The scientific/engineering workstation experiment: Preliminary results, conclusions and recommendations
[AD-A163059] p 386 N86-29510
PROJECT MANAGEMENT
The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515
Program draft for a special field: Gravitational biology
p 390 N86-29532
PROPHYLAXIS
Effect of spironolactone on acute mountain sickness
p 377 A86-41781
PROPRIOCEPTION
Some remarks on gravitational biology
p 387 N86-29517
PROPRIOCEPTORS
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
PROSTAGLANDINS
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 375 A86-43453
PROTEIN METABOLISM
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442
PROTEIN SYNTHESIS
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A86-41046
Conservation of the secondary structure of protein during evolution and the role of the genetic code
p 372 A86-41047
PROTEINS
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins
p 371 A86-40675
PROTONS
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
PSYCHOLOGICAL TESTS
Components of spatial ability
[AD-A165694] p 382 N86-28616
Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ)
[FOA-C-50034-H3] p 383 N86-29506
PSYCHOMETRICS
Components of spatial ability
[AD-A165694] p 382 N86-28616
PSYCHOMOTOR PERFORMANCE
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
PSYCHOPHYSICS
Information processing in mammalian visual cortex
[AD-A165632] p 376 N86-28609
PSYCHOPHYSIOLOGY
Resolution and scene detail performance of the visual system in flight simulation p 381 A86-40482
PULMONARY CIRCULATION
Response of enlarged alveolar vessels to acute hypoxia p 378 A86-41785
PURIFICATION
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
Evaluation of water sterilizing tablets
[AD-A165808] p 385 N86-28622

R

RADIATION DAMAGE
Postradiation regional cerebral blood flow in primates
p 373 A86-41786
RADIATION DOSAGE
The new ANSI RF radiation exposure standard - Its background and impact p 371 A86-40519
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-28614
RADIATION EFFECTS
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787
RADIATION HAZARDS
The new ANSI RF radiation exposure standard - Its background and impact p 371 A86-40519
On the biological hazard of galactic antinuclei
p 378 A86-43437
RADIATION INJURIES
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-28614
RADIATION SOURCES
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-28614
RADIO FREQUENCIES
The new ANSI RF radiation exposure standard - Its background and impact p 371 A86-40519
RADIOACTIVE CONTAMINANTS
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
RADIOBIOLOGY
Postradiation regional cerebral blood flow in primates
p 373 A86-41786
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-28614
RADIOGRAPHY
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (Including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501
RATS
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
Skeletal response to short-term weightlessness
[NASA-TM-88778] p 379 N86-29496
REACTION TIME
The detection of various color combinations under different chromatic ambient illuminations
p 378 A86-41783
READING
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-28617
REDUCED GRAVITY
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-28606
REGENERATION (PHYSIOLOGY)
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520
REPRODUCTION (BIOLOGY)
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson)
p 388 N86-29521
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531
REQUIREMENTS
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29499
RESEARCH
Anthropometry research program
[FOA-C-50032-H2] p 386 N86-29511
Program draft for a special field: Gravitational biology
p 390 N86-29532
RESEARCH FACILITIES
The scientific/engineering workstation experiment: Preliminary results, conclusions and recommendations
[AD-A163059] p 386 N86-29510
RESEARCH MANAGEMENT
Applied biology and biotechnology, the program of the Federal government, 1985-1988
[ESA-86-06038] p 386 N86-29626
RESOLUTION
Resolution and scene detail performance of the visual system in flight simulation p 381 A86-40482
RESPIRATION
Method for the determination of respiratory work in protective masks
[FOA-C-40213-C2] p 380 N86-29500
RESPIRATORY PHYSIOLOGY
Response of enlarged alveolar vessels to acute hypoxia p 378 A86-41785
RETINAL IMAGES
The human dual visual systems - Their importance in simulation p 381 A86-40485
REVERSE OSMOSIS
Reverse osmosis water purification system
p 384 N86-28291
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-28621
RIBONUCLEIC ACIDS
RNA catalysis and the origin of life
p 372 A86-41043
RING STRUCTURES
Torso sizing ring construction for hard space suit
[NASA-CASE-ARC-11616-1] p 384 N86-28618
ROBOTS
Space teleoperation research. American Nuclear Society Executive conference: Remote operations and robotics in the nuclear industry; remote maintenance in other hostile environments
[NASA-TM-89234] p 386 N86-29513

S

SAFETY MANAGEMENT
Quantification of pilot fatigue - A new approach to a crucial problem p 376 A86-40231
SEATS
The choice of seat back angle to improve acceleration tolerance
[CEV-70-209] p 386 N86-29512
SEEDS
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-29624
SENSE ORGANS
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
SENSORY PERCEPTION
What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction
p 377 A86-41645
SENSORY STIMULATION
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB86-145471] p 379 N86-28615
SEX FACTOR
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779
SHOULDERS
Shoulder and hip joint for hard space suits
[NASA-CASE-ARC-11543-1] p 384 N86-28620
Shoulder and hip joints for hard space suits and the like
[NASA-CASE-ARC-11534-1] p 385 N86-29507
SIGNAL ANALYSIS
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
SIGNS AND SYMPTOMS
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
SIMULATION
Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 p 381 A86-40476
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A86-40684
SIZE (DIMENSIONS)
Torso sizing ring construction for hard space suit
[NASA-CASE-ARC-11616-1] p 384 N86-28618
SLEEP
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-88231] p 379 N86-28613

SPACE ADAPTATION SYNDROME
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
SPACE FLIGHT STRESS
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-29624
SPACE PERCEPTION
Components of spatial ability
[AD-A165694] p 382 N86-29616
SPACE SHUTTLE MISSIONS
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
SPACE STATIONS
Recent advances in teleoperation - Implications for the Space Station p 383 A86-40508
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
Space teleoperation research. American Nuclear Society Executive conference: Remote operations and robotics in the nuclear industry; remote maintenance in other hostile environments
[NASA-TM-89234] p 386 N86-29513
SPACE SUITS
EVA suit glove design p 383 A86-40521
The WPI space glove design project
p 383 A86-40522
Torso sizing ring construction for hard space suit
[NASA-CASE-ARC-11616-1] p 384 N86-29618
Elbow and knee joint for hard space suits
[NASA-CASE-ARC-11610-1] p 384 N86-29619
Shoulder and hip joint for hard space suits
[NASA-CASE-ARC-11543-1] p 384 N86-29620
Shoulder and hip joints for hard space suits and the like
[NASA-CASE-ARC-11534-1] p 385 N86-29507
SPACEBORNE ASTRONOMY
Exobiological aspects in view of Titan — Cassini Saturn mission p 387 N86-29668
SPACEBORNE EXPERIMENTS
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-29606
Proceedings and program draft in Gravitational Biology in the Federal Republic of Germany
[DFVLR-MITT-85-16] p 387 N86-29514
The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515
A theoretical concept for state changes and shape changes in weightlessness p 387 N86-29516
SPATIAL DISTRIBUTION
Components of spatial ability
[AD-A165694] p 382 N86-29616
SPATIAL RESOLUTION
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-29609
SPERMATOGENESIS
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson)
p 386 N86-29521
SPINAL CORD
Spinal cord decompression sickness - A comparison of recompression therapies in an animal model
p 372 A86-41784
SPONGES (MATERIALS)
The origin of the spicule skeleton of fresh water sponges (Spongillidae) p 386 N86-29519
STANDARDS
The new ANSI RF radiation exposure standard - Its background and impact p 371 A86-40519
STEREOSCOPIC VISION
The importance of stereoscopic imagery in flight simulation p 383 A86-40483
STERILIZATION
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-29622
STRESS (PHYSIOLOGY)
Hemodynamic correlates of immobilization stress in rats p 373 A86-43423
STRESS (PSYCHOLOGY)
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ)
[FOA-C-50034-H3] p 383 N86-29506
STRUCTURAL DESIGN CRITERIA
Reverse osmosis water purification system
p 384 N86-29291
STUDENTS
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-29617
SUITS
Suit penetration study: Preliminary analysis of flow about a circular cylinder
[DE86-005780] p 385 N86-29623
SWEDEN
Anthropometry research program
[FOA-C-50032-H2] p 386 N86-29511
SYNTHESIS (CHEMISTRY)
The synthesis of primitive 'living' forms - Definitions, goals, strategies and evolution synthesizers
p 372 A86-41045

T

TABLETS
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-29622
TASK COMPLEXITY
The detection of various color combinations under different chromatic ambient illuminations
p 378 A86-41783
TASKS
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N86-29504
TELEOPERATORS
Recent advances in teleoperation - Implications for the Space Station p 383 A86-40508
Space teleoperation research. American Nuclear Society Executive conference: Remote operations and robotics in the nuclear industry; remote maintenance in other hostile environments
[NASA-TM-89234] p 386 N86-29513
TENSILE PROPERTIES
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia
p 379 N86-29611
TEST FACILITIES
Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531
THERAPY
Spinal cord decompression sickness - A comparison of recompression therapies in an animal model
p 372 A86-41784
THERMOREGULATION
Phases of muscular thermogenesis under experimental hyperthyrosis p 373 A86-43425
THRESHOLDS (PERCEPTION)
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
THYROID GLAND
Phases of muscular thermogenesis under experimental hyperthyrosis p 373 A86-43425
TIBIA
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
TIME DEPENDENCE
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
TISSUES (BIOLOGY)
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
TITAN
Exobiological aspects in view of Titan — Cassini Saturn mission p 387 N86-29668
TORSO
Torso sizing ring construction for hard space suit
[NASA-CASE-ARC-11616-1] p 384 N86-29618
TOXICITY
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-29608
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-29622
TRACKING (POSITION)
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503
TRAINING DEVICES
Air Force uses computer lessons to train instructors, flight crews p 382 A86-41799
TRAINING SIMULATORS
Relationships among aircrew performance measures for evaluating flight simulator training effectiveness
p 381 A86-40479
Air Force uses computer lessons to train instructors, flight crews p 382 A86-41799
TRYPTOPHAN
Effects of consuming various foods and nutrients on objective and subjective aspects of human performance and behavior
[NASA-CR-177003] p 385 N86-29509
TYROSINE
Effects of consuming various foods and nutrients on objective and subjective aspects of human performance and behavior
[NASA-CR-177003] p 385 N86-29509

U

U.S.S.R.
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-29606
UNITED STATES
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-88223] p 375 N86-29606

V

VERTEBRATES
Proceedings and program draft in Gravitational Biology in the Federal Republic of Germany
[DFVLR-MITT-85-16] p 387 N86-29514
VESTIBULAR TESTS
What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction
p 377 A86-41645
VETERINARY MEDICINE
Monkeys as a source of viral diseases in man
[NASA-TM-78017] p 386 N86-29625
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-39BR] p 376 N86-29494
VIRUSES
Monkeys as a source of viral diseases in man
[NASA-TM-78017] p 386 N86-29625
VISION
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-29609
Function-dependent plasticity in the nervous system
p 389 N86-29526
VISUAL PERCEPTION
Resolution and scene detail performance of the visual system in flight simulation p 381 A86-40482
The human dual visual systems - Their importance in simulation p 381 A86-40485
What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction
p 377 A86-41645
The detection of various color combinations under different chromatic ambient illuminations
p 378 A86-41783
VISUAL PIGMENTS
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin
p 374 A86-43434
VISUAL TASKS
Visual display requirements for boom operator training in aerial refueling p 383 A86-40486

W

WAKEFULNESS
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-88231] p 379 N86-28613
WATER
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-29621
WATER RESOURCES
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-29621
WATER TREATMENT
Reverse osmosis water purification system
p 384 N86-29291
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165667] p 385 N86-29621

Evaluation of water sterilizing tablets
[AD-A165606] p 385 N86-28622
WEIGHTLESSNESS
Skeletal response to short-term weightlessness
[NASA-TM-88776] p 379 N86-29496
Weightlessness simulation: Physiological changes in fast and slow muscle

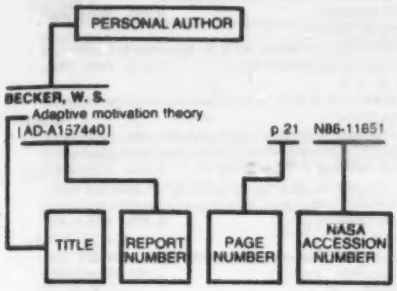
A theoretical concept for state changes and shape changes in weightlessness p 387 N86-29516
Some remarks on gravitational biology p 387 N86-29517
Investigations of Paramecium cells analyzed under microgravity conditions p 387 N86-29518
The origin of the spicule skeleton of fresh water sponges (Spongillidae) p 388 N86-29519
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson) p 388 N86-29521
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523
Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N86-29524
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N86-29525
Long-term adaptation of the otolith organs p 389 N86-29526
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
Function-dependent plasticity in the nervous system p 389 N86-29528
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530
Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531
Program draft for a special field: Gravitational biology p 390 N86-29532
WEIGHTLESSNESS SIMULATION
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
Morphology and development of the inner ear of Anurans p 389 N86-29529
WEST GERMANY
Applied biology and biotechnology, the program of the Federal government, 1985-1988
[ESA-86-96938] p 386 N86-28626
The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515
WORK CAPACITY
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
WORKLOADS (PSYCHOPHYSIOLOGY)
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N86-29504
WORKSTATIONS
The scientific/engineering workstation experiment: Preliminary results, conclusions and recommendations
[AD-A169059] p 386 N86-29610

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABELES, F. J.
Advanced EVA operation on-orbit tasks and services
[AIAA PAPER 86-1175] p 384 A86-40585
ADAMS, I. C.
The personality and physique of undergraduate aviation majors p 382 A86-40571
AHLSTROM, H. G.
Reverse osmosis water purification system
p 384 N86-28291
ALDERTON, D. L.
Components of spatial ability
[AD-A165694] p 382 N86-28616
ALEKPEROV, U. K.
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-29624
ALIYEV, A. A.
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds
[NASA-TM-87987] p 386 N86-29624
ANDERS, F.
Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development
p 388 N86-29523
ANTON, H. J.
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520
AULT, H. K.
The WPI space glove design project
p 383 A86-40522
AVEN, A.
Anthropometry research program
[FOA-C-50032-H2] p 386 N86-29511

B

BACK, L. H.
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
BAIRNSFATHER, L. E.
The effect of antimotion sickness drugs on habituation to motion p 377 A86-41780
BAUMANN, S.
Application of portable microprocessor-based system for electrophysiological field testing of neurotoxicity
[PB86-145471] p 379 N86-28615
BEKETOV, A. I.
Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness
p 373 A86-43422
BERG, S. L.
Effect of time span and task load on pilot mental workload
[NASA-CR-177099] p 382 N86-29502
BERGLUND, I.
Method for the determination of respiratory work in protective masks
[FOA-C-40213-C2] p 380 N86-29500
BIVIN, D. B.
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
BLAIR, H.
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40669
BLES, W.
What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction
p 377 A86-41645
BLUEM, V.
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson)
p 388 N86-29521
BOGOMOLNI, R. A.
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin
p 374 A86-43434
BOLONCHUK, W.
The personality and physique of undergraduate aviation majors p 382 A86-40571
BRACK, A.
Search for chiral molecules and optical activity in extraterrestrial systems. The Caseini mission opportunity
p 387 N86-28871
BRIEGLEB, W.
Some remarks on gravitational biology
p 387 N86-29517
BROWN, E. N.
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
BUCHHOLTZ, C.
A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N86-29525
BUCK, W. W.
On the biological hazard of galactic antinuclei
p 378 A86-43437
BUTLER, F. K., JR.
A blitz of bends - Decompression sickness in four students after hypobaric chamber training
p 378 A86-41790

C

CANAVERIS, G.
Intraventricular conduction disturbances in flying personnel Right bundle branch block
p 378 A86-41788
CERVENY, T. J.
Postradiation regional cerebral blood flow in primates
p 373 A86-41786
CHALY, N.
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins
p 371 A86-40675
CHAN, H. P.
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (Including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501
CHO, Y. I.
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
CLAPP, R.
The importance of stereoscopic imagery in flight simulation p 383 A86-40483
CLAPP, R. E.
Resolution and scene detail performance of the visual system in flight simulation p 381 A86-40482
Importance of color displays in visual flight simulation
p 381 A86-40484
The human dual visual systems - Their importance in simulation p 381 A86-40485
Visual display requirements for boom operator training in aerial refueling p 383 A86-40486
CLARKE, M. M.
Recent advances in teleoperation - Implications for the Space Station p 383 A86-40508
CLERE, J. M.
The choice of seat back angle to improve acceleration tolerance
[CEV-70-209] p 386 N86-29512
COCKERHAM, L. G.
Postradiation regional cerebral blood flow in primates
p 373 A86-41786
CRAWFORD, D. W.
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440

D

DAHL, F.
The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515
DAHLMAN, S.
Anthropometry research program
[FOA-C-50032-H2] p 386 N86-29511
DEMCHENKO, I. T.
Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness
p 373 A86-43422
DENG, Y. P.
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
DES MARAIS, D.
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40669
DETTBARN, W. D.
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-176945] p 380 N86-29498
DOI, K.
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (Including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501
DRIVER, G. E.
Evaluation of water sterilizing tablets
[AD-A165606] p 385 N86-28622
DUGUET, M.
Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A86-40679
DURGIN, W. W.
The WPI space glove design project
p 383 A86-40522

E

ECKMILLER, R.
Long-term adaptation of the otolith organs
p 389 N86-29526

EDEL, P.
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29489
EDELMAN, B.
Effect of spironolactone on acute mountain sickness
p 377 A86-41781
EPSTEIN, W.
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-29617

F

FORTERRE, P.
Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A86-40879
FREY, M. A. B.
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779
FRITZSCH, B.
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530
FROESE, R.
Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531
FULCO, C. S.
Effect of spironolactone on acute mountain sickness
p 377 A86-41781

G

GAGE, K. P.
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
GANDER, P. H.
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A86-40684
GARDENIER, J. S.
Simulators; Proceedings of the Conference, Norfolk, VA, March 3-8, 1985 p 381 A86-40476
GASSET, G.
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787
GAUBIN, Y.
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787
GAWRON, V. J.
Human performance simulation - Combining the data
p 381 A86-40480
GLENBERG, A. M.
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-29617
GOFORTH, G. A.
A blitz of bends - Decompression sickness in four students after hypobaric chamber training
p 378 A86-41790
GOLDBERGER, A. L.
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177085] p 380 N86-29497
GOMERSALL, E. W.
US monkey and rat experiments flown on the Soviet Satellite Cosmos 1514
[NASA-TM-86223] p 375 N86-28606
GRAEBER, R. C.
Phase shifting two coupled circadian pacemakers - Implications for jet lag p 377 A86-40684
Crew factors in flight operations. Part 4: Sleep and wakefulness in international aircrews
[NASA-TM-86231] p 379 N86-28613
GRAYBIEL, A.
Cardiovascular epidemiology, exercise, and health - 40-year followup of the U.S. Navy's '1000 aviators'
p 378 A86-41789
GREENLEAF, J. E.
Water and electrolytes p 376 A86-40660
GRUNZ, H.
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522

H

HAINES, R. F.
Displacement thresholds in central and peripheral vision during tracking p 378 A86-41782
HALL, G. E.
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 376 A86-43453
HALL, L. M.
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A86-41046
HALLENBECK, J. M.
Spinal cord decompression sickness - A comparison of recompression therapies in an animal model
p 372 A86-41784
HAMES, P. S.
Reverse osmosis water purification system
p 384 N86-28291
HAMMER, J. M.
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
HAMPTON, J. D.
Postradiation regional cerebral blood flow in primates
p 373 A86-41780
HANCOCK, A. T.
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-28622
HARDING, R.
Physiological problems of ascent to altitude
p 376 A86-40566
HARRISON, D. C.
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
HARRISON, M. H.
Water and electrolytes p 376 A86-40660
HEARD, J. G.
Response of enlarged alveolar vessels to acute hypoxia p 378 A86-41785
HEINZ, E.
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
HELGERSON, S. L.
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436
HERTWIG, I.
Morphology and development of the inner ear of Anurans p 389 N86-29529
HIGASHIDA, Y.
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501
HOCHSTEIN, L. I.
Halobacterium denitrificans sp. nov., an extremely halophilic denitrifying bacterium p 374 A86-43438
HOFFLER, G. W.
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779
HOFFMAN, A. H.
The WPI space glove design project
p 383 A86-40522
HORDINSKY, J.
EVA suit glove design p 383 A86-40521
HORN, E.
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
Program draft for a special field: Gravitational biology
p 390 N86-29532
HORNECK, G.
Exobiological aspects in view of Titan
p 387 N86-28868
HSIA, P.-W.
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
HUDSON, D. E.
The new ANSI RF radiation exposure standard - Its background and impact p 371 A86-40519

I

IBRAGIMOV, Y. I.
Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia
p 379 N86-29611

J

JACOB, S.
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442
JANNKE, L. L.
Halobacterium denitrificans sp. nov., an extremely halophilic denitrifying bacterium p 374 A86-43438
JAMES, K. W.
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-28622
JASPERS, S. R.
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442
JEE, W. S. S.
Effects of N,N,N',N'-Ethylenediaminetetramethylene phosphonic acid and 1-Hydroxyethylidene-1,1-bisphosphonic acid on calcium absorption, plasma calcium, longitudinal bone growth, and bone histology in the growing rat p 374 A86-43444
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450
JELKMANN, W.
Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N86-29524
JENKINS, J. M.
An automated system for ST segment and arrhythmia analysis in exercise radionuclide ventriculography
p 377 A86-41400
JENSEN, R. S.
The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177036] p 383 N86-29505

K

KELLY, P. A.
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503
KEMP, J. W.
Effects of N,N,N',N'-Ethylenediaminetetramethylene phosphonic acid and 1-Hydroxyethylidene-1,1-bisphosphonic acid on calcium absorption, plasma calcium, longitudinal bone growth, and bone histology in the growing rat p 374 A86-43444
KENNY, A. D.
Role of carbonic anhydrase in bone - Partial inhibition of disuse atrophy of bone by parenteral acetazolamide
p 374 A86-43448
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 375 A86-43453
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A86-43454
KIERSZENBAUM, F.
Enhancing effects of gamma interferon on phagocytic cell association with and killing of Trypanosoma cruzi
p 371 A86-40866
KLAPP, S. T.
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503
KNAEUPER, A. E.
Pilot interaction with automated airborne decision making systems
[NASA-CR-177002] p 385 N86-29508
KOBUS, D. A.
The detection of various color combinations under different chromatic ambient illuminations
p 378 A86-41783
KODERA, Y.
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501
KORTE, D. W., JR.
Acute oral toxicity (LD50) of guanidine hydrochloride in rats
[AD-A165747] p 376 N86-28608
KOTAKA, S.
What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction
p 377 A86-41645
KOUYAMA, T.
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin
p 374 A86-43434

KOVALEV, E. E.
Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays
p 373 A86-41787

KOZYREVA, T. V.
Development of responses to noradrenalin injection in control and cold-adapted rats p 373 A86-43424

KRONAUER, R. E.
Phase shifting two coupled circadian pacemakers - implications for jet lag p 377 A86-40684

KWONG, E.
Carbon isotopic fractionation in heterotrophic microbial metabolism p 371 A86-40689

L

LACEY, J. C., JR.
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A86-41046

LAHAV, N.
The synthesis of primitive 'living' forms - Definitions, goals, strategies and evolution synthesizers
p 372 A86-41045

LAPENKO, N. T.
Phases of muscular thermogenesis under experimental hyperthyroesis p 373 A86-43425

LARSEN, R. F.
Effect of spironolactone on acute mountain sickness
p 377 A86-41781

LARSSON, G.
Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ)
[FOA-C-50034-H3] p 383 N86-29506

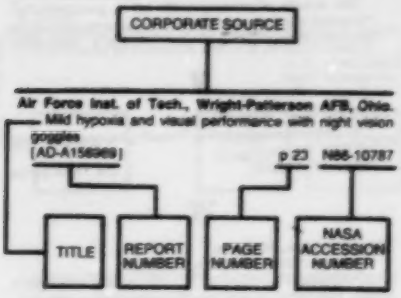
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Alabama Univ., Birmingham.
Chirally selective, intramolecular interaction observed in an aminoacyl adenylate anhydride p 372 A86-41046

Arizona Univ., Tucson.
Metabolism of amino acids by the atrophied soleus of tail-casted, suspended rats p 374 A86-43442

Armed Forces Food Science Establishment, Scottsdale (Australia).
Evaluation of water sterilizing tablets
[AD-A165806] p 385 N86-29622

Armed Forces Radiobiology Research Inst., Bethesda, Md.
AFRRI (Armed Forces Radiobiology Research Institute)
[AD-A165810] p 379 N86-29614

Army Belvoir Research and Development Center, Fort Belvoir, Va.
Development of U.S. Army reverse osmosis water purification equipment
[AD-A165867] p 385 N86-29621

B

Bielefeld Univ. (West Germany).
Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530

Bionetics Corp., Cocoa Beach, Fla.
Cardiovascular responses of women to lower body negative pressure p 377 A86-41779

Bonn Univ. (West Germany).
The origin of the spicule skeleton of fresh water sponges (Spongillidae) p 388 N86-29519
Morphology and development of the inner ear of Anurans p 389 N86-29529

Bundesministerium fuer Forschung und Technologie, Bonn (West Germany).
Applied biology and biotechnology, the program of the Federal government, 1985-1988
[ESA-86-86038] p 386 N86-28626

C

California Inst. of Tech., Pasadena.
Information processing in mammalian visual cortex
[AD-A165832] p 376 N86-28609

California State Univ., Hayward.
Hesitations in continuous tracking induced by a concurrent discrete task
[NASA-CR-177019] p 382 N86-29503

California Univ., Los Angeles.
Model-based approaches for partitioning subjective workload assessments
[NASA-CR-177030] p 382 N86-29504

California Univ., San Diego.
Cardiac reserve during weightlessness simulation and shuttle flight
[NASA-CR-177085] p 380 N86-29497

California Univ., San Francisco.
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433
Photoconversion from the light-adapted to the dark-adapted state of bacteriorhodopsin p 374 A86-43434
Transient proton inflows during illumination of anaerobic Halobacterium halobium cells p 374 A86-43436

California Univ., Santa Barbara.
Components of spatial ability
[AD-A165894] p 382 N86-28616

Centre d'Essais en Vol, Istres (France).
The choice of seat back angle to improve acceleration tolerance
[CEV-70-209] p 386 N86-29512

Centre National de la Recherche Scientifique, Orleans (France).
Search for chiral molecules and optical activity in extraterrestrial systems. The Cassini mission opportunity p 367 N86-28871

Chicago Univ., Ill.
MTF's and Wiener spectra of radiographic screen-film systems. Volume 2: (Including speeds of screens, films and screen-film systems)
[PB86-184934] p 380 N86-29501

Cologne Univ. (West Germany).
Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520

Cornell Univ., New York, N.Y.
Coupling between the bacteriorhodopsin photocycle and the protonmotive force in Halobacterium halobium cell envelope vesicles. III - Time-resolved increase in the transmembrane electric potential and modeling of the associated ion fluxes p 373 A86-43433

D

Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Cologne (West Germany).
Exobiological aspects in view of Titan p 387 N86-28868
Proceedings and program draft in Gravitational Biology in the Federal Republic of Germany
[DFVLR-MITT-85-16] p 387 N86-29514
The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515
Some remarks on gravitational biology p 387 N86-29517

Duesseldorf Univ. (West Germany).
Long-term adaptation of the otolith organs p 389 N86-29526

E

Essen Univ. (West Germany).
Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522

F

Florida State Univ., Tallahassee.
Microtubule configurations during fertilization, mitosis, and early development in the mouse and the requirement for egg microtubule-mediated motility during mammalian fertilization p 371 A86-40674
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins p 371 A86-40675

G

General Accounting Office, Washington, D. C.
Biotechnology: The US Department of Agriculture's biotechnology research efforts
[GAO/RCED-86-39BR] p 376 N86-29494

Georgia Inst. of Tech., Atlanta.

The effects of expressivity and flight task on cockpit communication and resource management
[NASA-CR-177096] p 363 N86-29505
Ottawa Univ. (Ontario).
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins p 371 A86-40675

P

Pittsburgh Univ., Pa.
Enzyme cofactor modified electrodes
[AD-A165604] p 375 N86-28607

R

Research Inst. of National Defence, Stockholm (Sweden).
Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ)
[FOA-C-50034-H3] p 383 N86-29506
Anthropometry research program
[FOA-C-50032-H2] p 366 N86-29511
Research Inst. of National Defence, Umea (Sweden).
Method for the determination of respiratory work in protective masks
[FOA-C-40213-C2] p 380 N86-29500
Ruhr Univ., Bochum (West Germany).
Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson) p 368 N86-29521

S

Santa Clara Univ., Calif.
Halobacterium denitrificans sp. nov., an extremely halophilic denitrifying bacterium p 374 A86-43438
Sea-Space Research Co., Inc., Harvey, La.
Evaluation of the use of hydrogen-oxygen as a breathing gas in deep-sea diving
[AD-A165797] p 380 N86-29499
Southwest Research Inst., San Antonio, Tex.
Effects of 60 Hz electric fields on operant and social stress behavior of nonhuman primates
[DE86-005067] p 390 N86-29533
Stanford Univ., Calif.
Effects of simulated weightlessness on regional blood flow specifically during cardiovascular stress
[NASA-CR-177117] p 379 N86-29495
Stuttgart Univ. (West Germany).
A theoretical concept for state changes and shape changes in weightlessness p 387 N86-29516
Function-dependent plasticity in the nervous system p 369 N86-29528

T

Texas Technological Univ., Lubbock.
Role of carbonic anhydrase in bone - Partial inhibition of disuse atrophy of bone by parenteral acetazolamide p 374 A86-43448
Role of carbonic anhydrase in bone resorption induced by 1,25 dihydroxyvitamin D3 in vitro p 375 A86-43449
Role of carbonic anhydrase in bone resorption induced by prostaglandin E2 in vitro p 375 A86-43453
Role of carbonic anhydrase in bone - Plasma acetazolamide concentrations associated with inhibition of bone loss p 375 A86-43454

U

Ulm Univ. (West Germany).
Functional development of gravity receptors in insects and amphibians p 389 N86-29527
Program draft for a special field: Gravitational biology p 390 N86-29532
University of Southern California, Los Angeles.
Measurement and prediction of flow through a replica segment of a mildly atherosclerotic coronary artery of man p 374 A86-43440
Utah Univ., Salt Lake City.
Effects of N,N,N',N'-Ethylenediaminetetramethylene phosphonic acid and (1-Hydroxyethylidene-1,1-bisphosphonic acid on calcium absorption, plasma calcium, longitudinal bone growth, and bone histology in the growing rat p 374 A86-43444
The effects of prostaglandin E2 in growing rats - Increased metaphyseal hard tissue and cortico-endosteal bone formation p 375 A86-43450

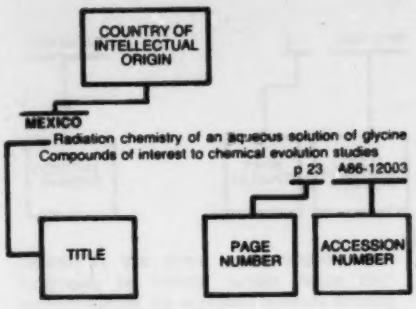
V

Vanderbilt Univ., Nashville, Tenn.
Weightlessness simulation: Physiological changes in fast and slow muscle
[NASA-CR-178945] p 390 N86-29498

W

Wisconsin Univ., Madison.
Inexpert calibration of comprehension
[AD-A165701] p 382 N86-28617
Wistar Inst. of Anatomy and Biology, Philadelphia, Pa.
Nuclear lamins and peripheral nuclear antigens during fertilization and embryogenesis in mice and sea urchins p 371 A86-40675
Worcester Polytechnic Inst., Mass.
The WPI space glove design project p 383 A86-40522

Typical Foreign Technology Index Listing



COUNTRY OF INTELLECTUAL ORIGIN
MEXICO
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies
p 23 A86-12003
TITLE
PAGE NUMBER
ACCESSION NUMBER

Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

ARGENTINA

Quantification of pilot fatigue - A new approach to a crucial problem p 376 A86-40231

Intraventricular conduction disturbances in flying personnel Right bundle branch block p 378 A86-41788

AUSTRALIA

Evaluation of water sterilizing tablets [AD-A165806] p 385 N86-28622

B

BAHRAIN

The personality and physique of undergraduate aviation majors p 382 A86-40571

C

CHILE

Conservation of the secondary structure of protein during evolution and the role of the genetic code p 372 A86-41047

F

FRANCE

Positively supercoiled DNA in a virus-like particle of an archaebacterium p 372 A86-40879

Stimulating effect of space flight factors on Artemia cysts Comparison with irradiation by gamma rays p 373 A86-41787

Search for chiral molecules and optical activity in extraterrestrial systems. The Cassini mission opportunity p 387 N86-28871

The choice of seat back angle to improve acceleration tolerance [CEV-70-209] p 386 N86-29512

G

GERMANY,FEDERAL REPUBLIC OF

Applied biology and biotechnology, the program of the Federal government, 1985-1988 [ESA-86-96938] p 386 N86-28626

Exobiological aspects in view of Titan p 387 N86-28868

Proceedings and program draft in Gravitational Biology in the Federal Republic of Germany [DFVLR-MITT-85-16] p 387 N86-29514

The role of the DFVLR project management life sciences in the space program of the Federal Republic of Germany p 387 N86-29515

A theoretical concept for state changes and shape changes in weightlessness p 387 N86-29516

Some remarks on gravitational biology p 387 N86-29517

Investigations of Paramecium cells analyzed under microgravity conditions p 387 N86-29518

The origin of the spicule skeleton of fresh water sponges (Spongillides) p 388 N86-29519

Limb regeneration in amphibians, a suitable model for investigations of the effects of weightlessness as regards evolution and modifications p 388 N86-29520

Investigations of the reproductive physiology of the rainbow trout (Salmo gairdneri Richardson) p 388 N86-29521

Changes in the morphological and molecular biological processes during early embryo development in amphibians under micro g conditions p 388 N86-29522

Xiphophorus: A system to recognize radiation-induced mutations and to study the effects of zero-gravity environment on embryo development p 388 N86-29523

Hypoxic hypoxia as a stimulus of Erythropoiesis in vivo and in vitro p 388 N86-29524

A learning model as a basis for investigations of the effects of gravity on the learning processes and memory formulation p 389 N86-29525

Long-term adaptation of the otolith organs p 389 N86-29526

Functional development of gravity receptors in insects and amphibians p 389 N86-29527

Function-dependent plasticity in the nervous system p 389 N86-29528

Morphology and development of the inner ear of Anurans p 389 N86-29529

Questions on the evolution of the developmental program of the vertebrate inner ear under long term zero g conditions p 389 N86-29530

Long duration confinement of aquatic organisms in weightlessness (aquaspace) p 389 N86-29531

Program draft for a special field: Gravitational biology p 390 N86-29532

I

ISRAEL

The synthesis of primitive 'living' forms - Definitions, goals, strategies and evolution synthesizers p 372 A86-41045

J

JAPAN

What is the parameters for the prediction of seasickness susceptibility? - On the point of view for visual-vestibular-somatosensory interaction p 377 A86-41645

S

SWEDEN

Method for the determination of respiratory work in protective masks [FOA-C-40213-C2] p 380 N86-29500

Rapid measurement of individual stress reaction level: Development of the Emotional Reaction Questionnaire (ESRQ) [FOA-C-50034-H3] p 383 N86-29506

Anthropometry research program [FOA-C-50032-H2] p 386 N86-29511

U

U.S.S.R.

Circulation and oxygen tension in the brain of wakeful rabbits in conditions leading to motion sickness p 373 A86-43422

Hemodynamic correlates of immobilization stress in rats p 373 A86-43423

Development of responses to noradrenalin injection in control and cold-adapted rats p 373 A86-43424

Phases of muscular thermogenesis under experimental hyperthyroeis p 373 A86-43425

USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-009] p 376 N86-28610

Resistance, exchange, and capacitance functions of skeletal muscle vessels in acute hypoxic hypoxia p 379 N86-29511

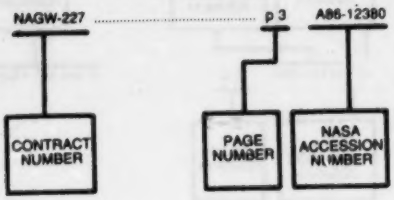
Modification of cytogenetic and physiological effects of space flight factors by biologically active compounds [NASA-TM-87967] p 386 N86-28624

Monkeys as a source of viral diseases in man [NASA-TM-78017] p 386 N86-28625

UNITED KINGDOM

Physiological problems of ascent to altitude p 376 A86-40566

Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

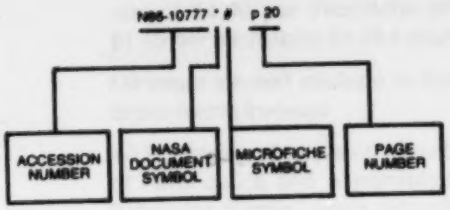
Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 291)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in November 1986 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1986

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A04.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 131 reports, articles and other documents announced during November 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR,* including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes — subject, personal author, corporate source, foreign technology, contract, report number, and accession number — are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 391
Includes genetics.

Category 52 Aerospace Medicine 394
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 403
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 405
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 410
Includes exobiology; and extraterrestrial life.

Subject Index A-1

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

ALTERATION OF RAT BRAIN CATECHOLAMINE LEVELS UNDER HYPOXIA
I. SAKURAI and A. NAKAMURA Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, Dec. 1985, p. 181-186. In Japanese, with abstract in English. refs

An investigation was conducted to ascertain the effects that hypobaric and hypoxic hypoxia have on catecholamine (CA) synthesis in the brain of a rat. Male Wistar rats were exposed to either a simulated altitude of 18,000 ft (corresponding to 10.5 percent O2) for a time period approaching 72 hrs or to hypoxic gas mixtures (10, 7 and 6 percent O2) for a period of 2 hrs. Norephinephrine (NE) concentration decreased initially and then stabilized at the control level despite continued hypoxic conditions at 18,000 ft. Dopamine (DA) levels significantly increased upon 6 hrs of hypoxic exposure and ultimately stabilized at the control level. The increment at which DA decreased upon 2 hrs of hypoxic exposure was parallel to the severity of the hypoxia. The NE concentration decreased linearly with the concentration of oxygen present during exposure. K.K.

THE ROLE OF GRAVITY IN PRODUCING DIGESTIVE SYSTEM CHANGES [O ROLI GRAVITATSIONNOGO FAKTORA V FORMIROVANII IZMENENII PISHCHEVARITEL'NOI SISTEMY]
K. V. SMIRNOV Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, April 1986, p. 484-489. In Russian. refs

The effect of sustained weightlessness on the activities of gastraintestinal proteases, carbohydrases, and lipases was investigated in rats flown aboard the Cosmos 782, 936, and 1129 biosatellites. Homogenized gastric mucosa and pancreas and homogenized and intact mucosa of small intestine were analyzed 5-6 h after landing. Compared with the ground-based controls, rats exposed to weightlessness exhibited activation of proteolytic enzymes and pancreatic lipase and suppression of amylase activity. The activity of intestinal lipase was redistributed: a decrease in the proximal segment was accompanied with a significant increase in the distal end. The morphological examination of gastric mucosa revealed signs of hypersecretion syndrome. The use of artificial gravity during flights had a normalizing effect on proteolytic enzymes but suppressed the activity of pancreatic amylase even more and had no effect on lipolytic activities. Twenty-five days after the landing, enzyme activities were close to control levels. I.S.

MODELS OF DISUSE - A COMPARISON OF HINDLIMB SUSPENSION AND IMMOBILIZATION
R. H. FITTS, J. M. METZGER, D. A. RILEY, and B. R. UNSWORTH (Marquette University; Wisconsin, University, Milwaukee) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, June 1986, p. 1946 1953. refs
(Contract NAG2-212; NCC2-266)

The effects of 1 and 2 weeks of hindlimb suspension (HS) on the contractile properties of fast- and slow-twitch skeletal muscles of male Sprague Dawley rats are studied and compared with hindlimb immobilization (HI) data. The optimal length and contractile properties of the slow-twitch soleus, fast-twitch extensor digitorum longus, and the vastus lateralis are measured. It is observed that HS and HI affect slow-twitch muscles; isometric twitch duration in the slow-twitch soleus is decreased. Soleus muscle mass and peak tetanic tension declines with disuse. A major difference in the influence of HS and HI on the maximal speed of soleus muscle shortening, V(max) is detected; HS produced a twofold increase in V(max) compared to control data and HI had no significant effect on V(max). The relation between V(max) and myosin concentration is analyzed. The data reveal that HS modifies slow-twitch muscle yielding hybrid fibers with elevated shortening velocities and this change may be dependent on the elimination of load-bearing contractions. I.F.

A86-44197
HOW WELL MIXED IS INERT GAS IN TISSUES?
L. D. HOMER and P. K. WEATHERSBY (U.S. Navy, Naval Medical Research Institute, Bethesda, MD) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, June 1986, p. 2079-2088. Navy-supported research. refs

Potential mechanisms which cause multiexponential curves for washout of inert gas from tissues are examined. Computer simulations of the random walk of gas molecules across a capillary bed are conducted and the data reveal that heterogeneity in adjacent capillaries does not cause significant relative dispersion to produce the curves. The effect of variable flow and transit time on the relative dispersion are studied. The countercurrent exchange and isotropic diffusion are analyzed. It is observed that variations in spacing and countercurrent exchange between capillaries do not produce the multiexponential character of tissue washout curves. Simple diffusion calculations are utilized to display that gas molecules can wander up to several millimeters away from their entry point during an average transit through a tissue bed. It is noted that gas molecules enter and exit tissues from vessels larger than 20 microns in diameter rather than capillaries. A hypothesis that the multiexponential character of skeletal muscle tissue inert gas washout curves are due to either heterogeneity

between tissue regions separated by 3 mm or more, or to countercurrent exchange in vessels larger than 2 microns in diameter is proposed. I.F.

A86-44295
THE PHOTOBIOLOGICAL ASPECTS OF RADIATION DAMAGE IN CELLS [FOTOBIOLOGICHESKIE ASPEKTY RADIATSIONNOGO PORAZHENIIA KLETOK]
M. N. MIASNIK, V. G. SKVORTSOV, and V. A. SOKOLOV Moscow, Energoatomizdat, 1985, 152 p. In Russian. refs

The cellular and molecular mechanisms of radiation damage caused in microorganisms by ionizing radiation and UV light are described, together with the mechanisms of photoreactivation by visible light. The role of DNA-located pyridine dimers in such radiobiological phenomena as the oxygen effect, radioprotective effects, and the relative biological effectiveness of ionizing radiation is considered. Special attention is given to photorecoverable damages connected with Cerenkov radiation. A biophysical model is presented for bacterial cells reacting to radiation by gamma rays. I.S.

A86-45251* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
CONTINUOUS BLOOD DENSITOMETRY - FLUID SHIFTS AFTER GRADED HEMORRHAGE IN ANIMALS
H. HINGHOFER-SZALKAY (NASA, Ames Research Center, Moffett Field, CA; Graz, Universitaet, Austria) American Journal of Physiology: Heart and Circulatory Physiology (ISSN 0363-6135), vol. 19, 1986, p. H342-H350. refs
(Contract FFWF PROJECT 3470)

Rapid fluid shifts in four pigs and two dogs subjected to graded hemorrhage are investigated. Arterial blood density (BD), mean arterial pressure (MAP), central venous pressure (CVP), arterial plasma density (PD), hematocrit (Hct) and erythrocyte density were measured. The apparatus and mechancial oscillator technique for measuring density are described. Fluid shifts between red blood cells and blood plasma and alterations in the whole-body-to-large vessel Hct, F(cell) are studied using two models. The bases of the model calculations are discussed. A decrease in MAP, CVP, and BP is detected at the beginning of hemorrhaging; continued bleeding results in further BD decrease correlating with volume displacement. The data reveal that at 15 ml/kg blood loss the mean PD and BD dropped by 0.99 + or - 0.15 and 2.42 + or 0.26 g/liter, respectively, and the Hct dropped by 2.40 + or 0.47 units. The data reveal that inward-shifted fluid has a higher density than normal ultrafiltrate and/or there is a rise in the F(cell) ratio. It is noted that rapid fluid replacement ranged from 5.8 + or - 0.8 to 10.6 + or - 2.0 percent of the initial plasma volume. I.F.

A86-45318
THE EFFECTS OF CEREBRAL HYPOXIA AND HYPERVENTILATORY HYPOCAPNIA ON THE EPILEPTIFORM ACTIVITY IN THE CEREBRAL CORTEX OF CATS [DEISTVIE TSEREBRAL'NOI GIPOKSII I GIPERVENTILIATSIONNOI GIPOKAPNII NA EPILEPTIFORMNUIU AKTIVNOST' KORY BOL'SHIKH POLUSHARII KOSHKI]
S. I. FRANKSHTEIN, L. N. SMOLIN, and L. N. SERGEEVA (Institut Obshchoi Patologii i Patologicheskoi Fiziologii, Moscow, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 576-579. In Russian. refs

A86-45319
THE SUPPRESSIVE EFFECT OF CARBON DIOXIDE ON THE ACTIVATION OF COLD RECEPTORS IN THE NASAL CAVITY OF CATS [PODAVLIAIUSHCHEE VLIIANIE DVUOKISI UGLERODA NA VOZBUZHDENIE KHOLODOVYKH RETSEPTOROV POLOSTI NOSA KOSHKI]
V. D. GLEBOVSKII and A. V. BAEV (Pediatricheskii Meditsinskii Institut, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 595-602. In Russian. refs

The effect of carbon dioxide concentration in the air passing through the nasal cavity on the afferent fiber impulse activity were studied in decerebrated cats. Passage of air through the nasal cavity in the direction from the nostrils to the choanes effected strong activation of cold receptors in the nasal cavity walls. When air was drawn in the opposite direction (i.e., 'exhaled'), the receptors' activity decreases. When a 1, 3, or 6-percent CO2-air mixture was blown through the nasal cavity, the cold receptor activity became depressed in direct proportion to the CO2 concentration. Thus, like the receptors in the process that regulates lung distension, the cold thermoreceptors in the nasal cavity possess characteristics of chemoreceptors. I.S.

A86-45320
CORRELATIONS BETWEEN THE LEVELS OF CEREBRAL BLOOD FLOW AND CEREBROVASCULAR REACTIVITY AND THE FUNCTIONAL STATE OF BRAIN TISSUE [O VZAIMOSVIAZI UROVNIA KROVOTOKA I REAKTIVNOSTI MOZGOVYKH SOSUDOV S FUNKTSIONAL'NYM SOSTOIANIEM TKANI MOZGA]
B. V. GAIDAR, V. N. SEMERNIA, and G. B. VAINSHTEIN (AN SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii; Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 603-611. In Russian. refs

Changes in the cerebral blood flow and reactivity of brain vessels to CO2, taking place during the process of brain restoration, were studied in rabbits with experimental local brain lesions. In the zones within a 15-mm distance from the lesion focus, a decrease in the local blood flow was observed, with a minimum on the 2nd to 5th day after the lesion, followed by normalization on the 10th-14th day. The cerebrovascular reactivity to CO2 decreased and returned to normal in a fashion similar to that exhibited by the blood flow, indicating that the vascular reactivity can serve as a valuable criterion in evaluating the process of functional restoration in brain tissue. I.S.

A86-45321
CHANGES IN PERICARDIAL MICROCIRCULATION IN DOGS DURING ADAPTATION TO STATIC MUSCLE LOADS [IZMENENIIA MIKROTSIRKULIATSII PERIKARDA U SOBAK PRI ADAPTATSII K STATICHESKIM MYSHECHNYM NAGRUZKAM]
V. A. SHESTAKOV, A. V. MURAVEV, and L. G. ZAITSEV (Gosudarstvennyi Pedagogicheskii Institut, Yaroslavl, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 625-631. In Russian. refs

Physiological changes in cardiovascular and respiratory systems were correlated with morphological changes taking place in the pericardial microcirculatory system of dogs adapted for 6 weeks to loads sustained daily for 1 hr at a time. The observed changes in pulse rate, respiratory rate, oxygen consumptions, and vascular permeability, which indicated increased efficiency of the cardiovascular and respiratory systems, were accompanied by beneficial morphological changes in the pericardial microcirculation. These changes included decreased vascular diffusion area, capillary diameters, and blood volume, and an increased number of capillary vessels. All changes reversed during deadaptation. I.S.

A86-45322
THE CONTRACTILE FUNCTION AND THE ENERGY METABOLISM OF THE MYOCARDIUM UNDER EMOTIONAL STRESS AND DURING ADAPTATION OF ANIMALS TO SHORT STRESS EFFECTS [SOKRATITEL'NAIA FUNKTSIIA I ENERGETICHESKII METABOLIZM MIOKARDA PRI EMOTSIONAL'NOM STRESSE I ADAPTATSII ZHIVOTNYKH K KOROTKIM STRESSORNYM VOZDEISTVIIAM]
V. V. MALYSHEV, L. S. KATKOVA, V. I. LIFANTEV, and T. P. DVORETSKAIA (Gosudarstvennyi Meditsinskii Institut, Irkutsk, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 632-636. In Russian. refs

A86-45323
THE EFFECT OF HYPOXIA ON THE DYNAMICS OF THE PERIPHERAL LYMPH FLOW [DINAMIKA IZMENENII PERIFERICHESKOGO LIMFOTOKA PRI DEISTVII GIPOKSII]
S. G. TOPOROVA (Tadzhikskii Gosudarstvennyi Meditsinskii Institut Dushanbe, Tadzhik SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 642-649. In Russian. refs

The effect of hypoxia (1-60 min at 5000 m in a decompression chamber) on the dynamics of the direction and speed of the lymph flow in the mesenteric vessels of rats with exposed mesenterium was investigated by means of an attached microscopic installation. The vessels' locomotor reaction to hypoxia and the changes in the vessel valve activity were also observed. Five minutes after introduction of the hypoxic condition, an increase in the lymph flow was observed, due to the following compensatory changes in the lymph vessels: a vasodilation, a decrease in the frequency of the spontaneous changes in the vessel lumen and an increase in the amplitude of these changes, and a synchronization of locomotion in lymphangiomas. During the duration of hypoxia the lymph valves remained open, with a steady distance maintained between the cuspate ends, except for brief periods of closing during equilibration of hydrostatic pressure between adjacent vessel segments. It is suggested that the funnel-like shape of the lymph valve causes a hydrostatic pressure drop (due to increased flow speed), in its narrow segment leading to a sucking effect, which in turn promotes lymph movement. I.S.

A86-45324
THE CONTENT OF LACTIC ACID IN THE BLOOD AND ERYTHROPOIESIS DURING HYPOXIA [SODERZHANIE MOLOCHNOI KISLOTY V KVOVI I ERITROPOEZ V USLOVIIAKH GIPOKSII]
M. IA. SHCHUKINA (AN KSSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogori'ia Frunze, Kirgiz SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, May 1986, p. 668-672. In Russian. refs

The effects of acute blood loss and elevated altitude on the blood titers of lactic acid, erythrocytes, and hemoglobin were studied in rats bled to 20 to 25 percent blood loss and adapted to 760 m above the sea level, and then to 1700 m. Acute blood loss caused a threefold increase in lactic acid concentration as soon as 20 min after the bleeding, while the erythropoietic indices changed only days later. By the time the hemoglobin and erythrocyte titers increased significantly, the lactic acid titer was again at the control level. The degree of lactacemia was found to decrease with adaptation to high altitude, and was lower in female, compared with male, rats. The observed sequence of the lactacemic and erythropoietic changes supports the hypothesis of the lactacemia-induced onset of erythropoiesis. I.S.

A86-45960* Salk Institute for Biological Studies, San Diego, Calif.
TEMPLATE-DIRECTED OLIGONUCLEOTIDE LIGATION ON HYDROXYLAPATITE
O. L. ACEVEDO and L. E. ORGEL (Salk Institute for Biological Studies, San Diego, CA) Nature (ISSN 0028-0836), vol. 321, June 19, 1986, p. 790-792. refs
(Contract NGR-05-067-001)

It has been suggested that the prebiotic synthesis of the precursors of biopolymers could have occurred on a solid surface such as that provided by clay or some other mineral. One such scheme envisages that growing polymers were localized by adsorption to a mineral surface where an activating agent or activated monomers were supplied continuously or cyclically. Here, it is reported that a sequence of reactions in which initially formed oligo(G)s are reactivated by conversion to phosphorimidazolides in the presence of poly(C) and then allowed to ligate is ideal, in that repeated cycles can be carried out on the surface of hydroxylapatite, whereas in the liquid phase the cycle could be achieved only with considerable difficulty. C.D.

SPACE STATION - LIFE SCIENCES
R. S. YOUNG (Management and Technical Services Co., Washington, DC) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 4 p.
(AIAA PAPER 86-2346)

The use of the Space Station for biomedical research and the study of biological cellular and subcellular processes is described. The research will require: (1) a health maintenance facility, (2) a life science research facility, and (3) instruments and platforms for automatic experiments. Experiments analyzing physiological changes induced by microgravity and the relationship between gravity, cellular and organismal physiology, and biochemistry are to be performed on the Station. The development of closed ecological life support systems is to be studied on the Space Station. The Station's facilities are also to be utilized to examine the interaction of the earth's biota with the planet environment, and the origin, evolution, and distribution of life throughout the universe. I.F.

LIFE SCIENCES SPACE STATION PLANNING DOCUMENT: A REFERENCE PAYLOAD FOR THE LIFE SCIENCES RESEARCH FACILITY
Aug. 1986 132 p
(NASA-TM-89188; NAS 1.15:89188) Avail: NTIS HC A07/MF A01 CSCL 06B

The Space Station, projected for construction in the early 1990s, will be an orbiting, low-gravity, permanently manned facility providing unprecedented opportunities for scientific research. Facilities for Life Sciences research will include a pressurized research laboratory, attached payloads, and platforms which will allow investigators to perform experiments in the crucial areas of Space Medicine, Space Biology, Exobiology, Biospherics and Controlled Ecological Life Support System (CELSS). These studies are designed to determine the consequences of long-term exposure to space conditions, with particular emphasis on assuring the permanent presence of humans in space. The applied and basic research to be performed, using humans, animals, and plants, will increase our understanding of the effects of the space environment on basic life processes. Facilities being planned for remote observations from platforms and attached payloads of biologically important elements and compounds in space and on other planets (Exobiology) will permit exploration of the relationship between the evolution of life and the universe. Space-based, global scale observations of terrestrial biology (Biospherics) will provide data critical for understanding and ultimately managing changes in the Earth's ecosystem. The life sciences community is encouraged to participate in the research potential the Space Station facilities will make possible. This document provides the range and scope of typical life sciences experiments which could be performed within a pressurized laboratory module on Space Station. Author

ADVANTAGES OF THE GAS EXCHANGE APPROACH TO MICROBIOLOGICAL STUDIES Memorandum Report, 1983 - 1985
P. J. HANNAN and D. S. JONES 3 Apr. 1986 43 p
(AD-A166887; NRL-MR-5744) Avail: NTIS HC A03/MF A01 CSCL 06M

Studies of the effects of various chemical or physical stimuli on the growth rates of microorganisms generally involve some measure of biomass. In the case of algae, one might measure the cell number, the chlorophyll concentration, the fluorescence, or the wet weight of the culture as a function of time. Each such measurement requires a sampling of the culture which could be a disturbing factor in the system being measured. Another disadvantage of these traditional measurements is that the times required for significant change to take place in the culture might be hours or days; furthermore, growth rate measurements calculated from the data must be based on the assumption that during the time between measurements the growth rate was

constant. This report describes another approach to the problem. It consists simply of monitoring the O2 or CO2 concentration of an air stream passing through the system (the gas exchange method), and it has several distinct advantages: (1) there is no need to take samples of the culture, (2) each measurement is a rate measurement and indicates the performance of the culture at that very moment, and (3) transitory changes in growth rates are readily detected. Examples are given of studies made previously with this method at NRL. Also the possible value of these methods in a study of the corrosion susceptibility of alloys is described.

A highly influential paper by Randic entitled On characterization of molecular branching appeared in the Journal of the American Chemical Society. In this paper a new topological index was introduced which has since become known as the molecular connectivity index. Topological indices (Tis) are graph-theoretical invariants which are employed extensively as matheamtical descriptors for a wide range of molecular species. They have been used mainly for the purpose of correlating the properties of molecular species with their topological structure. The molecular connectivity index was originally put forward with the aim of characterizing the branching in alkane species, but more recently has been shown to have numerous applications in both the physical and biological sciences. In this review we shall focus on the use of the index in the more biologically oriented sciences, such as pharmacology and toxicology. In particular, we shall discuss the prediction of biological activity in chemical species by means of this index. The molecular connectivity index as originally presented by Randic was designed to parallel the ordering obtained for sets of isomeric alkane molecules based on their physicochemical properties.

LASER KINETIC SPECTROSCOPY OF UNIMOLECULAR AND BIMOLECULAR PROCESSES IN THE GAS PHASE Final Report, 1 Oct. 1982 - 30 Sep. 1985
C. WITTIG and H. REISLER 15 Nov. 1985 14 p
(Contract AF-AFOSR-0022-83)
(AD-A166998; AFOSR-86-0226TR) Avail: NTIS HC A02/MF A01 CSCL 07E

This research is concerned with the study of unimolecular processes in the gas phase. We concentrated on simple bond fission reactions, and determined both the collision free unimolecular rates Benzylamine (C6H5CH2NH2), Nitrosomethane (CH3)3CNO), and the energy disposal in the products Nitrosyl cyanide (NCN0), Trifluoronitrile methane (CF3CN), Cyanogeniodide (ICN). Most of the molecules were dissociated either via IRMPD(CF3CN, C6H5CH2NH2) or by electronic excitation followed by radiationless transitions (NCNO(CH3)3CNO). They exhibited statistical behavior, and the results were compared with the predictions of statistical theories. The most detailed experiments involved the photodissociation of NCNO, which provided complete mapping. of product internal states. The CN and NO E,V,R distributions are textbook examples of statistical product state distributions deriving from a unimolecular reaction. In our studies of the direct photodissociation of ICN, we obtained sub-Doppler LIF spectra of nascent CN(X2 sigmat state), following the 266 nm photolysis of 300 K molecules. These studies provided a detailed picture of the fragment recoil spatial anisotropies as well as CN E,V,R, T and and I/I excitations. The CN rotational distributions were dissected into two separate distributions for the channels producing I and I.

THE INVERSE PROBLEM IN ELECTROCARDIOGRAPHY - A MODEL STUDY OF THE EFFECTS OF GEOMETRY AND CONDUCTIVITY PARAMETERS ON THE RECONSTRUCTION OF EPICARDIAL POTENTIALS
B. J. MESSINGER-RAPPORT and Y. RUDY (Case Western Reserve University, Cleveland, OH) IEEE Transactions on Biomedical Engineering (ISSN 0018-9294), vol. BME-33, July 1986, p. 667-676. Research supported by the American Heart Association and North East Ohio Affiliate, Inc. refs
(Contract NIH-HL-33343; NIH-HL-17931; NIH-GM-07250)

An eccentric spherical model is utilized to study the effects of variations in torso geometry and volume conductivity parameters on the accuracy of the recovered epicardial potentials and the orthogonal expansion terms. The solution to the electrocardiographic inverse problem of the eccentric sphere is presented. The ability to distinguish separate local electrical events on the epicardium is examined. The data reveal that changes in the conductivity and geometry parameters influence the amplitude, resolution, and position of the reconstructed epicardial potentials; proper estimations of secondary sources external to the epicardium and geometry parameter are necessary for accurate recovery of epicardial potentials. The application of the homogeneous assumption to inverse-recovered epicardial potentials results in good recovery of anterior epicardial potentials; however, resolution loss for posterior potentials is detected. Deviations in the conductivity of the lungs and skeletal muscle tissue and incorrect estimation of the heart size affect the recovery of the anterior and posterior epicardial potentials.

CIRCADIAN VARIATIONS OF SYSTOLIC TIME INTERVALS
J. TIMBAL, J. COLIN, and H. MAROTTE (Centre d'Etudes et de Recherches de Medecine Aerospatiale, Paris, France) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 642-646. refs

In order to test the reality of a circadian evolution of systolic time intervals, an experiment was conducted on six subjects resting in a supine position for 24 h. Heart rate (HR), systole (S), diastole (D), presystole (PS), isovolumetric contraction time (IVCT), normal and corrected ventricular preejection and ejection time were computed by electric rheoplethysmography every 3 h in supine and sitting positions. Evidence of the existence of a circadian rhythm was clear in supine subjects; especially left preejection period (LPEP) and left ventricular ejection time (LVET) acrophases were, respectively, 4.03 + or - 2.36 h and 4.31 + or - 1.15 h. In sitting subjects, a circadian rhythm was evidenced for IVCT, corrected left ventricular ejection time, and LPEP/LVET, and on the difference of resting-sitting for PS, IVCT, and LPEP, suggesting a decrease in orthostatic tolerance at the end of the night. However, values for characteristics of circadian rhythms (mean, amplitude, phase) strongly depend upon experimental conditions (position, activity, diet). A phase difference between systolic times and HR was also observed. This phenomenon was due to an advance in phase of D relative to S. Finally, all these results show that it is always necessary to take circadian factors into consideration during cardiovascular studies, especially for the preparation of protocols and the interpretation of results.

NALOXONE ENHANCES MOTION SICKNESS - ENDORPHINS IMPLICATED
M. E. ALLEN, C. MCKAY, D. M. EAVES, and D. HAMILTON (Simon Fraser University, Burnaby; Lions Gate Hospital, North Vancouver, Canada) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 647-653. refs

This study evaluated the time course to malaise III in human subjects given naloxone and placebo with a double-blind crossover protocol in the prevention of motion sickness induced by exposure to coriolis stimulation in a rotating chair. During naloxone tests, subjects reached the designated level of sickness sooner than during the placebo testing (significance greater than 0.05) and their discomfort lingered for up to 3 d, a feature not seen with the placebo. This implicates endogenous opiates with an endogenous protective or adaptive role in the control of motion sickness. It is suggested that when subjects experience endogenous opioid withdrawal, such as post exercise, they could be in a state of neuron hypersensitivity, and thus more prone to any form of exogenous emetic stimuli. Greater tolerance to motion stresses could be experienced in subjects whose endorphins were repeatedly elevated, thus avoiding a hypersensitivity state from endogenous opiate withdrawal. Subjects whose endorphins have not been elevated in the first instance cannot secondarily suffer opioid abstinence. Author

SINGLE SINUSOIDS COMPARED WITH A MULTIPLE-SINUSOIDS TECHNIQUE FOR EVALUATING HORIZONTAL SEMICIRCULAR CANAL FUNCTION
J. W. WOLFE, E. J. ENGELKEN, K. W. STEVENS, and J. E. OLSON (USAF, School of Aerospace Medicine, Brooks AFB; USAF, Medical Center, Lackland AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 667-670. refs

The vestibulo-ocular reflex (VOR) of 162 normal subjects was evaluated using two rotational testing procedures. Data from 79 subjects were collected using a set of five single-frequency stimuli (0.01 to 0.16 Hz) and 83 subjects were tested using multifrequency stimuli (0.01 to 0.27 Hz). The use of multifrequency stimuli in place of single frequencies reduced testing time from 75 min to 20 min per subject. The diagnostically useful phase response of the VOR, as estimated by the two tests, were not statistically different. Equivalent phase measures may be obtained within a shorter testing period using the multifrequency procedure. Author

INHIBITORY EFFECTS OF COMBINED AGONIST AND ANTAGONIST MUSCLE VIBRATION ON H-REFLEX IN MAN
B. J. MARTIN (Institut National de Recherche et de Securite pour la Prevention des Accidents du Travail et des Maladies Professionnelles, Vandoeuvre, France), J. P. ROLL, and G. M. GAUTHIER (Aix-Marseille I, Universite, Marseille, France) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 681-687. Research supported by Institut National de Recherche et de Securite pour la Prevention des Accidents du Travail et des Maladies Professionnelles and CNRS. refs

The differential effects of vibration locally applied to gastrocnemius soleus and tibialis anterior muscles separately and to both muscles simultaneously are studied. From the results, it is deduced that combined agonist and antagonist muscle vibration may lead to summative interaction between pre- and postsynaptic inhibition at motoneuronal level. Whole-body vibration is taken to mean a combination of synchronous vibrations applied locally and simultaneously to several muscles. The results also demonstrate that the level of inhibition of the H-reflex resulting from the vibration is directly related to the displacement amplitude of the vibration, regardless of the frequency. THE POSSIBLE INVOLVEMENT OF PGI2 IN THE PEEP-INDUCED CHANGES IN CARDIAC OUTPUT AND BLOOD PRESSURE
W. DURANTE and F. A. SUNAHARA (Toronto, University, Canada) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 688-693. Research supported by the Ontario Heart Foundation and Department of National Defence of Canada. refs

Ventilation with positive end-expiratory pressure (PEEP) is employed in clinical and aviation medicine. The widespread application of PEEP, however, is limited principally because of its adverse effect on cardiac output (CO) and systemic arterial blood pressure (BP). Recently, it has been suggested that this PEEP-induced cardiovascular depression may be mediated by vasoactive agents, possibly prostaglandin in nature. This study examined the possible involvement of PGI2 in the PEEP-induced decreases in CO and BP. Chloralose-anesthetized mechanically ventilated dogs were subjected to brief intervals (75 s) of PEEP 10 or 20 mm Hg. Arterial levels of 6-keto-PGF1a (stable metabolite of PGI2) were monitored by radioimmunoassay. These parameters were compared before and during PEEP application. During PEEP, tracheal pressure-related decreases in both CO and BP were noted. Application of either PEEP 10 or 20 mm Hg resulted in an increase in circulating 6-keto-PGF1a levels in three animals while a decrease was noted in two others. Overall, application of PEEP did not result in a significant change from baseline levels. Furthermore, there was no correlation between changes in either CO or BP with changes in arterial 6-keto-PGF1a levels. These results do not support the hypothesis that the short term PEEP-induced changes in CO or BP are mediated by endogenously released PGI2. Author

LOW BACK PAIN IN PILOTS
P. FROOM, J. BARZILAY, Y. CAINE, S. MARGALIOT, D. FORECAST (Israel Air Force, Aeromedical Center, Ramat Gan) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 694, 695. refs

A questionnaire on low back pain (LBP) was administered to 373 fighter pilots, 165 transport pilots, and 264 helicopter pilots. Helicopter pilots had more pain during flight than did fighter or transport pilots (34.5, 12.9, and 5.1 percent, respectively). A history of LBP temporally unassociated with flight was found in 26.5 percent of helicopter pilots, 31.5 percent of transport pilots, and 25.2 percent of fighter pilots. It is concluded that, despite the pain experienced by helicopter pilots in flight, they are not at increased risk for LBP unassociated with flight. Author

THE SIGNIFICANCE OF RECURRENT CHILDHOOD RESPIRATORY DISORDERS IN FLIGHT TRAINING APPLICANTS
M. FELDMAN, P. FROOM, Y. CAINE, S. MARGALIOT, and J. BENBASSAT (Israel Air Force, Aeromedical Center, Ramat Gan; Hadassah University Hospital, Jerusalem) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 706-708. refs

A random sample of 1700 18-year-old applicants for flight training, who had been free from respiratory symptoms for one year or more was screened for respiratory symptoms in the past. Those who denied such a history had a questionnaire sent to their parents for further verification. Altogether 70 subjects with a past history of 'wheezing', 'asthma', or 'spastic bronchitis' were thus identified. Abnormalities in either FEV1/FVC, Vmax50 or Vmax75 were found in 40 percent of the subjects with a history of childhood 'wheezing', 'asthma', or 'spastic bronchitis', but only

in 8 percent of controls without such a history. A history of wheezing had no effect on the residual volume/total lung capacity ratio. The age at which the last bout had occurred had no apparent effect on the degree of flow abnormalities. The most sensitive index for a flow abnormality was Vmax50, which was less than 74 percent of the predicted values in 2/(30 percent) of the 70 subjects tested. It is concluded that, in subjects with a history of 'wheezing', 'asthma', or 'spastic bronchitis', flow abnormalities may persist even after prolonged remissions. Author

PHYSICAL TRAINING AND +GZ TOLERANCE REEVALUATED
R. BULBULIAN (Kansas State University of Agriculture and Applied Science, Manhattan) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 709-711. refs

The effect of physical training on +Gz tolerance is of vital interest in the aerospace community. The data on the effect of physical training on orthostatic tolerance or simulated air combat maneuvers is equivocal. The effects of aerobic and strength training programs is briefly reviewed. The data suggest a need for careful reinterpretation of research results in light of conflicting reports and methodological shortcomings. Aerobic training cannot be assumed to always be detrimental nor can strength training be assumed to be universally effective in improving +Gz tolerance. In selecting appropriate screening criteria and training regimens for aircraft personnel, it seems prudent to reinvestigate strength and endurance training effects on +Gz tolerance using multivariate research paradigms. Special attention should be directed to commonly accepted physiological principles which may vary under conditions of altered gravitation. Author

EFFECT OF HEAD-OUT WATER IMMERSION ON RESPONSE TO EXERCISE TRAINING
L. M. SHELDAHL, F. E. TRISTANI, P. S. CLIFFORD, J. H. KALBFLEISCH, and G. SMITS (USVA, Cardiopulmonary Rehabilitation Center, Wisconsin, University, Milwaukee) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, June 1986, p. 1878-1881. Research supported by the Wisconsin Heart Association. refs
(Contract USVA-7876-01P)

During spaceflight and head-out water immersion (WI) there is a cephalad shift in blood volume. It has recently been shown that left ventricular end-diastolic dimension is significantly greater during moderate cycling exercise with WI compared with on land. The purpose of this study was to determine whether the cephalad shift in blood volume and accompanying increase in cardiac preload with WI alters the normal cardiovascular adaptations to aerobic exercise training. Nine middle-aged healthy men trained on cycle ergometers in water, nine trained on land, and four served as controls for 12 wk. Following training, both training groups showed similar increases (P less than 0.05) in stroke volume and similar decreases in heart rate (P less than 0.01) and blood pressure (P less than 0.05) at a given submaximal exercise O2 consumption. Maximal O2 consumption increased (P less than 0.01) similarly for both training groups. The control group did not demonstrate any significant changes in submaximal or maximal exercise responses. It is concluded that the cephalad shift in blood volume with WI does not alter the normal cardiovascular adaptation to aerobic exercise training. Author

HUMAN FACTORS PROBLEMS IN THE TACTICAL AIR COMMAND
R. M. DEHART (USAF, Tactical Air Command, Langley AFB, VA) SAFE Journal, vol. 16, no. 2, Summer 1986, p. 18-20.

The increase in human-factor (HF) variable mishaps to 60-70 percent of the USAF aircraft mishaps in 1984 and 1985 is discussed. The most important HF problems are accelerative force problems, particularly spatial disorientation (SD) and high-G loss of consciousness. SD mishaps account for 30 percent of the F-16 HF mishaps and 19 percent of the F-15 and F-4 HF mishaps. Current medical screening policies to minimize high-G mishaps include coronary artery risk evaluations and hyperlipemia selection standards. High-G fighter pilot training is also being implemented. INFLIGHT LOSS OF CONSCIOUSNESS - A FIRST LOOK AT THE U.S. NAVY EXPERIENCE
D. C. JOHANSON (U.S. Navy, Naval Weapons Center, China Lake, CA), H. T. PHEENY (U.S. Navy, Naval Air Systems Command, Washington, DC), J. F. PALMER (U.S. Navy, Pacific Missile Test Center, Point Mugu, CA), and R. A. MATTHEWS (U.S. Navy, Naval Hospital, Rota, Spain) SAFE Journal, vol. 16, no. 2, Summer 1986, p. 30-35. Navy-sponsored research.

This paper represents the first public release of a recent NAVAIR-sponsored survey studying the incidence of in-flight acceleration (g) induced loss of consciousness (GLOC) in the United States Navy. The survey provides some valuable information on aviator attitudes, practices, and performance, in addition to suggesting the requirement for a follow-up study. The survey indicated a 12 percent incidence of GLOC within the Navy, which is in agreement with the findings of the Air Force study of two years previous which also indicated a rate of 12 percent for that service. The primary goal of this survey was to determine the relative incidence of GLOC. However, in the process, the survey examined a number of items of potential interest to the life support systems designer which may prove beneficial to future designs. In addition to discussing the primary goal, this report looks at several areas of potential interest with respect to the life support aspects of the flight environment. Author

G-INDUCED LOSS OF CONSCIOUSNESS - COMBAT AIRCRAFT PILOTS HEAD FOR TROUBLE
G. CHAMBOST and P. TURK Interavia (ISSN 0020-5168), vol. 41, May 1986, p. 507, 508.

The problem is examined of modern combat aircraft being able to sustain G forces greater than their pilots can tolerate and remain conscious. Between 1983 and 1984, the U.S. Air Force officially acknowledged nine accidents in which loss of consciousness under high G loads was deemed to have been the primary cause. An aircraft such as the F-16 or Mirage 2000 can not only maintain loads of 9G for several tens of seconds but can also reach these high values in only a few seconds; the body has no time to organize its automatic defense mechanisms such as accelerated heart rate and increased blood pressure. Studies at the Air Force School of Aerospace Medicine indicate that the ability of the cardiovascular system to maintain correct irrigation of the brain is inversely proportional to the rate of onset of G forces; this is why the problem is so serious in high performance combat aircraft. Techniques for dealing with the problem (inclined crew seats, G suits) are considered. The G-LOC (G-induced loss-of-consciousness) problem has been shrouded in mystery in part because of a knowledge of how far one has pushed back the limits of G tolerance is of great interest to an adversary. D.H.

FLUID DYNAMIC STUDY IN A FEMORAL ARTERY BRANCH CASTING OF MAN WITH UPSTREAM MAIN LUMEN CURVATURE FOR STEADY FLOW
Y. I. CHO, L. H. BACK (California Institute of Technology, Jet Propulsion Laboratory, Pasadena), and M. R. BACK ASME, Transactions, Journal of Biomechanical Engineering, vol. 107, Aug. 1985, p. 240-248. NASA-supported research. refs
(Contract NIH-HL-23619-05)

An in-vitro, steady flow investigation was conducted in a hollow, transparent vascular replica of the profunda femoris branch of man for a range of physiological flow conditions. The replica casting tested was obtained from a human cadaver and indicated some plague formation along the main lumen and branch. The flow visualization observations and measured pressure distributions indicated the highly three-dimensional flow characteristics with arterial curvature and branching, and the important role of centrifugal effects in fluid transport mechanisms. THE EFFECT OF HIGH TEMPERATURE ON THE HEAT EXCHANGE AND THE NUTRITIONAL STATUS OF PILOTS [VLIIANIE VYSOKOI TEMPERATURY NA TEPLOOBMEN I SOSTOIANIE PITANIIA U LETCHIKOV]
A. N. AZHAEV, V. E. POTKIN, P. A. LOZINSKII, and V. A. EFIMOV Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), April 1986, p. 39-41. In Russian. refs

Changes in body mass, pulse rate, oral and average skin temperatures, urine volume, and mineral excretion were studied in pilots after flights from moderate climatic zones into zones with higher (by 15 to 20 C) temperatures. In addition, caloric and liquid intakes of the subjects were correlated with their objective evaluation of appetite and thirst, efficiency, and the state of well being. Compared with psychophysiological changes registered in the same pilots after flights within moderate climatic zones, flights into a hotter zone were accompanied by large increases of pulse rate and by other unfavorable changes of the analyzed psychophysiological indices. It is recommended that pilots designated for flights from a moderate into a hot temperature zone be screened on the basis of clinical and physiological tests, and that prophylactic measures be taken against dehydration and overheating of the organism before, during, and after the flight. I.S.

RADIOFREQUENCIES AND MICROWAVES - RADIATION SAFETY OF THE OPERATOR [RADIOIZLUCHENIIA I MIKROVOLNY - RADIATSIONNAIA BEZOPASNOST' OPERATORA]
B. I. DAVYDOV Kosmicheskie Issledovaniia (ISSN 0023-4206), vol. 24, May-June 1986, p. 459-465. In Russian. refs

The radiofrequency and microwave radiation safety standards existing in the USSR, Poland, Czechoslovakia, USA, Canada, Great Britain, and West Germany are examined along with the proposals of the IRPA/INIRC. It is noted that the dosimetric principle provides best results in evaluating biological effects but is associated with certain difficulties in interpretation; therefore the use of the effective dose as a criterion of biological effects is preferable. Some organizational aspects of radiation safety are discussed. V.L.

AN UPDATED MODEL FOR A SPACE STATION HEALTH MAINTENANCE FACILITY
W. T. HARVEY, S. M. FARRELL, A. J. HOWARD, and F. C. PEARLMAN (Lockheed Missiles and Space Co., Inc., Sunnyvale, CA) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 7 p.
(AIAA PAPER 86-2303)

The Space Station Health Maintenance Facility (HMF) is required to provide 'critical care' capability for one crew-nember for 28 days. The HMF must also provide routine monitoring and care for the Space Station crew for the duration of the mission. The equipment necessary to meet these requirements has been defined and an estimate of the physical characteristics of each piece of equipment has been completed. The equipment has been integrated into two Space Station standard outfitting packages, one which contains the laboratory and data management equipment and one which holds the critical care equipment and X-ray reader. The front panel configuration has been designed for optimum crew interface. The total system weight, volume and power requirements have been estimated at 1500 lbs, 140 cubic feet, and 0.5/2 kilowatts (routine/ critical care). The HMF Medical Data Management System hardware and architecture has been designed to complement the Space Station Data Management System. Author

THE TEMPORAL RESPONSE OF BONE TO UNLOADING
R. K. GLOBUS, D. D. BIKLE (California Univ., San Francisco.), and E. MOREY-HOLTON 19 Dec. 1984 34 p Prepared in cooperation with Veterans Administration Hospital, San Francisco, Calif.
(Contract NAGW-236)
(NASA-TM-89228; NAS 1.15:89228) Avail: NTIS HC A03/MF A01 CSCL 06P

Rats were suspended by their tails with the forelimbs bearing the weight load to simulate the weightlessness of space flight. Growth in bone mass ceased by 1 week in the hindlimbs and lumbar vertebrae in growing rats, while growth in the forelimbs and cervical vertebrae remained unaffected. The effects of selective skeletal unloading on bone formation during 2 weeks of suspension was investigated using radio iostope incorporation (with Ca-45 and H-3 proline) and histomorphometry (with tetracycline labeling). The results of these studies were confirmed by histomorphometric measurements of bone formation using triple tetracycline labeling. This model of simulated weightlessness results in an initial inhibition of bone formation in the unloaded bones. This temporary cessation of bone formation is followed in the accretion of bone mass, which then resumes at a normal rate by 14 days, despite continued skeletal unloading. This cycle of inhibition and resumption of bone formation has profound implication for understanding bone dynamics durng space flight, immobilization, or bed rest and offers an opportunity to study the hormonal and mechanical factors that regulate bone formation. THERMOREGULATION AFTER ATROPINE AND PRALIDOXIME ADMINISTRATION
M. A. KOLKA, L. A. STEPHENSON, S. P. BRUTTIG, B. S. CADARETTE, and R. R. GONZALEZ Mar. 1986 19 p
(AD-A165868) Avail: NTIS HC A02/MF A01 CSCL 06O

The effects of intramuscular saline (control), atropine (2mg), pralidoxime (600 mg) or a combination of the two drugs on heat exchange was evaluated in four healthy males during moderately intense seated, cycle exercise (55% v02 peak) in a temperate environment (T sub a = 30.3 C, P sub W = 1.0 kPa). Esophageal, rectal, and mean skin temperatures, and chest and forearm sweating were continuously measured. Skin blood flow (FBF) from the forearm was measured twice each minute by venous occulusion plethysmography. Whole body sweating was calculated from weight changes. The expected result of atropine injection, decreased eccrine sweating (-60%, P 0.05) with ensuent elevated esophageal (+0.4C, $P<0.05$) and skin temperature (+2.1C, $P<0.05$) was observed relative to control. Heart rate (+28 b/min) and FBF (+9 ml/100cc) were higher after atropine. Pralidoxime, in general, did not affect the core and skin temperature responses to the exercise differently from control; however, a slightly elevated FBF (+3ml/100cc min, 33%) compensated for the reduction in whole body sweating (-45%, $p<0.05$) that we observed. The combination of the drugs resulted in significantly higher esophageal (0.4C) and skin (0.9C) temperatures than atropine alone, as has been previously shown. The thermoregulatory disadvamtage of inhibited sweating by atropine was partially compensated for by enhanced

skin blood flow in this environment where T sub a>T sub sk. Pralidoxime was shown to decrease whole body sweating, by a mechanism as yet unexplained. GRA

HUMAN VASCULAR FLUID RESPONSES TO COLD STRESS ARE NOT ALTERED BY COLD ACCLIMATION
A. J. YOUNG, S. R. MUZA, M. N. SAWKA, and K. B. PANDOLF Mar. 1986 26 p
(AD-A165869; USARIEM-M-19/86) Avail: NTIS HC A03/MF A01 CSCL 06S

Repeated cold water immersion can induce the development of an insulative type of cold acclimation in man. This investigation determined if repeated cold water immersion produced changes in vascular fluid response to cold stress in addition to the previously reported changes in thermoregulation. Seven male subjects performed a standardized cold air and cold water exposure before and again after a cold acclimation program. The cold acclimation program consisted of daily immersion (90 min) in cold water (18 C, stirred) repeated five times per week for five consecutive weeks. Cold acclimation did not alter the responses of plasma volume or electrolyte concentrations, nor urinary flow or electrolyte excretion during either cold air or cold water exposure. The percent reduction in plasma volume was larger ($P<0.01$) in cold water (-17%) than in cold air (-12%). Cold water immersion resulted in greater ($P<0.01$) diuresis than cold air exposure. Plasma K(+) concentration increased ($P<0.01$) during cold (both air and water) exposure while plasma Na(+) concentration was unchanged. Calculated renal clearance and urinary excretion rate of both Na(+) and K(+) increased during cold (both air and water) exposure. It is concluded that: (1)insulative cold acclimation does not influence vascular fluid responses to cold stress; and (2)although vascular fluid shifts, body cooling and diuresis are all greater in cold water than air, a consistent relationship among these parameters could not be established for an individual's response. GRA

CALCIUM AND VITAMIN D METABOLISM IN SUBMARINERS: CARBON DIOXIDE, SUNLIGHT AND ABSORPTION CONSIDERATIONS
D. M. SACK, M. HOLICK, and K. R. BONDI 15 Jan. 1986 25 p
(AD-A166292; NSMRL-1037) Avail: NTIS HC A02/MF A01 CSCL 06P

A 42% decrease in 25(OH)vitamin D levels has been noted in subjects over the course of submarine patrols and is thought to be the result of prolonged sunlight deprivation. The influence of the submarine environment on absorption of ingested vitamin D has not been previously investigated. This study examines the vitamin D absorption patterns of 5 subjects at the beginning, middle, and end of a 69 day patrol on a normal diet and with no exposure to sunlight. It was found that the magnitude and pattern of absorption does not change appreciably. It is concluded that the absorption of vitamin D is not affected by the submarine environment and that any drop in 25(OH) vitamin D levels seen during patrol is caused by lack of sunlight, ultraviolet light in particular. Implications in terms of sunlight deprivation and calcium metabolism are discussed in a historical review of calcium and vitamin D investigations on submarines. GRA

AN ENVIRONMENTALLY-CONTROLLED EXTENDED-USE SMALL ANIMAL HYPOBARIC CHAMBER
J. A. DEVINE and A. CYMERMAN Apr. 1986 14 p
(AD-A166729; USARIEM-M-23/86) Avail: NTIS HC A02/MF A01 CSCL 06S

An environmentally-controlled extended-use small animal hypobaric chamber has been designed to study small laboratory animals at low barometric pressures for long periods of exposure. The rectangular chamber (91.4 x 71.1 x 50.8 cm) is constructed of aluminum plate and acrylic resin with a volume of 330,000 cc. A computer/data acquisition control unit provides for controlling and collecting data on pressure, temperature, and relative humidity (RH) for sustained operations. Altitude simulation is achieved using a two-stage, air-cooled vacuum pump with a displacement of 30 cc/min. The pressure within the chamber is controlled by an incremental throttling valve in the vacuum line. Temperature (0-100 C) is accomplished by using a remote-controlled constant temperature circulating bath. RH (20-80%) is regulated by pre-conditioning the ventilation purge air prior to entering the chamber. Acceptable levels of oxygen and carbon dioxide gases are maintained by purging with sufficient volumes of fresh air. GRA

MULTIPARAMETER DATA ACQUISITION SYSTEMS FOR STUDIES OF CIRCADIAN RHYTHMS
K. R. GROH, C. F. EHRET, W. J. EISLER, JR., and D. A. LEBUIS 1985 15 p Presented at the NATO Advanced Workshop on Chronobiotechnology, Cardiff, Wales, 21 Apr. 1985
(Contract W-31-109-ENG-38)
(DE86-004041; CONF-8504206-1) Avail: NTIS HC A02/MF A01

Long-term, simultaneous monitoring of multiple metabolic circadian cycles such as energy metabolism, animal activity, and body temperature together have revealed ultradian fine-structure rhythms which are dependent on circadian phase and the perturbations of environmental influences. Because of the variation between individual animals, these experiments need to have large sample sizes for each experimental condition. To this end we have designed, constructed, and used four microcomputer controlled data acquisition systems to collect circadian data from individually housed rats and mice. DOE

MEDICAL SELECTION AND PHYSIOLOGICAL TRAINING OF FUTURE FIGHTER AIRCREW
Loughton, England Dec. 1985 146 p refs In ENGLISH and FRENCH Conference held in Athens, Greece, 25-26 Apr. 1985
(AGARD-CP-396; ISBN-92-835-0385-6) Avail: NTIS H A07/MF A01

The conference proceedings reviewed and made recommendations with respect to the medical selection and physiological and physical training of pilots who are to operate future fighter aircraft. The relevant characteristics of a proposed USAF fighter and the European Fighter Aircraft were discussed and used as the basis for selection and training considerations. Contributors drew upon the experience of the medical selection of pilots for present fighter aircraft. The cardiovascular, vision, and vertebral column aspects of medical selection and monitoring are considered in depth and recommendations made as to the methods which should be employed in the future. The influence of physical fitness upon pilot performance is addressed. The philosophy and practice of physiological training of aircrews is reviewed with emphasis on the value of the human centrifuge in teaching G protective maneuvers.

AIRCREW ASPECTS OF UNITED STATED FUTURE FIGHTER AIRCRAFT
R. D. KROBUSEK *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 5 p Dec. 1985
Avail: NTIS HC A07/MF A01

The cockpit environment of fighter aircraft for the year 2000 and beyond will undoubtedly need aircraft technologies and protective devices to meet the ever growing enemy challenge. Recent advances in aircraft structures, flight controls, sensors, multipurpose and touch-sensitive displays, voice recognition and synthesis, enemy defenses, and chemical/biological warfare (CBW) technologies will combine to create a cockpit environment for future fighter aircraft vastly different and potentially more complex than any previously encountered by aircrews. This integration of

equipment and crewmembers will interact such that new stresses will be created and existing ones aggravated. Special maneuver capability through the use of direct side force may provide significant tactical advantage at the expense of stress due to lateral acceleration forces. A few of these current technoloies and some of the driving forces which will affect the cockpit environment of tomorrow's aircraft will be identified and discussed briefly. These technologies, as well as others, should receive further study for their effects on the aircrew prior to application in future aircraft. Proper application of the results of these studies will prevent the unbridled growth of cockpit complexity. Author

CANADIAN FORCES APPROACH TO AIRCREW MEDICAL SELECTION
G. GRAY *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 6 p Dec. 1985
Avail: NTIS HC A07/MF A01

With advances in aircraft performance capabilities and in medical screening technology, major changes in Canadian Forces aircrew medical screening procedures were proposed and are being introduced. In addition to the standard battery of tests, additional screening procedures being introduced or evaluated include drug screening for cannabinoids, contrast sensitivity function visual assessment, echocardiograms, cardiovascular risk assessment, pulmonary function testing, an aeromedical history questionnaire, and a psychosocial and clinical review by a flight surgeon. Screening electroencephalograms are being continued. This data is used to reject candidates who fail to meet slection standards, and to provide a Medical Suitabiliyt Rating for acceptable candidates. Of candidates screened 2.8% had positive tests for urinary cannabinoids. Contrast sensitivity norms for the aircrew candidate population are higher than for other populations studied. Contrast sensitivity may be helpful in assessing candidates whose vision is close to standards. This approach to initial medical screening should reduce attrition of experienced aircrew for medical reasons, and will enhance flight safety over the years to come.

MEDICAL SELECTION AND PHYSIOLOGICAL TRAINING OF FIGHTER PILOTS: A 1985 PERSPECTIVE AND OVERVIEW
R. M. DEHART *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 5 p Dec. 1985
Avail: NTIS HC A07/MF A01

From an aeromedical perspective, there are two major goals for the Tactical Air Force. The first is to reduce the aircraft mishap rate due to human factor variables. The second is to enchance pilot capability to perform in the modern fighter environment. Fighter pilots can perform in the 9G (sub z) environment effectively and safely if they are properly selected, educated, and trained. In addition to being good aviators, smart, and aggressive, fighter pilots must be physically healthy and in excellent physical condition. A thorough understanding of high-G physiology and the personal physiological flight envelope is needed. Accomplishing the variety of initiatives required to realize these goals is an exciting challenge for the aerospace medical community. Author

CARDIOVASCULAR STANDARDS FOR SELECTION AND RETENTION OF HIGH PERFORMANCE PILOTS IN THE USAF: PERSPECTIVES FOR THE NEXT DECADE
J. R. HICKMAN, JR., G. M. MCGRANAHAN, JR., R. M. PAULL, and R. M. DEHART (Tactical Air Command, Langley AFB, Va.) *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 7 p Dec. 1985
Avail: NTIS HC A07/MF A01

Cardiovascular selection and retention standard must be based upon a number of considerations which are primarily epidemiological in nature. In young applicants, there is little rationale in the performance of expensive, labor intensive studies which yield nonspecific results, most of which are normal variants. Stress tests and Holter monitors fall into this category. Since the significance of nonspecific findings is determined by the presence or absence of underlying organic structural defects, it is recommended that testing in a young population be directed toward the detection of anatomical defects. It is also recommended that abnormal findings of a structural nature then be assessed with functional tests to determine whether the applicant may enter some form of aviation training or be disqualified from all training. SELECTION AND MEDICAL TESTING OF MIRAGE 2000 PILOTS: REPORT OF ECHOCARDIOGRAPHY [SELECTION ET SURVEILLANCE MEDICALES DES PILOTES DE MIRAGE 2000: APPORT DE L'ECHOCARDIOGRAPHIE]
H. ILLE, A. DIDIER, N. ALLEGRINI, and C. MAUREL *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 13 p Dec. 1985 In FRENCH
Avail: NTIS HC A07/MF A01

The use of echocardiological examinations in the selection of prospective combat aircraft crews is discussed. Included is a comparative study of two homogeneous pilot cohorts; one consists of 34 transport aircraft pilots, and the other consists of 32 combat pilots. It is shown that the two cohorts present the same anomalies of the right cardiac region (mitral valvular prolapsus). However, it is shown that the anomalies of the right cardiac region form a right ventricular dilation only in combat pilots. Two hypotheses were developed: that the anomalies are an adaptation of the right cardiac region to accelerations, or that they are a stage preceeding secondary myocardial shock due to aeronautical constraints.

CONTINUOUS ECG MONITORING OF MIRAGE 2000 PILOTS (COMPARISON WITH MIRAGE 3 AND F1 PILOTS) [ENRIGISTREMENT CONTINU DE L'E.C.G. CHEZ LES PILOTES DE MIRAGE 2000 (COMPARAISON AVEC LES PILOTES DE MIRAGE 3 ET F1)]
A. SEIGNEURIC, G. LEGUAY, J. P. BURLATON, G. POYOT, and M. SYLVESTRE *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 3 p Dec. 1985 In FRENCH
Avail: NTIS HC A07/MF A01

Continuous Electrocardiographic monitoring for a duration of 24 hours allows a comparison of a sample of 24 conventional combat aircraft pilots (Mirage III and FI), with 7 Mirage 2000 pilots. A comparison of problems due to excitability during flight does not show signification differences among the two groups. Problems due to solar repolarization were recorded only for high-performance aircraft pilots. Differences primarily included cardiac frequencies in flight; they were clearly lower for the Mirage 2000 pilots as observed acceleration was increased. This corresponds with the differences in characteristics of the two populations, pertaining to the different missions. It is shown that modern combat aircraft, characterized by intense and prolonged acceleration, are capable of causing a certain excitability factor for the pilots. It is important to determine the influence of this acceleration on the cardiovascular system. B.G.

THE USE OF ECG CHANGES CAUSED BY ACCELERATION AS TOLERANCE PREDICITION FACTORS [LES MODIFICATIONS ELECTROCARDIOGRAPHIQUES INDUITES PAR LES ACCELERATIONS, FACTEUR PREDICTIF DE LA TOLERANCE]
J. H. CLERE, H. VIELLEFORD, and J. L. POIRIER *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 7 p Dec. 1985 In FRENCH
Avail: NTIS HC A07/MF A01

High-G accelerations experienced by combat aircraft pilots are arythmogenic. Of 328 electrocardiographic (EKG) tests done on

146 subjects submitting to accelerations of 4 to 11 G at a duration of 20 to 60 seconds, 215 supraventricular anomalies were observed on 181 tests, and 37 ventricular anomalies were observed on 31 tests. The frequency of these anomalies are a function of the intensity of the acceleration. However, there appeared to be no correlation between the EKG anomalies and the hemodynamic phenomena caused by problems of visual function or psychomotor problems. Thus it is stated that EKG monitoring may be of interest for use as a prediction factor for acceleration tolerance. It is stated that the anomalies of rhythm are probably based on vagus reflexes caused by attempts by the heart to protect against the acceleration, as well as by the venous responses to the centrifuge. ENTRY VISUAL STANDARDS AND OCULAR EXAMINATION TECHNIQUES FOR FUTURE FIGHTER AIRCREW

D. H. BRENNAN *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 6 p Dec. 1985

Avail: NTIS HC A07/MF A01

The visual tasks of future fighter aircrew are likely to increase both in magnitude and complexity. The increasing adoption of devices for visual enhancement and protection, even now, poses problems for integration with spectacles. The visual standards required for initial selection for training as a pilot or navigator should, if numbers permit, be such that trained aircrew are unlikely to require a visual aid until presbyopia physiologically demands correction in the latter half of the fourth decade. The visual standards considered appropriate for future fighter aircrew and the related ocular examination techniques both conventional and those designed to test such specialized ocular functions as stereopsis, glare resistance, dark adaptation, hue discrimination, and modulation transfer function are discussed. SENSITIVITY TO COLOR CONTRASTS AND THE SELECTION OF NAVIGATOR PERSONNEL [SENSIBILITE AU CONTRASTE EN COULEURS ET SELECTION DU PERSONNEL NAVIGANT]

J. P. MENU, G. SANTUCCI, and C. CORBE *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 8 p Dec. 1985 In FRENCH

Avail: NTIS HC A07/MF A01

Using a specific psychophysical method, the sensitivity to color contrasts (FSC) was systematically tested for subjects undergoing ophthalmological examinations. Following FSC examinations, several subjects with ametrophic conditions were studied. The FSC examinations were modified to obtain the exact nature of the ophthalmological l problem. It is shown that there is a change in the spatial frequencies of the blue section for subjects with myopic disorders, and a change in the red section for far-sighted subjects. This change is shown to be proportional to the degree of ametrophic disorder. Thus, FSC tests are proposed as a basis for tests for the selection of navigators. B.G.

COMPUTER ANALYSIS OF VISUAL AND VESTIBULAR OCULOMOTOR FUNCTION IN THE MEDICAL SELECTION OF FIGHTER AIRCREW MEMBERS

J. W. WOLFE, E. J. ENGELKEN, and K. STEVENS, W. *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 6 p Dec. 1985

Avail: NTIS HC A07/MF A01

Methods for evaluating visual and vestibular-oculomotor function in aircrew members are reviewed. Three specific tests are described: pursuit tracking, harmonic angular acceleration, and saccadic tracking. In all of these tests, on-line computer analysis is used to quantify and describe the input/output relationships. An example of clinical data from pursuit tracking and harmonic angular acceleration tests for a patient with known pathology are used to demonstrate changes in test results. The major point is that it is now practical to evaluate oculomotor function in pilots and aircrew members selected for fighter aircraft duty. Author

VISUAL CAPABILITIES RELATED TO FIGHTER AIRCREW PERFORMANCE IN THE F-14 AND ADVERSARY AIRCRAFT

W. A. MONACO and P. V. HAMILTON *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 9 p Dec. 1985

Avail: NTIS HC A07/MF A01

Standards for aviation personnel should be based on capacities for performing critical tasks. The use of scores on task-relevant visual tests to predict air-to-air target detection performance of pilots involved in air combat maneuver (ACM) training was determined. A series of automated vision tests was determined in a mobile field laboratory located at a Tactical Air Combat Training System (TACTS) range. A computerized telemetry network provides extensive real time data on observer and target aircraft flight dynamics, and environmental parameters. A pilot's performance on each ACM engagement was measured by the slant range at the instant he sighted a target aircraft. Priminary analyses show that about 30% of the variance in the slant range is accounted for by flight dynamics, and environmental parameter, and vision data. Author

VISION TEST BATTERY THRESHOLD AND RESPONSE TIME AS PREDICTORS OF AIR-TO-AIR VISUAL TARGET ACQUISITION IN F-14 AND ADVERSARY AIRCRAFT

A. MORRIS, P. V. HAMILTON, W. A. MOREY, and R. P. BRIGGS (University of Southern California, Los Angeles.) *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 8 p Dec. 1985

Avail: NTIS HC A07/MF A01

The Naval Aerospace Medical Research Laboratory (NAMRL) Vision Test Battery provides assessment of various visual functions, including spot detection, acuity at high and low contrast, glare sensitivity, and accommodative flexibility. Within these tests are measures of threshol, threshold-stressed response time (for near-threshold stimuli), and unconfounded response time (for supra-threshold stimuli). The contribution of response time variables to predicting flight performance was evaluated for 73 fighter pilots. Vision test data were compared to performance in air combat maneuver training. The distance (slant range) between the observer and target aircraft at time of initial visual detection was used as the performance variable. Availability of response time variables enhanced the ability to predict the air-to-air visual target detection performance of these pilots. Four vision variables accounted for about 32% of the variance in performance of those pilots who detected target aircraft. at slant ranges greater than the group average. Prediction of performance is improved by incorporating other vision data and additional refinement of the performance measure. Author

THE VERTEBRAL COLUMN: SELECTION AND APTITUDE OF COMBAT AIRCRAFT PILOTS OF THE FUTURE [COLONNE VERTEBRALE: SELECTION ET APTITUDE DES PILOTES D'AVION DE COMBAT DU FUTUR]

P. J. METGES, J. FLAGEAT, R. AUFRET, R. P. DELAHAYE, and H. VIEILLEFOND *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 3 p Dec. 1985 In FRENCH

Avail: NTIS HC A07/MF A01

The new generation of combat aircraft is characterized by the possibility of negative effects on the vertebral column due to extended or peak acceleration forces. In order to provide the pilot with optimal capacity for visual information assimilation, the cervical rachis must remain mobile and is therfore vulnerable under certain circumstances. Lesions may occur in this area during flight. Prevention of this condition is based on three elements: extensive

radiological examination of the rachis for pilot applicants; technical improvements in helmet alignment; and physical adaptation training. B.G.

SYSTEMATIC RADIOGRAPHIC EXAMINATION OF THE SPINE FOR SELECTION OF F-16 PILOTS: A PRELIMINARY REPORT
A. VANDALEN and H. H. M. VANDENBIGGELAAR (Royal Netherlands Air Force, Soesterberg.) *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 4 p Dec. 1985
Avail: NTIS HC A07/MF A01

With the introduction of the high performance aircraft F-16 in the Royal Netherlands Air Force an increase in spinal column disorders was anticipated. Therefore, a systematic whole spine radiography of candidate student pilots (CSPs) and qualified pilots (QPs) designated to fly F-16 were performed since December 1982. To reduce radiation exposure radiographs were made using a modern 14 inch intensifier. So far, 225 CSPs and 196 QPs were examined. Strict application of the medical criteria leads to a rejection of 20% of the CSPs because of spinal disorders visualized on X-ray. For F-16 pilots, the major region of interest seems to be the cervical spine. The rejection rate could be reduced by readjustment of the medical criteria and separate selection of helicopter and fighter pilots. Systematic examination of QPs who had no or incomplete previous examinations uncovers a high rate of spinal disorders. In the series QPs without any symptoms were only rejected because of cervical discopathy with osteophyte formation on the backside of the vertebrae and resulting narrowing of the spinal canal. PHYSICAL TRAINING OF MIRAGE 2000 PILOTS [ENTRAINEMENT PHYSIQUE DES PILOTES DE MIRAGE 2000]
G. POYOT, J. M. CLERE, J. LEMOT, and J. P. DELATTRE *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 5 p Dec. 1985 In FRENCH
Avail: NTIS HC A07/MF A01

Nine combat aircraft pilots underwent physical training specifically designed to increase their tolerance to acceleration forces. The suitability of the training was studied using centrifuge tests. The increase in tolerance could be attributed to the effects of the physical training or to an adaptation to the centrifuge. It is shown that together with an excellent original physical condition, specific physical training may increase the tolerance of acceleration forces. Further testing of this is expected. B.G.

TREADMILL SPIROERGOMETRY IN THE SELECTION AND SCREENING OF HIGH-PERFORMANCE COMBAT AIRCRAFT PILOTS IN THE BELIGAN AIR FORCE [SPIROERGOMETRIE SUR TAPIS ROULANT DANS LA SELECTION ET LA SURVEILLANCE DES PILOTES D'AVIONS A HAUTES PERFORMANCES DE LA FORCE AERIENNE BELGE]
G. PIRQUIN, J. VASTESAEGER, and P. VANDENBOSCH *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 5 p Dec. 1985 In FRENCH
Avail: NTIS HC A07/MF A01

All pilots of the Belgian Air Force who were designated for conversion to the F-16 aircraft underwent cardiovascular and respiratory examinations. One of the tests was a test for maximum treadmill effort. In the first study, the results of the screening were combined with the results of tests conducted on a group of young candidate student pilots. The aerobic capacity of this population was then evaluated. The test sample included 156 persons of various ages and in different stages of physical conditioning. In the second study, the positive effects of physical training on the treadmill spiroergometric examination of a group of F-16 pilots were examined. B.G.

RELATIONSHIP OF CARDIOPULMONARY FITNESS TO FLIGHT PERFORMANCE IN TACTICAL AVIATION
G. R. BANTA and J. D. GRISSETT *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 11 p Dec. 1985
Avail: NTIS HC A07/MF A01

Current endeavors to identify whether cardiopulmonary fitness can positively influence flight performance in a tactical fighter community are discussed. Population analyses of experienced and student Naval aviators present evidence that the U. S. Navy aviation pilot community is in an above the average state of physical fitness with less than average coronary heart disease potential. Correlations found between cardiopulmonary fitness and psychophysiological responses that occur during simulated and/or actual flight operations present strong ecidence that flight performance could be favorably affected. HYPOBARIC TRAINING OF FLIGHT PERSONNEL WITHOUT COMPROMISING QUALITY OF LIFE
D. M. HERRON *In* AGARD Medical Selection and Physiological Training of Future Fighter Aircrew 7 p Dec. 1985
Avail: NTIS HC A07/MF A01

The increased incidence in decompression sickness during physiology training among U. S. Navy aircrew personnel and medical attendants requires a search for alternative means of permitting recognition and corrective action of hypoxia. The requirement for individual hypoxia training is considered valid not just by Navy regulations but by aeromedical practioners throughout the world. A proposal is made to utilize a gas mixture consisting of 7.4% oxygen and 92.6% nitrogen to induce hypoxia at ground level. This would permit ground level hypoxia training with similar symptoms of hypoxia as presently demonstrated at 25,000 feet in a decompresion chamber but would alleviate the primary cause of decompression sickness. All other U. S. Navy training objectives for the chamber exposure would be safely met and more efficiently demonstrated. The initial financial burden in modifying the existing decompression training chamber would be moderate when considering development and manufacturing of a new training device. The ultimate gain exists in decreased human suffering and the necessary return of credibility to the aeromedial training community. This is a must if we are to profess to do no harm.

THE EFFECT OF BREATHING ELEVATED CO2 GAS MIXTURES ON TRACKING PERFORMANCE, BLOOD PRESSURE, AND SUBJECTIVE TOLERANCE AT 1GZ
T. G. SHRIVER, D. W. REPPERGER, J. W. FRAZIER, C. D. GOODYEAR, and L. D. TRIPP Mar. 1986 52 p
(Contract F33615-81-C-0500)
(AD-A165974; AAMRL-TR-86-006) Avail: NTIS HC A04/MF A01 CSCL 06S

The addition of small concentrations (5-10%) of carbon dioxide (CO2) to the breathing gas has been identified as a possible technique to increase Gz tolerance for pilots. Eight subjects participated in an experiment to examine tracking performance, physiological parameters, and subjective tolerance when breathing the four following gas mixtures: air; 100% O2; 2.5% CO2 and 97.5% O2; and 3.5% CO2 and 96.5% O2. Tracking performance was not significantly different when breathing any of these four gas mixtures. Learning, which continued to occur throughout the experiment, was inhibited when the subjects were breathing the 3.5% CO2 mixture. When using either of the CO2 mixtures there was a significant increase in relative respiratory volume and a modest increase in systolic (11 mm Hg) and diastolic (6 mm Hg) blood pressure. One subject, when breathing 3.5% CO2, aborted the run after 12 minutes because of air hunger. GRA

METABOLIC CHANGES FOLLOWING ECCENTRIC EXERCISE IN TRAINED AND UNTRAINED MEN
W. J. EVANS, C. N. MEREDITH, J. G. CANNON, C. A. DINARELLO, and W. R. FRONTERA 1986 24 p
(AD-A166521; AD-E900544; USARIEM-M-20/86) Avail: NTIS HC A02/MF A01 CSCL 06P

The effects of one 45 minute bout of high intensity eccentric exercise (250 Watts) were studied in 4 male runners and 5 untrained men. Plasma creatine kinase (CK) activity in these runners was high ($p < 0.001$) than in the untrained men before exercise and peaked at 207 IU/ml one day after exercise, while in untrained men the maximum was 2143 IU/ml five days after exercise. Plasma interleukin-1 (IL-1) in the trained men was also higher ($p < 0.001$) than in the untrained men before exercise but did not significantly increase after exercise. In the untrained men, IL-1 was significantly elevated 3 hours after exercise ($p < 0.001$). In the untrained group only, 24-hour urines were collected before and after exercise while the men consumed a meat-free diet. Urinary 3-methyl-histidine/creatinine in the untrained group rose significantly from 126 umol/g before exercise to 180 umol/g ten days after exercise. The results suggest that in untrained men, eccentric exercise leads to a metabolic response indicative of delayed muscle damage. Regularly performed long distance running was associated with chronically elevated plasma IL-1 levels and serum CK activities without acute increases after an eccentric exercise bout. GRA

INDUCED ERYTHROCYTHEMIA AND MAXIMAL AEROBIC POWER: AN EXAMINATION OF MODIFYING FACTORS
M. N. SAWKA, A. J. YOUNG, S. R. MUZA, R. R. GONZALEZ, and K. B. PANDOLF Apr. 1986 23 p
(AD-A166522; AD-E900544; USARIEM-M-22/86) Avail: NTIS HC A02/MF A01 CSCL 06E

Induced erythrocythemia is associated with an increase in maximal oxygen uptake. Two factors which might influence inter-subject variability for this increase in maximal oxygen uptake are the magnitude of change in hemoglobin concentration and the individual's initial aerobic fitness. To examine these factors, we have obtained and combined individual data from our own research and three other studies which employed similar procedures. In each study freeze-preserved erythrocytes representing the product of two blood units were reinfused and maximal oxygen uptake was measured within 24 to 72-h after reinfusion. The 30 subjects had an initial aerobic power which ranged from 36 to 88 ml 02/dg/min. The combined results from these studies indicate that after erythrocyte reinfusion: 1) the increase in hemoglobin concentration is fairly homogeneous; 2) nearly all individuals demonstrate an increase in maximal oxygen uptake; 3) the magnitude of increase in hemoglobin concentration is not related to the magnitude of increase in maximal oxygen uptake is related to the individual's initial aerobic fitness. Individuals with an initial aerobic fitness between 50 to 64ml O2/kg/min experience approximately twice the increase in maximal oxygen uptake after erythrocyte reinfusion compared to individuals with lesser or greater fitness. GRA

INTRINSIC ALTERATION OF THE REACTIVE PROPERTIES OF ARTERIES DURING HYPOTHERMIA
N. R. BANDICK and D. E. ROBERTS 21 Mar. 1986 23 p
(AD-A166523; AD-E900544; USARIEM-M-21/86) Avail: NTIS HC A02/MF A01 CSCL 06E

This study compared the reactive and contractile properties of helical strips of femoral arteries taken from normothermic rabbits and rabbits that were anesthetized with pentobarbitol and cooled to 25 C at a rate of 7 C per hour. The purpose of this comparison was to see if intrinsic factors would alter the sensitivity and/or contractility of this vascular muscle to norepinephrine during whole body hypothermia. We found that, after two hours of in vivo hypothermia, the hypothermic derived tissue was from 10 to 100 times more sensitive to norepinephrine than the normothermic derived tissue. This augmented sensitivity continued while the tissue was in vitro for at least twelve hours. The dose-response curves of the hypothermic derived arteries were shifted to the left of the normothermic arteries resulting in a greater contractility at lower levels of agonist. Moreover, the normothermic tissue contracted slower than the hypothermic. The maximal tension developed by the strips was equivalent. This study has identified prolonged alterations of receptor sensitivities and contractility properties attributable to in vivo influences that can, in part, explain the disruptions of blood pressure during and following whold body hypothermia. PHYSICAL INTERACTION OF HUMANS AND ANIMALS WITH POWER-FREQUENCY ELECTRIC AND MAGNETIC FIELDS
W. T. KAUNE Feb. 1986 11 p Presented at the IEEE Power Engineering Society Winter Meeting, New York, N.Y., 2 Feb. 1986 (Contract DE-AC06-76RL-01830)
(DE86-007734; PNL-SA-13716; CONF-860210-3) Avail: NTIS HC A02/MF A01

Research has been underway for more than 15 years investigating the biological and physical interactions of power-frequency electric fields coupled to humans and animals through the air dielectric around electric-power facilities. Currently, fairly detailed analyses can be made for homogeneous human- and animal-shaped models standing on ground while exposed to a vertical electric field. Some data are available for ungrounded exposure conditions. However, little is known about the effects of the nonuniform electrical properties of living tissues on induced-current distributions. Recently, interest has also developed in the interaction of humans and animals with power-frequency magnetic fields. Little data are available, and only simple estimates, using homogeneous ellipsodial models, can be made at present. Relatively simple calculational techniques are available, however, to analyze two- and three-dimensional models of humans and animals, and it can be expected that considerable progress will be made in the next few years. ANALYSIS OF NYSTAGMUS RESPONSE TO A PSEUDORANDOM VELOCITY INPUT
C. S. LESSARD *In* NASA. Johnson Space Center NASA/American Soceity for Engineering Eduction (ASEE) Summer Faculty Fellowship Program, 1985 104 p Jul. 1986
Avail: NTIS HC A99/MF E03 CSCL 06P

Space motion sickness was not reported during the first Apollo missions; however, since Apollo 8 through the current Shuttle and Skylab missions, approximately 50% of the crewmembers have experienced instances of space motion sickness. Space motion sickness, renamed space adaptation syndrome, occurs primarily during the initial period of a mission until habilation takes place. One of NASA's efforts to resolve the space adaptation syndrome is to model the individual's vestibular response for basis knowledge and as a possible predictor of an individual's susceptibility to the disorder. This report describes a method to analyse the vestibular

system when subjected to a pseudorandom angular velocity input. A sum of sinusoids (pseudorandom) input lends itself to analysis by linear frequency methods. Resultant horizontal ocular movements were digitized, filtered and transformed into the frequency domain. Programs were developed and evaluated to obtain the (1) auto spectra of input stimulus and resultant ocular resonse, (2) cross spectra, (3) the estimated vestibular-ocular system transfer function gain and phase, and (4) coherence function between stimulus and response functions. FLOW CYTOMETRY ANALYSIS OF HORMONE RECEPTORS ON HUMAN PERIPHERAL BLOOD MONONUCLEAR CELLS TO IDENTIFY STRESS-INDUCED NEUROENDOCRINE EFFECTS

R. T. MEEHAN *In* NASA. Johnson Space Center NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1985 7 p Jul. 1986

Avail: NTIS HC A99/MF E03 CSCL 06P

Understanding the role of circulating peptide hormones in the pathogenesis of space-flight induced disorders would be greatly facilitated by a method which monitors chronic levels of hormones and their effects upon in vivo cell physiology. Single and simultaneous multiparameter flow cytometry analysis was employed to identify subpopulations of mononuclear cells bearing receptors for ACTH, Endorphin, and Somatomedin-C using monoclonal antibodies and monospecific antisera with indirect immunofluorescence. Blood samples were obtained from normal donors and subjects participating in decompression chamber studies (acute stress), medical student academic examination (chronic stress), and a drug study (Dexamethasone). Preliminary results indicate most ACTH and Endorphin receptor positive cells are monocytes and B-cells, exhibit little diurnal variation but the relative percentages of receptor positive cells are influenced by exposure to various stressors and ACTH inhibition. This study demonstrates the capability of flow cytometry analysis to study cell surface hormone receptor regulation which should allow insight into neuroendocrine modulation of the immune and other cellular systems during exposure to stress or microgravity.

DETECTION OF SYSTEM FAILURE BY HUMAN OPERATOR. I - THE CASE OF MONITOR

N. YUHARA and S. HORIUCHI Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 34, April 1986, p. 199-210. In Japanese, with abstract in English. refs

Two models describing human monitoring behavior in failure detection are proposed. The first model consists of two linear optimal estimators (Kalman filters), and the failure detection mechanism is based on Wald's Sequential Probability Ratio Test (SPRT). The two models' performances are validated in the comparison of digital simulation results of failure detection time and accuracy with data obtained from a set of failure detection experiments. R.R.

REVIEW ON SECONDARY TASK TECHNIQUE FOR WORKLOAD ASSESSMENT SOME CONSIDERATION OF SECONDARY TASK PARADIGMS AND AN ASSESSMENT MODEL

T. YAMAGUCHI (Nihon University, Tokyo, Japan) and Y. NAGASAWA (Japan Air Self Defense Force, Aeromedical Laboratory, Tokyo) Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, Dec. 1985, p. 159-168. In Japanese, with abstract in English. refs

The secondary task technique is reviewed, technical terms are defined, and a novel measuring paradigm is proposed. This novel paradigm (the dual task paradigm) involves a situation whereby the primary and secondary tasks are performed concurrently; both tasks are considered to be of equal importance and the operator is instructed to perform the two tasks with maximum effort. In effect, emphasis is placed on the maximum channel capacity in which the operator can perform two tasks concurrently. The inherent advantage of this dual task technique lies in the ability to evaluate the operator's workload using a workload index based on the maximum channel capacity and a time based model. K.K.

THEORETICAL PRINCIPLES UNDERLYING THE EVALUATION, CONTROL, AND CORRECTION OF THE IMPACT OF EMOTIONS ON COSMONAUT ACTIVITY [TEORETICHESKIE OSNOVY OTSENKI, METODOV KONTROLIA I KORREKTSII VLIIANIIA EMOTSII NA DEIATEL'NOST' KOSMONAVTA]

P. V. SIMONOV (AN SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR) Uspekhi Fiziologicheskikh Nauk (ISSN 0301-1798), vol. 17, Apr.-June 1986, p. 20-30. In Russian. refs

The genesis of the emotional stress arising in cosmonauts during space flights is discussed in the framework of Lebedev's (1980) information theory of emotions, which places emphasis on the effects of complete information or the lack of it on the emotional status of the cosmonaut. Among the psychophysiological methods recommended for dynamic evaluation of the pilot's emotional status, the monitoring of involuntary physiological functions, such as the heart rate, eyelid movements, and the acoustic speech parameters, are of primary importance. As the best measure against neuroemotional stress, it is recommended that the pilot be independent of ground-based command and confirmation. The cosmonauts should be given thorough training in a great variety of practical skills needed in regular flight and in every foreseeable emergency situation. I.S.

ENHANCED DETECTION IN THE APERTURE OF FOCAL ATTENTION DURING SIMPLE DISCRIMINATION TASKS

D. SAGI (Weizmann Institute of Science, Rehovot, Israel) and B. JULESZ (AT&T Bell Laboratories, Murray Hill, NJ) Nature (ISSN 0028-0836), vol. 321, June 12, 1986, p. 693-695.

It is considered whether attention directed toward a specific position in the visual field for an orientation discrimination tasks improves performance on a simple detection tasks in the area to which attention is directed. It is found that a small test flash can be detected when it is positioned near a peripheral line target presented briefly, if the orientation of the target has to be identified. The test flash cannot be detected when presented at some distance from the same target or when another target has to be identified. This enhancement implies that even simple identification takes such as orientation discrimination are not performed passively by the visual system. C.D.

DIVISION OF ATTENTION AS A FUNCTION OF THE NUMBER OF STEPS, VISUAL SHIFTS, AND MEMORY LOAD
R. A. CHECHILE (Tufts Univ., Medford, Mass.), K. BUTLER, W. GUTOWSKI, and E. A. PALMER 1986 11 p
(Contract NCA2-OR785-801)
(NASA-TM-88775; NAS 1.15:88775) Avail: NTIS HC A02/MF A01

The effects on divided attention of visual shifts and long-term memory retrieval during a monitoring task are considered. A concurrent vigilance task was standardized under all experimental conditions. The results show that subjects can perform nearly perfectly on all of the time-shared tasks if long-term memory retrieval is not required for monitoring. With the requirement of memory retrieval, however, there was a large decrease in accuracy for all of the time-shared activities. It was concluded that the attentional demand of longterm memory retrieval is appreciable (even for a well-learned motor sequence), and thus memory retrieval results in a sizable reduction in the capability of subjects to divide their attention. A selected bibliography on the divided attention literature is provided. Author

THE EFFECT OF SPECTRALLY SELECTIVE FILTERS ON VISUAL SEARCH PERFORMANCE Final Report
G. T. CHISUM, J. B. SHEEHY, P. E. MORWAY, and G. K. ASKEW 8 Aug. 1985 17 p
(AD-A165835; NADC-85115-60) Avail: NTIS HC A02/MF A01 CSCL 06P

The effect of five spectrally selective filters on the performance of an acuity dependent visual search task was evaluated. The filters were: (A)a neutral density filter (control condition); (B)a 52 00A green interference filter; (C)a 3215-250 red filter; (D)a neodymium visor; and (E)a holographic filter. The observers were presented with five blocks of ten slides per filter. Each slide projected a 6 by 6 deg field of 900 ten min of arc letter Os which contained a single Landolt C. The observers were required to search the field and report the orientation of the opening in the C. The opening in the C, which subtended 2.64 min of arc, required an acuity of 0.39 for detection. Response time, error rate, accommodative accuracy, and the number of fixations and their duration were recorded for each slide presentation. The results demonstrate that filter type had no effect on any of the response measures. During the first three trial blocks the observers appeared to optimize their search strategies, after which they began to revert to their initial performance levels. Although this effect was not supported statistically, this trend indicates that initially search proficiency increases with practice after which it is offset by fatigue. GRA

THE IMPORTANCE OF SPECIALIZED COGNITIVE FUNCTION IN THE SELECTION OF MILITARY PILOTS
H. W. GORDON and R. LEIGHTY 19 Mar. 1986 43 p
(Contract N00014-83-K-0208)
(AD-A165889) Avail: NTIS HC A03/MF A01 CSCL 05J

Visuospatial skills significantly distinguished student Naval aviators who dropped out of aviation training from those who received their wings. While both groups were better than average on these tests, the winged aviators were better than the dropout group by 0.25 standard deviation which is highly significant ($P<0.0001$) for the total sample of 600 subjects. Performance on verbal-sequential skills did not distinguish between the groups. Logistic regression not only confirmed the group difference but demonstrated an interaction with verbal-sequential skills. High performance on these skills helped the odds of being winged for aviators with low visuospatial ability but hindered those with high visuospatial ability. Distribution of visusopatial scores for the 2 groups demonstrated reasonable cut-off points at which considerably more drop-outs than winged aviators could have been eliminated. However, these data are relevant only for the selected sample of aviators accepted for the training programs. An additional study on the entire group of applicants including those rejected would allow comparison between the special cognitive tests used in this study and those already used as selection criteria. SPATIOTEMPORAL CHARACTERISTICS OF VISUAL LOCALIZATION Final Report, 1 Jun. 1982 - 31 Aug. 1985
C. A. BURBECK 30 Oct. 1985 21 p
(Contract F49620-82-K-0024)
(AD-A166097; AFOSR-86-0109TR) Avail: NTIS HC A02/MF A01 CSCL 20F

The main thrust of this research effort has been investigation of the spatial and temporal properties of the visual processes underlying relative spatial localization by human observers. The initial tasks were development of a suitable laboratory display system for generating the required stimuli, and development of appropriate experimental paradigms for studying the localization of widely separated objects. The second task was to make careful quantitative measurements of the spatial and temporal properties of the system underlying localization of widely separated objects. It was found that many of the stimulus manipulations that are critical in determination of contrast detection thresholds have little or no effect on localization accuracy. The relative localization of widely separated objects is a highly robust visual ability. Those variations in localization accuracy with changes in the spatial and temporal parameters of the stimulus that were obtained could readily be modeled as natural extensions of the threshold properties. The final task of this project was testing of existing models of spatial ability that can be accounted for by current models of spatial vision. Specific extensions of the existing model were suggested by the data. GRA

AN INVESTIGATION OF THE USE OF STEADY-STATE EVOKED POTENTIALS FOR HUMAN PERFORMANCE AND WORKLOAD ASSESSMENT AND CONTROL Final Technical Report, 15 Jun. 1983 - 14 Jun. 1985
S. L. MOISE, JR. Jun. 1985 66 p
(Contract F49620-83-C-0102)
(AD-A166205; AFOSR-86-0110TR) Avail: NTIS HC A04/MF A01 CSCL 05J

This program of research investigated Steady-State Evoked Potential (SSEP) measures to determine their utility for evaluating sensory inputs, workload, and performance variables in human operators. A primary purpose was to find techniques and measures that could be generalized to groups of subjects in operational environments. SSEP measures included power (amplitude), coherence, phase lag, and Relative Transmission Time (RTT). Included in this effort were studies of: (1) Frequency masking, where multiple frequencies were presented simultaneously. (2) Sensory inputs which may manipulate SSEP (e.g., color, intensity, cross-modality stimulation). (3) Correlation of SSEP measures with fatigue and tack difficulty. (4) The relationship between performance in a tracking task and SSEP measures. GRA

THE EFFECTS OF COLOR-CODING IN GEOSIT (GEOGRAPHICAL SITUATIONAL) DISPLAYS. 2: REDUNDANT VERSUS NON-REDUNDANT COLOR-CODING Interim Report
A. R. JACOBSEN, W. H. ROGERS, and D. F. NERI 15 Jan. 1986 26 p
(AD-A166263; NSMRL-1069-2) Avail: NTIS HC A03/MF A01 CSCL 05H

The effect on search time of redundant versus non-redundant color-coding of symbols in geographical situational (GEOSIT) displays was evaluated using 36 observers who were randomly assigned to three coding schemes: monochrome-coding, redundant color-coding, and non-redundant color-coding. In the color-coding schemes, only the threat information (Friendly, Unknown, and Hostile) was color coded, either redundantly with shape or not. The platform information (Submerged, Surface, and Airborne) was coded by shape in all three coding schemes. Performance when searching for the color-coded threat target categories was enhanced by over 100% compared to monochrome shape-coding. In addition, response time on the non-color-coded platform categories was significantly faster under the non-redundant color-coding scheme than under the redundant color-coding scheme. Author (GRA)

ATTENTION TASKS AND THEIR RELATION TO AGING AND FLIGHT EXPERIENCE
L. C. BOER Feb. 1986 28 p
(Contract A83/KLU/078)
(IZF-1986-4; TDCK-86-0585; ESA-86-97400) Avail: NTIS HC A03/MF A01

The Dichotic Listening Task (DLT) of Gopher and Kahneman (1971) was studied in a group of 143 aviators, aged between 17 and 70 yr. Other tasks of the study were the Continuous Memory Task (CMT) and two choice-RT tasks with visual stimuli. An attention questionnaire was also administered. Aging has negative effects on all tasks, especially on the DLT. With age factored out, no substantial correlations between DLT and other tasks are found. The only exception is a moderate correlation with choice RT. Differences between subgroups of aviators (42 airline pilots and 50 private pilots) were studied. The assumption was that airline pilots had higher levels of aviator skill. The DLT, CMT, and one of the RT tasks correlate with aviator subgroup. A second study with 16 flight cadets finds significant correlations between DLT and RT tasks on the one hand, and pilot gradings obtained later. It is concluded that DLT and RT tasks offer prospects for improving the selection of aviators. ESA

The investigators have shown that single cortical neurons adapt in such a way as to support learned behavior. What is particularly interesting is the indication that purposefully complex, molecular cascades exist at the level of single nerve cells to permit successful adaptions to occur. Successful adaptions are defined as: (a) producing the desired alteration of response to the appropriate input, (b) enduring over time, (c) not interfering with other adaptions occurring for another purpose in the same cell, and (d) not interfering with the main-throughput-message transfer property of the nerve cell. The result of these adaptations is to support the operation of a self-organizing information processing system with a high success: error ratio and excellent survivability in the face of substantial environmental change. Changes in the excitability of cortical neurons occur that lead to acquisition of the ability to perform specific motor tasks in response to specific auditory stimuli. Rates of acquiring this ability can be substantially increased by adding electrical stimulation of the hypothalamus associatively, to presentations of conventional conditioned and unconditioned stimuli. Part of this acceleration of learning the motor response may derive from recruitment of a new performance pathway-reflected in a longer transmission latency for movement production. A long range goal of the research is to understand how the system picks the right pathway. GRA

AIR AMBULANCE REGULATIONS - A MODEL
F. THOMAS, H. GIBBONS, and T. P. CLEMMER (LDS Hospital; Salt Lake County, Dept. of Health; Utah, University, Salt Lake City) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, July 1986, p. 699-705. refs

Prior attempts at establishing minimal federal air ambulance regulations and standards have been unsuccessful. However, reports of poor patient medical care during transport by some air ambulance services is now forcing many states to initiate air ambulance regulations. In 1984, the State of Utah Emergency Medical Services convened a special subcommittee to develop aeromedical regulations for the State of Utah. Using a three-level approach based upon the patient's requirements for basic, advanced, or specialized medical care and the urgency of transport, the subcommittee was able to derive medical categories necessary for the selection and utilization of air ambulance services. Minimum

air ambulance regulations were then established for aircraft configuration, flight crew requirements, minimal equipment and medications, and the responsibilities of the medical director or designee for each of the three levels of medical care. It is concluded that the application of a levels approach based upon the patient's medical requirements may be useful in assisting other states attempting to establish flexible but specific regulations directed at the safe transport of patients by aeromedical evacuation. ENVIRONMENTAL CONTROL AND LIFE SUPPORT SYSTEMS
K. THORMER (Dornier System GmbH, Friedrichshafen, West Germany) IN: Space - Technology and opportunity; Proceedings of the Conference, Geneva, Switzerland, May 28-30, 1985 . Pinner, England, Online Publications, 1985, p. 91-100. refs

The design of the life support and environmental control systems (ECLSS) for the ESA Columbus module of the Manned Space Station (MSS) is proceeding mainly on the basis of experience with Spacelab. One deviation will be recycle waste water and breathing air wherever possible to avoid transportation costs, closing the on-board loop where possible. CO2 will, however, initially have to be removed from the air, probably with LiOH cartridges that will be returned to earth when the cartridges reach capacity. A solid amine CO2 regenerator is being studied to eliminate the cartridges. Subsequent evolutions will move toward closing the loop with electrolytic oxygen generation, probably with water vapor electrolysis. Reliable removal of air constaminants will require basic research in the technology. A block diagram is provided of the proposed ECLSS design. M.S.K.

THE TECHNOLOGY IMPACT OF THE ADVANCED TECHNOLOGY CREW PROTECTION (ATCP) SYSTEM ON HIGH PERFORMANCE AIRCRAFT
K. K. ALEXANDER (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, OH), T. A. HENNEMAN, and S. A. THOMPSON (Northrop Corp., Aircraft Div., Hawthorne, CA) SAFE Journal, vol. 16, no. 2, Summer 1986, p. 22-27.
(Contract F33615-84-C-3407)

A description of the Advanced Technology Crew Protection (ATCP) system, integrating many cockpit functions and components directly into the crewman's flight garment, and including a 57-degree semisupine seat and aircraft mounted ancillary equipment, and its potential impact on future fighter aircraft performance, are presented. The system is capable of protecting against high g forces, high q forces, high altitudes, Nuclear Biological Chemical threats, and High Energy fragments, and it provides all-axis restraint, closed-loop cooling, and breathing assistance. Emergency subsystems will enable critical autonomous operational capability, and the ATCP will provide get-me-down capability or post-ejection survival protection. Crewmember stress and fatigue is expected to be lowered, and, for the aircraft studied, it is expected that the ATCP will provide increase altitude capability, lower drag, and very high-g capability. R.R.

PREFERRED DECLINATION OF THE LINE OF SIGHT
S. G. HILL and K. H. E. KROEMER (Virginia Polytechnic Institute and State University, Blacksburg) Human Factors (ISSN 0018-7208), vol. 28, April 1986, p. 127-134. refs

This research concerned the angle at which people prefer to look down at visual targets and tasks. Thirty-two subjects participated in a study with four different head positions, two visual tasks, and two target distances. The overall preferred mean angle in the midsagittal plane below the Frankfurt Plane was -34 deg. Head position had significant effects on angle: subjects sitting with their heads upright preferred an average declination of -29 deg, but -40 deg when supine. Target distance also significantly affected the line-of-sight angle, with subjects preferring targets at 0.50 m to be at -38 deg, but targets at twice that distance at -30 deg. The task did not influence the preferred angle. Author

VISUAL ACCOMMODATION AND VIRTUAL IMAGE DISPLAYS - TARGET DETECTION AND RECOGNITION
J. NORMAN and S. EHRLICH (Haifa, University, Israel) Human Factors (ISSN 0018-7208), vol. 28, April 1986, p. 135-151. refs

Twelve subjects performed a complex task, detecting and recognizing small targets presented at infinity, while simultaneously monitoring a virtual image display (VID). The VID was presented at one of four optical distances (2.0, 0.5, 0.0, and -0.5 D). Optical distance was found to affect detection and recognition performance, mainly at the extreme value of 2.0 D. Interactions between optical distance and grouping of subjects according to measures of accommodation indicated that the three other optical distances affect performance differentially. The subjects' resting position of accommodation (RPA) and a combined measure of accommodation range and RPA were significantly correlated with performance (0.58). A narrowing of the functional visual field (complete misses of peripheral targets) was found at the 2.0-D optical distance for all subjects, and at the other optical distances for the subjects with an inferior accommodative mechanism (i.e., a near RPA and/or a narrow accommodation range). Author

METHODS OF MEASURING THE ATTENUATION OF HEARING PROTECTION DEVICES
E. H. BERGER (Cabot Corp., Indianapolis, IN) Acoustical Society of America, Journal (ISSN 0001-4966), vol. 79, June 1986, p. 1655-1687. refs

Hearing protection device (HPD) attenuation evaluation methods are described. The insertion loss of an HPD is utilized to assess the reduction in sound pressure level (SPL) when HPDs are applied. The experimental conditions and procedures for three real-ear attenuation at threshold (REAT) techniques, nine above-threshold methods, and four objective methods of measuring hearing protection attenuation are examined. The accuracy, practicality, and applicability of the various techniques are analyzed. Measurements on linear and nonlinear HPDs and the potential level dependent effects are investigated. It is observed that the REAT method is the most accurate because it assesses all sound paths to the occulded ear. The data indicate that attenuation is independent of SPL for linear protectors and therefore the use of above-threshold procedures to evaluate attenuation is not required. It is detected that all objective procedures do not accurately evaluate the significance of the flanking-bone conduction paths; however, the acoustical test fixture technique is recommended based on quality control, time savings, and buyer acceptance testing. A microphone in real-ear approach is proposed for future attenuation evaluations. I.F.

ENVIRONMENTAL CONTROL/LIFE SUPPORT SYSTEM FOR SPACE STATION
C. W. MILLER, D. B. HEPPNER, F. H. SCHUBERT, and M. J. DAHLHAUSEN (Life Systems, Inc., Cleveland, OH) Earth-Oriented Applications of Space Technology (ISSN 0277-4488), vol. 6, no. 2, 1986, p. 213-229. Research supported by Life Systems, Inc., and NASA.

The functional, operational, and design load requirements for the Environmental Control/Life Support System (ECLSS) are described. The ECLSS is divided into two groups: (1) an atmosphere management group and (2) a water and waste management group. The interaction between the ECLSS and the Space Station Habitability System is examined. The cruciform baseline station design, the delta and big T module configuration, and the reference Space Station configuration are evaluated in terms of ECLSS requirements. The distribution of ECLSS equipment in a reference Space Station configuration is studied as a function of initial operating conditions and growth orbit capabilities. The benefits of water electrolysis as a Space Station utility are considered. I.F.

ADVANCED SPACE SUIT DEVELOPMENT FOR FUTURE ON-ORBIT OPERATIONS
J. L. ZELON (ILC Space Systems, Houston, TX) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 8 p. refs
(AIAA PAPER 86-2310)

This paper describes the planned space suit developments for future on-orbit operations including Shuttle, Space Station and Transatmospheric based missions. The issues driving design changes in the current Shuttle EMU for Space Station are defined. In addition, advanced development programs underway by NASA in pressure suit closure design, joint technology and glove technology are identified. Author

ZERO-G SIMULATION VERIFIES EVA SERVICING OF SPACE STATION MODULES
B. N. GRIFFIN (Boeing Aerospace Co., Huntsville, AL) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 6 p.
(AIAA PAPER 86-2312)

The Space Station accommodations required for on orbit zero-g maintenance and repair were evaluated during two months of neutral buoyancy testing. Boeing, in a joint effort with NASA, used Shuttle-type pressure suits and the simulated weightlessness provided by neutral buoyancy to assess four areas of hardware and operations. These included: (1) Space Station System Architecture; (2) Common Module Exterior; (3) Common Module Interior; and (4) Voice-Activated Systems. Specifically, the tests focused on servicing debris shield/body-mounted radiator panels, replacement of thermal blankets or Multi-Layer insulation and repair techniques for debris damage. Design engineers and astronauts participated as pressure-suited test subjects in evaluation of a broad range of concept options. The significant findings for these tests are: (1) the astronaut positioning arm is one of the most useful tools for Space Station EVA operations; (2) the minimum separation between modules should be 78 inches; (3) axial debris panels were preferred over circumferential; (4) on-orbit repair techniques for debris-damaged modules were effective; and (5) voice-activated systems are ideal for EVA. Improved suit communications, however, are required for implementation. Author

GROWTH EVOLUTION OF THE SPACE STATION ECLSS
W. R. HUMPHRIES (NASA, Marshall Space Flight Center, Huntsville, AL) and R. G. SOSNAY (Martin Marietta Aerospace, Denver, CO) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 10 p.
(AIAA PAPER 86-2313)

This paper discusses the planned evolution and growth of the Space Station ECLSS. It discusses the planning on-going at the early design stages to enable growth from a man-tended configuration of the Space Station (wherein the Space Station would be manned only when visited by the Orbiter) to a fully operational configuration (called Initial Operational Capability - IOC) which includes a permanently manned, fully operational Space Station. The paper then also discusses how the IOC Space Station ECLSS can evolve to account for increase in crew sizes, increase in the number of attached modules, increase in the capability to handle more payload/customer support, and potential evolution of the ECLSS technologies. IMPACT OF AUTOMATION ON SPACE STATION MMI DESIGN
P. G. JAMAR (Honeywell Systems and Research Center, Minneapolis, MN) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 5 p. refs
(AIAA PAPER 86-2316)

Space-based crews are expected to interact with highly automated and possibly intelligent systems, to perform these interactions with often little or no prior training, and to do so on an infrequent or sporadic basis. These activities will characterize a new role for space-based crews, that of supervisory control. Supervisory control tasks in turn define a new set of requirements for Space Station man-machine interface (MMI) design: (1) multi-function display and control hardware, (2) displays that enhance the crew person's 'mental model' of invisible processes, (3) highly supportive man-machine dialogue, including special features to support dialogue with expert systems, and (4) incorporation of machine intelligence into the MMI itself to provide a seemingly uniform interface to numerous processes, data bases, and expert systems. A discussion of these concepts is illustrated by examples from recent MMI designs, including a multi-function display and control system developed for the Space Shuttle, and MMI system developed for NASA JSC for the Space Station environmental control and life support system, and ATOZ - an intelligent interface system. ADVANCED OPERATOR/SYSTEM INTERFACE CONCEPTS FOR THE SPACE STATION
C. M. CASE and P. S. Y. LIN (Boeing Aerospace Co., Huntsville, AL) AIAA, Space Station in the Twenty-first Century, Meeting, Reno, NV, Sept. 3-5, 1986. 8 p.
(Contract NAS8-36526)
(AIAA PAPER 86-2317)

Concepts and data developed as part of the Preliminary Space Station Automation and Robotics Plan are reviewed as well as candidate selection criteria, technology assessments, and preliminary candidate recommendations. A need for development of advanced operator/systems interface (OSI) concepts to support future Space Station automation and robotics applications is identified. Four candidate applications, illustrating the potential benefits of an advanced OSI, are described. These include: (1) a conversational OSI system, (2) a laboratory experiment manipulator system, (3) a module safety advisor, and (4) an integrated

maintenance/training system. These specific automation and robotics applications are expected to occur relatively early in the growth of the Space Station and to provide significant commercial and station benefits throughout the life of the station. Author

IMPLICATIONS OF PRIVACY NEEDS AND INTERPERSONAL DISTANCING MECHANISMS FOR SPACE STATION DESIGN Progress Report, Jul. - Aug. 1985
A. A. HARRISON, R. SOMMER, N. STRUTHERS, and K. HOYT 30 Aug. 1985 26 p
(Contract NAG2-357)
(NASA-CR-176938; NAS 1.26:176938) Avail: NTIS HC A03/MF A01 CSCL 05H

Privacy needs, or the need of people to regulate their degree of contact with one another, and interpersonal distancing mechanisms, which serve to satisfy these needs, are common in all cultures. Isolation, confinement, and other conditions accociated with space flight may at once accentuate privacy needs and limit the availability of certain common interpersonal contact. Loneliness occurs when people have less contact with one another than they desire. Crowding occurs when people have more contact with one another than they desire. Crowding, which is considered the greater threat to members of isolated and confined groups, can contribute to stress, a low quality of life, and poor performance. Drawing on the general literature on privacy, personal space, and interpersonal distancing, and on specialized literature on life aboard spacecraft and in spacecraft-analogous environments, a quantitative model for understanding privacy, interpersonal distancing, loneliness, and crowding was developed and the practical implications of this model for space station design were traced. (NASA-CR-171926; NAS 1.26:171926) Avail: NTIS HC A04/MF A01 CSCL 06B

The operation of a physiological monitoring system (PMS) is described. Specifications were established for performance, design, interface, and test requirements. The PMS is a compact, microprocessor-based system, which can be worn in a pack on the body or may be mounted on a Spacelab rack or other appropriate structure. It consists of two modules, the Data Control Unit (DCU) and the Remote Control/Display Unit (RCDU). Its purpose is to collect and distribute data from physiological experiments in the Spacelab and in the Orbiter. Author

ASSISTED POSITIVE PRESSURE BREATHING AND MODIFIED ANTI-ACCELERATION SUIT FILLING TESTED UP TO 9 G IN A HUMAN CENTRIFUGE, KAROLINSKA INSTITUTE
U. I. BALLDIN Feb. 1986 14 p In SWEDISH; ENGLISH summary Sponsored by Swedish Material Administration of Armed Forces Air Material Department
(FOA-C-50038-H1; ISSN-0347-7665; ESA-86-97242) Avail: NTIS HC A02/MF A01

A modified anti-acceleration suit with ready pressure, faster filling, and higher end-pressure combined with normal breathing, and assisted and unassisted positive pressure breathing, was tested. Two acceleration-induced losses of consciousness occur at 8 to 9 G with normal breathing, but not with positive pressure breathing. Further negative physiological reactions are not recorded. Assisted positive pressure breathing is usually rated as best. Additional physical inconvenience occurs as a consequence of the high acceleration stresses, irrespective of equipment. ESA

Progress was made in the three following areas. In the rule-based modeling area, two papers related to identification and significane testing of rule-based models were presented. In the area of operator aiding, research focused on aiding operators in novel failure situations; a discrete control modeling approach to aiding PLANT operators was developed; and a set of guidelines were developed for implementing automation. In the area of flight simulator hardware and software, the hardware will be completed within two months and initial simulation software will then be integrated and tested.

Avail: NTIS HC A03/MF A01 CSCL 05H

Within the constraints of the syntax language, the set of observation descriptions which determines the discriminations which can be made, and the number of observations classified, a method is to be devised for determining the relative frequency over instantiation with which a rule of equal or greater generality would be identified. Generality, here, is defined as the number of observations described by a rule. A covering algorithm (Aq, Michalski 1973) was used to identify pilot strategy (system of rules) in maneuvering to avoid intruders. B.G.

A DISCRETE CONTROL MODEL OF PLANT
C. M. MITCHELL *In its* Pilot Interaction With Automated Airborne Decision Making Systems 31 p Jul. 1985
Avail: NTIS HC A03/MF A01 CSCL 05H

A model of the PLANT system using the discrete control modeling techniques developed by Miller is described. Discrete control models attempt to represent in a mathematical form how a human operator might decompose a complex system into simpler parts and how the control actions and system configuration are coordinated so that acceptable overall system performance is achieved. Basic questions include knowledge representation, information flow, and decision making in complex systems. The structure of the model is a general hierarchical/heterarchical scheme which structurally accounts for coordination and dynamic focus of attention. Mathematically, the discrete control model is

defined in terms of a network of finite state systems. Specifically, the discrete control model accounts for how specific control actions are selected from information about the controlled system, the environment, and the context of the situation. The objective is to provide a plausible and empirically testable accounting and, if possible, explanation of control behavior. B.G.

MAKING THE HUMAN-MACHINE INTERFACE RESPONSIVE TO MANY CLASSES OF USERS
R. W. BARNARD 1986 15 p Presented at the DECUS Symposium, Dallas, Tex., 27 Apr. 1986
(Contract DE-AC04-76DP-00789)
(DE86-003453; CONF-860470-1) Avail: NTIS HC A02/MF A01

An applications program must be able to interact with users who have a range of familiarity with its operation. A novice user needs more guidance than an experienced one, and a rigid type of interaction (such as menus) will not meet the needs of all users. Frustrations with the program are reduced and productivity is increased by using a flexible means of response which matches the level of response to the needs of the user. This paper illustrates techniques to provide only as much guidance as the user requires. The methods discussed here permit the user to switch among three levels of guidance (none, short prompts, and menus) and to have context-sensitive help readily available Because frequent users of a program will soon become quite proficient, supplying default answers and command entry shortcuts are also beneficial. These techniques have been used in a program which meets the needs of users who have all ranges of proficiency. DOE

(Contract DE-AC07-76ID-01570)
(DE86-008183; EGG-SSDC-31) Avail: NTIS HC A03/MF A01

The paper presents a task analysis form for the organization of task analysis efforts. In terms of the form, task descriptions for use in task analysis data collection are given, and detailed definitions of 35 task analysis categories are offered. The categories include important aspects of task performance, consequences, and feedback, as well as aspects of training and knowledge requirements. Methods behind the derivations of tasks and subtasks, and category analysis are explained. Aspects of data applications concerning who and how are discussed. Task analysis can be used in the development of behavioral learning objectives and instructional strategies. Action verbs are often used in category analysis and human capabilities identification. Curriculum and tesis may be developed by analyzing what people do and need in their jobs. The process of task analysis is a useful tool in the analysis and improvement of human job performance. DOE

HUMAN FACTORS MANAGEMENT
R. J. NERTNEY and D. L. FILLMORE Jul. 1985 44 p
(Contract DE-AC07-76ID-01570)
(DE86-008184; SSDC-30) Avail: NTIS HC A03/MF A01

Evaluating a system to determine if it has the right people working using the right procedures and management controls with the right hardware at all times is the facet of human factors discussed in this manual. The following areas of concern are specifically addressed: (1) the selection process must be proper to select qualified workers who are given proper training for the work and whose skills are maintained; (2) a proper behavioral climate must be established at the work station; (3) all task assignments must contain elements of instruction and training; and (4) all supporting systems must interact with the human to ensure that the work can be completed. All of these areas of concern can be successfully completed using the existing company organization by following the considerations presented in this document and maintaining proper interfaces between the different branches of the company. DOE

EVALUATING SPACE STATION APPLICATIONS OF AUTOMATION AND ROBOTICS TECHNOLOGIES FROM A HUMAN PRODUCTIVITY POINT OF VIEW
J. F. BARD *In its* NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1985 46 p Jul. 1986
Avail: NTIS HC A99/MF E03 CSCL 05H

The role that automation, robotics, and artificial intelligence will play in Space Station operations is now beginning to take shape. Although there is only limited data on the precise nature of the payoffs that these technologies are likely to afford there is a general consensus that, at a minimum, the following benefits will be realized: increased responsiveness to innovation, lower operating costs, and reduction of exposure to hazards. Nevertheless, the question arises as to how much automation can be justified with the technical and economic constraints of the program? The purpose of this paper is to present a methodology which can be used to evaluate and rank different approaches to automating the functions and tasks planned for the Space Station. Special attention is given to the impact of advanced automation on human productivity. The methodology employed is based on the Analytic Hierarchy Process. This permits the introduction of individual judgements to resolve the confict that normally arises when incomparable criteria underly the selection process. Because of the large number of factors involved in the model, the overall

problem is decomposed into four subproblems individually focusing on human productivity, economics, design, and operations, respectively. The results from each are then combined to yield the final rankings. To demonstrate the methodology, an example is developed based on the selection of an on-orbit assembly system. Five alternatives for performing this task are identified, ranging from an astronaut working in space, to a dexterous manipulator with sensory feedback. Computational results are presented along with their implications. A final parametric analysis shows that the outcome is locally insensitive to all but complete reversals in preference. Author

DEFINING RECLAIMED WATER POTABILITY REQUIREMENTS
D. S. JANIK *In* NASA. Johnson Space Center NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1985 49 p Jul. 1986
Avail: NTIS HC A99/MF E03 CSCL 06K

Water used during previous space missions has been either carried or made aloft. Future human space endeavors will probably have to utilize some form of water reclamation and recycling. There is little applied experience in either the US or foreign space programs with this technology. Water reclamation and recycling constitutes an engineering challenge of the broadest nature and will require an intensive research and development effort if this technology is to mature in time for practical use on the proposed US spacestation. In order for this to happen, reclaimed/recycled water specification will need to be devised to guide engineering development. Perhaps the most strigent specifications will involve water to be consumed. NASA's present Potable Water Specifications are not applicable to reclaimed or recycled potable water. No specifications for reclaimed or recycled potable water presently exist either inside or outside NASA. NASA's past experience with potable water systems is reviewed, limitations of the present Potable Water Specifications are examined, present world expertise with potable water reclamation/recycling systems and system analogs is reviewed, and an approach to developing pertinent Reclaimed/Recycled Potable Water Specifications for spacecraft is presented. DIATOMS ON EARTH, COMETS, EUROPA AND IN INTERSTELLAR SPACE
R. B. HOOVER, M. J. HOOVER (NASA, Marshall Space Flight Center, Huntsville, AL), F. HOYLE, N. C. WICKRAMASINGHE, and S. AL-MUFTI (University College, Cardiff, Wales) Earth, Moon, and Planets (ISSN 0167-9295), vol. 35, May 1986, p. 19-45. refs

There exists a close correspondence between the measured infrared properties of diatoms and the infrared spectrum of interstellar dust as observed in the Trapezium nebula and toward the galactic center source GC-IRS 7. Diatoms and bacteria also exhibit an absorbance peak near 2200 A, which is found to agree with the observed ultraviolet absorbance properties of interstellar grains. The observational data are reviewed, and the known properties of diatoms and bacteria are considered. It is suggested that these characteristics are consistent with the concept of a cosmic microbiological system in which these or similar microorganisms might exist on comets, Europa and in interstellar space. THE QUESTION OF LIFE ON MARS
B. ADELMAN British Interplanetary Society, Journal (Solar System Exploration) (ISSN 0007-084X), vol. 39, June 1986, p. 256-262. refs

The discoveries made with respect to Martian life are described with particular emphasis placed on the Viking Lander biology experiments. Post-Viking research is discussed along with plans for further investigation on future missions. The views of Levin and Straat (1981) are outlined with attention given to the following: (1) oxidizing compounds, (2) the adverse effects of water, (3) the heating of controls, (4) the absence of organic compounds, and (5) the notion that the results of the Gas Exchange Experiment and the Labeled Release Experiment are nonbiological. The presumed properties of Martian life (if it does exist) include the following: (1) Martian life is carbon based, (2) Martian organisms are microscopic in size, (3) they are anaerobes functioning at a low metabolic level, and (4) they are highly resistant to extreme cold and dryness. Criteria established by the National Research Council for Martian life are outlined. K.K.

EFFECTS OF SIMULATED WEIGHTLESSNESS ON MEIOSIS, FERTILIZATION, AND EARLY DEVELOPMENT IN MICE Final Report, 1 Jul. 1982 - 30 Apr. 1986
D. J. WOLGEMUTH 1986 18 p
(Contract NAG2-324)
(NASA-CR-177106; NAS 1.26:177106) Avail: NTIS HC A02/MF A01 CSCL 06C

The initial goal was to construct a clinostat which could support mammalian cell culture. The clinostat was selected as a means by which to simulate microgravity conditions within the laboratory, by constant re-orientation of cells with respect to the gravity vector. The effects of this simulated microgravity on in-vitro meiotic maturation of oocytes, using mouse as the model system, was investigated. The effects of clinostat rotation on fertilization in-vitro was then examined. Specific endpoints included examining the timely appearance of male and female pronuclei (indicating fertilization) and the efficiency of extrusion of the second polar body. Particular attention was paid to detecting anomalies of fertilization, including parthenogenetic activation and multiple pronuclei. Finally, for the preliminary studies on mouse embryogenesis, a key feature of the clinostat was modified, that of the position of the cells during rotation. A means was found to immobilize the cells during the clinostat reotation, permitting the cells to remain at the axis of rotation yet not interfering with cellular development. B.G.

A POSSIBLE ROLE FOR ENDOGENOUS GLUCOCORTICOIDS IN ORCHIECTOMY-INDUCED ATROPHY OF THE RAT LEVATOR ANI MUSCLE: STUDIES WITH RU38486, A POTENT AND SELECTIVE ANTIGLUCOCORTICOID
M. KONAGAYA (Nara Medical Coll., Japan) and S. R. MAX Nov. 1985 17 p Submitted for publication
(Contract NAG2-100)
(NASA-CR-177029; NAS 1.26:177029) Avail: NTIS HC A02/MF A01 CSCL 06C

RU38486, a potent and selective antiglucocorticoid, was employed to study a possible role for endogenous glucocorticoids in atrophy of the levator ani muscle secondary to castration of male rats. RU38486 was shown to block (3H) triamcinolone acetonide binding to cytosol from levator ani muscle. Daily oral administration of RU38486 to castrated rats partially prevented atrophy of the levator ani muscle, as well as a decrease in RNA concentration. In a control group receiving RU38486 alone, the levator ani underwent significant (20%) hypertrophy. Administration of exogenous dexamethasone also caused pronounced atrophy of the levator ani muscle. This atrophy was prevented, to a significant degree, by simultaneous oral administration of RU38486. It is concluded that endogenous glucocorticoids, the actions of which are blocked by RU38486, may be involved in regulation of the mass of the levator ani muscle in intact rats. M.G.

BIOLOGICAL STUDIES OF SWINE EXPOSED TO 60-HZ ELECTRIC FIELDS. VOLUME 5: HEMATOLOGY AND SERUM CHEMISTRY Final Report
Dec. 1985 127 p
(Contract DE-AC06-76RL-01830)
(DE86-005362; EPRI-EA-4318-VOL-5) Avail: NTIS HC A07/MF A01

The hematologic and serum chemistry responses in three generations of miniature swine chronically exposed to a 30-kV/m, 60-Hz electric field have been assessed in a series of screening experiments. Based on comprehensive analyses and sequential statistical evaluation of the data, there are no significant differences in any hematologic parameters in either the F sub 0 or F sub 1 generations when the exposed and sham exposed groups are compared. In F sub 2 swine, at 42 days of age reticulocyte values were significantly higher in both sexes exposed to the electric field than in the control group. In addition, the exposed males at 42 days had significantly lower values for erythrocytes, hemoglobin and volume of packed red cells than the control males. Other values were comparable between exposed and control groups. Serum chemistry evaluations between exposed and control groups also showed no consistent statistical differences. A few parameters did show occasional differences between groups in the F sub 1 and F sub 2 generations, including: higher levels of urea nitrogen, triglyceride and alkaline phosphatase in exposed F sub 1 piglets; significantly lower serum protein levels in exposed F sub 2 males; and fewer serum globulins in both sexes of the F sub 2 generation. In summary, when hematologic and serum chemistry parameters were compared in exposed and sham-exposed groups of swine, some sporadic effects were evident. These effects, however, failed to replicate consistently at subsequent sampling periods or across generations and were not present as statistical trends when appropriate multivariate analyses were performed. BIOLOGICAL STUDIES OF SWINE EXPOSED TO 60-HZ ELECTRIC FIELDS. VOLUME 6: IMMUNOLOGY Final Report
Dec. 1985 61 p
(Contract DE-AC06-76RL-01830)
(DE86-005363; EPRI-EA-4318-VOL-6) Avail: NTIS HC A04/MF A01

Immunological response in three generations of miniature swine chronically exposed to a 30-kV/m, 60-Hz electric field have been assessed in a series of screening experiments. The study was designed to investigate functional aspects of the humoral and cellular components of the mammalian immune system. Circulating levels of immunoglobulins were measured in parental-generation (F sub 0) sows (0 to 22 months of exposure), first-generation fetuses (F sub 1) at 100 days of gestation, F sub 1 females (0 to 32 months of exposure) and second-generation (F sub 2) weanlings at 1.5 and 6 months of age. No consistent, statistically significant changes in the levels of serum immunoglobins were observed when exposed groups were compared with sham-exposed controls, either within or across generations. An examination of cellular immunity included measurements of the mitogen response of peripheral-blood lymphocytes (PBL), spleen cells and lymph-node cells of F sub 0 sows sacrificed after 100 days of pregnancy, and PBL, spleen cells and thymocytes of F sub 1 fetuses at 100 days of gestation. Mitogen response studies of PBL, spleen cells, thymocytes and lymph-node cells of 42-day-old F sub 1 male weanlings and F sub 2 male and female swine were also conducted. In the statistical comparisons of mitogen-response data obtained for F sub 0 , F sub 1 , and F sub 2 swine, no consistent differences were observed between exposed and matched sham-exposed control groups. These observations indicate that the distribution of cells in the various tissues studied and the responses observed were not altered as a result of exposure to the fields. DOE

EFFECTS OF 60 HZ ELECTRIC FIELD ON OPERANT AND SOCIAL STRESS BEHAVIORS OF NONHUMAN PRIMATES Technical Status Report, Jun. 8 - 2 Aug. 1985
2 Aug. 1985 19 p
(Contract DE-AC02-80RA-50219)
(DE85-016121; DOE/RA-50219/T5) Avail: NTIS HC A02/MF A01

Progress made at calibrating the electric field distribution within and around cages used for behavorial testing of baboons is described. It is concluded that all of the parts of the system are rather constant in their readings. The only component which seems to show appreciable variability is the 4 cm probe. Although the optically coupled 4 cm spherical dipole probe usually performs well, it is becoming apparent that sometimes it can produce misleading results. Although we do not yet understand the situation completely, it appears as though there are at least two variables affecting the probe, battery voltage and humidity. DOE

EFFECTS OF 60 HZ ELECTRIC FIELDS ON OPERANT AND SOCIAL STRESS BEHAVIORS OF NONHUMAN PRIMATES Project Technical Status Report, 23 Nov. 1985 - 17 Jan. 1986
24 Jan. 1986 13 p
(Contract DE-AC02-80RA-50219)
(DE86-005807; DOE/RA-50219/T8) Avail: NTIS HC A02/MF A01

The objective was to investigate, using baboons (superspecies Papio cynocephalus) as surrogates, possible behavioral effects associated with exposure to high intensity 60 Hz electric fields. This program consists of four major projects. The first will evaluate the potential aversive character of exposure to 60 Hz electric fields by determining the threshold intensity which produces avoidance or escape responses. The second project will estimate the threshold intensity for detection of 60 Hz electric fields. The third will assess effects of chronic exposure to 60 Hz electric fields on the performance of two operant conditioning tasks, fixed ratio (FR) and differential reinforcement of low rate responding (DRL). The fourth will investigate the possible stress-inducing effects of chronic exposure to 60 Hz electric fields on the behavior of baboons living in small social groups. DOE

BACTERIAL INACTIVATION BY MEANS OF IONIZING RADIATION
M. S. CHANG, L. H. CHEN, and Y. K. FU Nov. 1984 19 p In CHINESE and ENGLISH
(DE86-901038; INER-0575) Avail: NTIS (US Sales Only) HC A02/MF A01

Spores of Bacillus subtillis and Escherichia coli are the most common air-borne bacteria. B. subtilis is radiation resistant and is commonly used as the test strain for routine control of heat sterilization. A study of surviving fractions of spores of B. subtilis, E. coli, and Streptococcus faecium A21 irradiated by (60)Co gamma-rays was carried out to determine the suitable dose for medical sterilization by irradiation. EFFECTS OF LUNAR SOIL, ZAGAMI METEORITE, AND OCEAN RIDGE BASALT ON THE EXCRETION OF ITOIC ACID, A SIDEROPHORE, AND COPROPORPHYRIN BY BACILLUS SUBTILIS
T. ITO *In* NASA. Johnson Space Center NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1985 12 p Jul. 1986
Avail: NTIS HC A99/MF E03 CSCL 06C

Samples of lunar soil (10084,151), Zagami meteorite, postulated to be ejected from Mars, and ocean ridge basalt, the most abundant volcanic rock on earth, all completely inhibited the excretion of itoic acid and of coproporphyrin by Bacillus subtilis, a common airborne bacterium. Since such inhibition has been known to occur only under iron rich growth conditions(the excretion of these compounds occurs under iron deficient growth conditions), the result indicated that the organism was capable of extracting iron quite readily from these materials. A sample of synthetic ilmenite completely failed to inhibit the excretion of coproporphyrin, and inhibited the excretion of itoic acid only slightly. The result suggested that much of the iron extracted by the organism must have come from iron sources other than ilmenite,such as pyroxenes and olivines,in these natural materials tested. Author

CYTOGENETIC ANALYSES OF PERIPHERAL LYMPHOCYTES SUBJECTED TO SIMULATED SOLAR FLARE RADIATION
H. M. PRICHARD *In* NASA. Johnson Space Center NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1985 9 p Jul. 1986
Avail: NTIS HC A99/MF E03 CSCL 06R

Solar flare protons share many radiological health characteristics of the inner Van Allen Belt protons, and both types of radiation pose serious dangers to a number of missions planned. It is appropriate to evaluate crew dose determination procedures in terms of the type of radiation responsible for the major part of the projected exposure, i.e., protons in the neighborhood of 100 MeV. Monitoring chromosome abnormalities in peripheral lymphocytes is one method to determine an individual's accumulated radiation dosage. Cell culture and harvest is a relatively simple procedure and is well within the capabilities of a station health facility, but the evaluation of prepared microscopic slides is a time consuming and subjective procedure. This project is part of an effort to demonstrate the utility of automated image processing and evaluation procedures in expediting dose evaluation. The initial goal of this project is to produce a set of reference chromosome spreads produced from control lymphocytes and from lymphocytes exposed in whole blood to protons or gamma rays. The results of manual and automated aberration scoring will ultimately be compared to test for systematic differences between the two evaluation procedures and between the two radiation qualities. Proton irradiations are performed at the University of Texas Health Science Center at Houston Cyclotron Facility. Proton dosimetry is supplemented by TLD packets from and by assay of short-lived proton activation products in the irradiation blood samples. Author

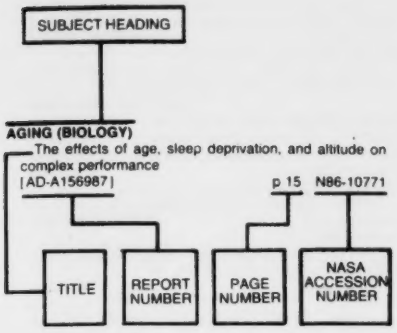
SELECTION OF AN APPROPRIATE ANIMAL MODEL FOR STUDY OF BONE LOSS IN WEIGHTLESSNESS
I. WOLINSKY *In* NASA. Johnson Space Center NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1985 7 p Jul. 1986
Avail: NTIS HC A99/MF E03 CSCL 06S

Prolonged weightlessness in space flight results in a slow progressive demineralization of bone accompanied by an increased calcium output in the urine resulting in negative calcium balances. This possibly irreversible bone loss may constitute a serious limiting factor to long duration manned space flight. A number of preventative measures have been suggested, i.e., exercise during flight, dietary calcium supplements, use of specific prophylactic drugs. In order to facilitate research in these areas it is necessary to develop appropriate ground-based animal models that simulate the human condition of osteoporsis. An appropriate animal model would permit bone density studies, calcium balance studies, biochemical analyses, ground-based simulation models of weightlessness (bed rest, restraint, immobilization) and the planning of inflight experiments. Several animal models have been proposed in the biomedical research literature, but have inherent deficiencies. The purpose of this project was to evaluate models in the literature and determine which of these most closely simulates the phenomenon of bone loss in humans with regard to growth, bone remodeling, structural, chemical and mineralization similarities to human. This was accomplished by a comprehensive computer assisted literature search and report. Three animal models were examined closely for their relative suitability: the albino rat, monkey, and Beagle. Author

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

[AD-A166887] p 393 N86-31207

CHLORELLA
Advantages of the gas exchange approach to microbiological studies
[AD-A166887] p 393 N86-31207

CINEMATOGRAPHY
Sensitivity to visual motion in statistically defined displays
[AD-A167291] p 405 N86-31217

CIRCADIAN RHYTHMS
Digestive system rhythms and the body's biological clock p 391 A86-43676
Circadian variations of systolic time intervals p 394 A86-44087
Multiparameter data acquisition systems for studies of Circadian rhythms
[DE86-004041] p 398 N86-30308

CLINICAL MEDICINE
Canadian forces approach to aircrew medical selection p 399 N86-30311
Cytogenetic analyses of peripheral lymphocytes subjected to simulated solar flare radiation p 412 N86-31431

CLOSED ECOLOGICAL SYSTEMS
Defining reclaimed water potability requirements p 410 N86-31422

COCKPITS
Aircrew aspects of United Stated future fighter aircraft p 398 N86-30310

COGNITION
The importance of specialized cognitive function in the selection of military pilots
[AD-A165889] p 404 N86-30330

COGNITIVE PSYCHOLOGY
Cognitive aspects of command and control
[IZF-1986-2] p 405 N86-30336

COLD ACCLIMATIZATION
The suppressive effect of carbon dioxide on the activation of cold receptors in the nasal cavity of cats p 392 A86-45319
Human vascular fluid responses to cold stress are not altered by cold acclimation
[AD-A165869] p 398 N86-30305

COLOR
Sensitivity to color contrasts and the selection of navigator personnel p 400 N86-30318

COLOR CODING
The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334

COMBAT
Simulated aerial combat maneuvering tolerance and physical conditioning - Current status p 396 A86-44097
The use of ECG changes caused by acceleration as tolerance predicition factors p 399 N86-30316
Visual capabilities related to fighter aircrew performance in the F-14 and adversary aircraft p 400 N86-30320
Vision test battery threshold and response time as predictors of air-to-air visual target acquisition in F-14 and adversary aircraft p 400 N86-30321

COMMAND AND CONTROL
Cognitive aspects of command and control
[IZF-1986-2] p 405 N86-30336

COMPUTER GRAPHICS
The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334

COMPUTER PROGRAMS
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218

COMPUTER TECHNIQUES
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319

COMPUTERIZED SIMULATION
Novel architectures for image processing based on computer simulation and psychophysical studies of human visual cortex
[AD-A166222] p 404 N86-30333

COMPUTERS
Making the human-machine interface responsive to many classes of users
[DE86-003453] p 409 N86-31222

CONDITIONING (LEARNING)
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-005807] p 411 N86-30347

CONTRACTION
The contractile function and the energy metabolism of the myocardium under emotional stress and during adaptation of animals to short stress effects p 392 A86-45322

CONTROL SYSTEMS DESIGN
Environmental control and life support systems p 406 A86-44534
A discrete control model of PLANT p 408 N86-31220

COOLING
Development of thermoelectric water heating-cooling devices
[AD-A166949] p 409 N86-31221

CORONARY CIRCULATION
Changes in pericardial microcirculation in dogs during adaptation to static muscle loads p 392 A86-45321

CORTICOSTEROIDS
A possible role for endogenous glucocorticoids in orchiectomy-induced atrophy of the rat levator ani muscle: Studies with RU38486, a potent and selective antiglucocorticoid
[NASA-CR-177029] p 411 N86-30343

CREW WORKSTATIONS
Intelligent crew workstations p 406 A86-44532

CULTURE TECHNIQUES
Effects of simulated weightlessness on meiosis. Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342
Advantages of the gas exchange approach to microbiological studies
[AD-A166887] p 393 N86-31207

CURVATURE
Fluid dynamic study in a femoral artery branch casting of man with upstream main lumen curvature for steady flow p 397 A86-45254

CYTOLOGY
The photobiological aspects of radiation damage in cells --- Russian book p 392 A86-44295

D

DAMAGE ASSESSMENT
Assessing possible damage due to radio frequency radiation
[AD-A166913] p 402 N86-31214

DATA ACQUISITION
Multiparameter data acquisition systems for studies of Circadian rhythms
[DE86-004041] p 398 N86-30308

DECISION MAKING
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218
Representation for closed form significance testing in VL1 p 408 N86-31219
A discrete control model of PLANT p 408 N86-31220

DECLINATION
Preferred declination of the line of sight p 406 A86-45014

DECOMPRESSION SICKNESS
How well mixed is inert gas in tissues? p 391 A86-44197
Hypobaric training of flight personnel without compromising quality of life p 401 N86-30327

DENSITY MEASUREMENT
Continuous blood densitometry - Fluid shifts after graded hemorrhage in animals p 392 A86-45251

DESIGN ANALYSIS
An updated model for a Space Station Health Maintenance Facility
[AIAA PAPER 86-2303] p 397 A86-46938

DETECTION
Detection of system failure by human operator. I - The case of monitor p 403 A86-43535

DIATOMIC MOLECULES
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354

DIGESTIVE SYSTEM
Digestive system rhythms and the body's biological clock p 391 A86-43676
The role of gravity in producing digestive system changes p 391 A86-43677

DISPLAY DEVICES
Visual accommodation and virtual image displays - Target detection and recognition p 406 A86-45015
The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334

E

EAR PROTECTORS
Methods of measuring the attenuation of hearing protection devices p 406 A86-45073

EARTH ATMOSPHERE
The viability with respect to temperature, of micro-organisms incident on the earth's atmosphere p 410 A86-44350

ECHOCARDIOGRAPHY
Selection and medical testing of Mirage 2000 pilots: Report of echocardiography p 399 N86-30314

EFFERENT NERVOUS SYSTEMS
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216

ELECTRIC FIELDS
Biological studies of swine exposed to 60-Hz electric fields. Volume 5: Hematology and serum chemistry
[DE86-005362] p 411 N86-30344
Biological studies of swine exposed to 60-Hz electric fields. Volume 6: Immunology
[DE86-005363] p 411 N86-30345
Effects of 60 Hz electric field on operant and social stress behaviors of nonhuman primates
[DE85-016121] p 411 N86-30346
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-005807] p 411 N86-30347
Physical interaction of humans and animals with power-frequency electric and magnetic fields
[DE86-007734] p 402 N86-31215

ELECTRIC POTENTIAL
Effects of 60 Hz electric field on operant and social stress behaviors of nonhuman primates
[DE85-016121] p 411 N86-30346

ELECTROCARDIOGRAPHY
The inverse problem in electrocardiography - A model study of the effects of geometry and conductivity parameters on the reconstruction of epicardial potentials p 394 A86-43750
Continuous ECG monitoring of Mirage 2000 pilots (comparison with Mirage 3 and F1 pilots) p 399 N86-30315

ELECTRONS
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209

EMERGENCY LIFE SUSTAINING SYSTEMS
Air ambulance regulations - A model p 405 A86-44094

EMOTIONAL FACTORS
Theoretical principles underlying the evaluation, control, and correction of the impact of emotions on cosmonaut activity p 403 A86-44601

ENVIRONMENTAL CONTROL
Environmental control and life support systems p 406 A86-44534
Environmental control/life support system for Space Station p 407 A86-45692
Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943

EPICARDIUM
The inverse problem in electrocardiography - A model study of the effects of geometry and conductivity parameters on the reconstruction of epicardial potentials p 394 A86-43750

EPILEPSY
The effects of cerebral hypoxia and hyperventilatory hypocapnia on the epileptiform activity in the cerebral cortex of cats p 392 A86-45318

EQUIPMENT SPECIFICATIONS
Effects of simulated weightlessness on meiosis. Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342

ERROR ANALYSIS
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224

ERYTHROCYTES
The content of lactic acid in the blood and erythropoiesis during hypoxia p 393 A86-45324
Induced erythrocythemia and maximal aerobic power: An examination of modifying factors
[AD-A166522] p 402 N86-31212

ESCHERICHIA
Bacterial inactivation by means of ionizing radiation
[DE86-901038] p 412 N86-30348

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332

EXCRETION
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421

EXERCISE PHYSIOLOGY

EXERCISE PHYSIOLOGY
Physical training and +Gz tolerance reevaluated
p 396 A86-44096
Simulated aerial combat maneuvering tolerance and physical conditioning - Current status
p 396 A86-44097
Effect of head-out water immersion on response to exercise training p 396 A86-44194
EXPERT SYSTEMS
Evaluating space station applications of automation and robotics technologies from a human productivity point of view p 409 N86-31412
EXPOSURE
Biological studies of swine exposed to 60-Hz electric fields. Volume 6: Immunology
[DE86-005363] p 411 N86-30345
EXTRATERRESTRIAL LIFE
The question of life on Mars p 410 A86-43927
EXTRAVEHICULAR ACTIVITY
Advanced space suit development for future on-orbit operations
[AIAA PAPER 86-2310] p 407 A86-46941
Zero-G simulation verifies EVA servicing of space station modules
[AIAA PAPER 86-2312] p 407 A86-46942

F

F-14 AIRCRAFT
Visual capabilities related to fighter aircrew performance in the F-14 and adversary aircraft p 400 N86-30320
F-16 AIRCRAFT
Systematic radiographic examination of the spine for selection of F-16 pilots: A preliminary report
p 401 N86-30323
Treadmill spiroergometry in the selection and screening of high-performance combat aircraft pilots in the Belgian Air Force p 401 N86-30325
FACILITIES
An updated model for a Space Station Health Maintenance Facility
[AIAA PAPER 86-2303] p 397 A86-46938
FATIGUE (BIOLOGY)
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332
FAULT TREES
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224
FERTILIZATION
Effects of simulated weightlessness on meiosis. Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342
FETUSES
Biological studies of swine exposed to 60-Hz electric fields. Volume 6: Immunology
[DE86-005363] p 411 N86-30345
FIGHTER AIRCRAFT
G-induced loss of consciousness - Combat aircraft pilots head for trouble p 396 A86-44814
Medical Selection and Physiological Training of Future Fighter Aircrew
[AGARD-CP-396] p 398 N86-30309
Aircrew aspects of United Stated future fighter aircraft
p 398 N86-30310
Medical selection and physiological training of fighter pilots: A 1985 perspective and overview
p 399 N86-30312
Selection and medical testing of Mirage 2000 pilots: Report of echocardiography p 399 N86-30314
Continuous ECG monitoring of Mirage 2000 pilots (comparison with Mirage 3 and F1 pilots)
p 399 N86-30315
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319
Vision test battery threshold and response time as predictors of air-to-air visual target acquisition in F-14 and adversary aircraft p 400 N86-30321
The vertebral column: Selection and aptitude of combat aircraft pilots of the future p 400 N86-30322
Relationship of cardiopulmonary fitness to flight performance in tactical aviation p 401 N86-30326
FLIGHT CONTROL
Aircrew aspects of United Stated future fighter aircraft
p 398 N86-30310
FLIGHT CREWS
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779
Aircrew aspects of United Stated future fighter aircraft
p 398 N86-30310
Canadian forces approach to aircrew medical selection p 399 N86-30311
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319
Visual capabilities related to fighter aircrew performance in the F-14 and adversary aircraft p 400 N86-30320
Hypobaric training of flight personnel without compromising quality of life p 401 N86-30327
Attention tasks and their relation to aging and flight experience
[IZF-1986-4] p 405 N86-30337
FLIGHT FITNESS
Canadian forces approach to aircrew medical selection p 399 N86-30311
FLIGHT SAFETY
Inflight loss of consciousness - A first look at the U.S. Navy experience p 396 A86-44780
FLIGHT SIMULATION
Simulated aerial combat maneuvering tolerance and physical conditioning - Current status
p 396 A86-44097
FLIGHT TRAINING
The significance of recurrent childhood respiratory disorders in flight training applicants p 395 A86-44095
Cardiovascular standards for selection and retention of high performance pilots in the USAF: Perspectives for the next decade p 399 N86-30313
FLUID DYNAMICS
Fluid dynamic study in a femoral artery branch casting of man with upstream main lumen curvature for steady flow p 397 A86-45254
FOCUSING
Enhanced detection in the aperture of focal attention during simple discrimination tasks p 403 A86-45955

G

GALACTIC NUCLEI
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354
GAMMA RAYS
Bacterial inactivation by means of ionizing radiation
[DE86-901038] p 412 N86-30348
GAS EXCHANGE
How well mixed is inert gas in tissues?
p 391 A86-44197
Advantages of the gas exchange approach to microbiological studies
[AD-A166887] p 393 N86-31207
GEOGRAPHY
The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334
GRAPH THEORY
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208
GRAVITATIONAL EFFECTS
The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303
Medical Selection and Physiological Training of Future Fighter Aircrew
[AGARD-CP-396] p 398 N86-30309
Medical selection and physiological training of fighter pilots: A 1985 perspective and overview
p 399 N86-30312
Effects of simulated weightlessness on meiosis. Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342
GRAVITATIONAL PHYSIOLOGY
The role of gravity in producing digestive system changes p 391 A86-43677
Single sinusoids compared with a multiple-sinusoids technique for evaluating horizontal semicircular canal function p 395 A86-44089
Physical training and +Gz tolerance reevaluated
p 396 A86-44096
Simulated aerial combat maneuvering tolerance and physical conditioning - Current status
p 396 A86-44097
Effect of head-out water immersion on response to exercise training p 396 A86-44194
Human factors problems in the tactical air command
p 396 A86-44778
G-induced loss of consciousness - Combat aircraft pilots head for trouble p 396 A86-44814

H

HEALTH PHYSICS
An updated model for a Space Station Health Maintenance Facility
[AIAA PAPER 86-2303] p 397 A86-46938
HEARING
Methods of measuring the attenuation of hearing protection devices p 406 A86-45073
HEART FUNCTION
The possible involvement of PGI2 in the PEEP-induced changes in cardiac output and blood pressure
p 395 A86-44091
The contractile function and the energy metabolism of the myocardium under emotional stress and during adaptation of animals to short stress effects
p 392 A86-45322
Selection and medical testing of Mirage 2000 pilots: Report of echocardiography p 399 N86-30314
The use of ECG changes caused by acceleration as tolerance predicition factors p 399 N86-30316
HEART RATE
Circadian variations of systolic time intervals
p 394 A86-44087
HEAT TRANSFER
The effect of high temperature on the heat exchange and the nutritional status of pilots p 397 A86-45325
HEATING EQUIPMENT
Development of thermoelectric water heating-cooling devices
[AD-A166949] p 409 N86-31221
HELMETS
The vertebral column: Selection and aptitude of combat aircraft pilots of the future p 400 N86-30322
HEMATOLOGY
Biological studies of swine exposed to 60-Hz electric fields. Volume 5: Hematology and serum chemistry
[DE86-005362] p 411 N86-30344
Induced erythrocythemia and maximal aerobic power: An examination of modifying factors
[AD-A166522] p 402 N86-31212
HEMATOPOIESIS
The content of lactic acid in the blood and erythropoiesis during hypoxia p 393 A86-45324
HEMODYNAMIC RESPONSES
Changes in pericardial microcirculation in dogs during adaptation to static muscle loads p 392 A86-45321
The effect of hypoxia on the dynamics of the peripheral lymph flow p 393 A86-45323
HEMODYNAMICS
Fluid dynamic study in a femoral artery branch casting of man with upstream main lumen curvature for steady flow p 397 A86-45254
HEMORRHAGES
Continuous blood densitometry - Fluid shifts after graded hemorrhage in animals p 392 A86-45251
HIGHLY MANEUVERABLE AIRCRAFT
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779
HORMONES
A possible role for endogenous glucocorticoids in orchiectomy-induced atrophy of the rat levator ani muscle: Studies with RU38486, a potent and selective antiglucocorticoid
[NASA-CR-177029] p 411 N86-30343
HUMAN BEINGS
Spatiotemporal characteristics of visual localization
[AD-A166097] p 404 N86-30331
Physical interaction of humans and animals with power-frequency electric and magnetic fields
[DE86-007734] p 402 N86-31215
HUMAN CENTRIFUGES
Assisted positive pressure breathing and modified anti-acceleration suit filling tested up to 9 G in a human centrifuge, Karolinska Institute
[FOA-C-50038-H1] p 408 N86-30341
HUMAN FACTORS ENGINEERING
Human factors problems in the tactical air command
p 396 A86-44778
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779
Medical selection and physiological training of fighter pilots: A 1985 perspective and overview
p 399 N86-30312
Activities report in perception research
[IPO-19-1984] p 405 N86-30335
Human factors activities in teleoperator development at the Oak Ridge National Laboratory
[DE86-005160] p 408 N86-30340
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218
A discrete control model of PLANT
p 408 N86-31220

Making the human-machine interface responsive to many classes of users
[DE86-003453] p 409 N86-31222
Basic human factors considerations
[DE86-008181] p 409 N86-31223
Human factors management
[DE86-008184] p 409 N86-31226
Evaluating space station applications of automation and robotics technologies from a human productivity point of view p 409 N86-31412

HUMAN PERFORMANCE
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332
The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334
Activities report in perception research
[IPO-19-1984] p 405 N86-30335
Attention tasks and their relation to aging and flight experience
[IZF-1986-4] p 405 N86-30337
Induced erythrocythemia and maximal aerobic power: An examination of modifying factors
[AD-A166522] p 402 N86-31212
Basic human factors considerations
[DE86-008181] p 409 N86-31223
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224
Process of task analysis
[DE86-008183] p 409 N86-31225
Human factors management
[DE86-008184] p 409 N86-31226

HUMAN RELATIONS
Implications of privacy needs and interpersonal distancing mechanisms for space station design
[NASA-CR-176938] p 408 N86-30338

HUMIDITY
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
Effects of 60 Hz electric field on operant and social stress behaviors of nonhuman primates
[DE85-016121] p 411 N86-30346

HYDROXYL COMPOUNDS
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960

HYPEROXIA
Solute conductance of blood-gas barrier in hamsters exposed to hyperoxia p 391 A86-44195

HYPERTHERMIA
The effect of high temperature on the heat exchange and the nutritional status of pilots p 397 A86-45325

HYPERVELOCITY IMPACT
The viability with respect to temperature, of micro-organisms incident on the earth's atmosphere p 410 A86-44358

HYPERVENTILATION
The effects of cerebral hypoxia and hyperventilatory hypocapnia on the epileptiform activity in the cerebral cortex of cats p 392 A86-45318

HYPOBARIC ATMOSPHERES
Alteration of rat brain catecholamine levels under hypoxia p 391 A86-43540
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307

HYPOCAPNIA
The effects of cerebral hypoxia and hyperventilatory hypocapnia on the epileptiform activity in the cerebral cortex of cats p 392 A86-45318

HYPODYNAMIA
Models of disuse - A comparison of hindlimb suspension and immobilization p 391 A86-44196

HYPOTHALAMUS
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216

HYPOTHERMIA
The suppressive effect of carbon dioxide on the activation of cold receptors in the nasal cavity of cats p 392 A86-45319
Intrinsic alteration of the reactive properties of arteries during hypothermia
[AD-A166523] p 402 N86-31213

HYPOVOLEMIA
Continuous blood densitometry - Fluid shifts after graded hemorrhage in animals p 392 A86-45251

HYPOXIA
Alteration of rat brain catecholamine levels under hypoxia p 391 A86-43540
The effects of cerebral hypoxia and hyperventilatory hypocapnia on the epileptiform activity in the cerebral cortex of cats p 392 A86-45318
The effect of hypoxia on the dynamics of the peripheral lymph flow p 393 A86-45323
The content of lactic acid in the blood and erythropoiesis during hypoxia p 393 A86-45324
Hypobaric training of flight personnel without compromising quality of life p 401 N86-30327

I

ILLUSIONS
Sensitivity to visual motion in statistically defined displays
[AD-A167291] p 405 N86-31217

IMAGE CONTRAST
Sensitivity to color contrasts and the selection of navigator personnel p 400 N86-30318

IMAGE PROCESSING
Novel architectures for image processing based on computer simulation and psychophysical studies of human visual cortex
[AD-A166222] p 404 N86-30333

IMMOBILIZATION
Models of disuse - A comparison of hindlimb suspension and immobilization p 391 A86-44196
The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303

IMMUNITY
Flow cytometry analysis of hormone receptors on human peripheral blood mononuclear cells to identify stress-induced neuroendocrine effects p 403 N86-31428

IMMUNOLOGY
Biological studies of swine exposed to 60-Hz electric fields. Volume 6: Immunology
[DE86-005363] p 411 N86-30345

INDEXES (RATIOS)
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208

INFORMATION FLOW
A discrete control model of PLANT p 408 N86-31220

INFORMATION RETRIEVAL
Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328

INFRARED SOURCES (ASTRONOMY)
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354

INJURIES
Systematic radiographic examination of the spine for selection of F-16 pilots: A preliminary report p 401 N86-30323

INSERTION LOSS
Methods of measuring the attenuation of hearing protection devices p 406 A86-45073

INTERFACES
Impact of automation on Space Station MMI design --- Man-Machine Interface
[AIAA PAPER 86-2316] p 407 A86-46944
Advanced operator/system interface concepts for the Space Station
[AIAA PAPER 86-2317] p 407 A86-46945

INTERSTELLAR MATTER
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354

INTERVALS
Circadian variations of systolic time intervals p 394 A86-44087

L

LACTIC ACID
The content of lactic acid in the blood and erythropoiesis during hypoxia p 393 A86-45324

LASER APPLICATIONS
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209

LASER SPECTROSCOPY
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209

LEARNING
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216

LIFE SCIENCES
Space Station - Life sciences
[AIAA PAPER 86-2346] p 393 A86-46960
Life Sciences Space Station planning document: A reference payload for the Life Sciences Research Facility
[NASA-TM-89188] p 393 N86-30302

LIFE SUPPORT SYSTEMS
Environmental control and life support systems p 406 A86-44534
Environmental control/life support system for Space Station p 407 A86-45692
Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943
Defining reclaimed water potability requirements p 410 N86-31422

LIGANDS
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960

LIMBS (ANATOMY)
Models of disuse - A comparison of hindlimb suspension and immobilization p 391 A86-44196

LINE OF SIGHT
Preferred declination of the line of sight p 406 A86-45014

LONG DURATION SPACE FLIGHT
The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303
Analysis of nystagmus response to a pseudorandom velocity input p 402 N86-31426
Selection of an appropriate animal model for study of bone loss in weightlessness p 412 N86-31436

LONG TERM EFFECTS
The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303
Multiparameter data acquisition systems for studies of Circadian rhythms
[DE86-004041] p 398 N86-30308

LOW TEMPERATURE
Intrinsic alteration of the reactive properties of arteries during hypothermia
[AD-A166523] p 402 N86-31213

LUNAR SOIL
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421

LYMPH
The effect of hypoxia on the dynamics of the peripheral lymph flow p 393 A86-45323

M

MAGNETIC FIELDS
Physical interaction of humans and animals with power-frequency electric and magnetic fields
[DE86-007734] p 402 N86-31215

MAINTENANCE
Human factors activities in teleoperator development at the Oak Ridge National Laboratory
[DE86-005160] p 408 N86-30340

MALES
Metabolic changes following eccentric exercise in trained and untrained men
[AD-A166521] p 402 N86-31211

MALFUNCTIONS
Flow cytometry analysis of hormone receptors on human peripheral blood mononuclear cells to identify stress-induced neuroendocrine effects p 403 N86-31428

MAN MACHINE SYSTEMS
Detection of system failure by human operator. I - The case of monitor p 403 A86-43535
Intelligent crew workstations p 406 A86-44532
Visual accommodation and virtual image displays - Target detection and recognition p 406 A86-45015
Experimental estimate of the parameters of a stochastic model of a human operator sensor system p 407 A86-45117
Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943
Impact of automation on Space Station MMI design --- Man-Machine Interface
[AIAA PAPER 86-2316] p 407 A86-46944
Advanced operator/system interface concepts for the Space Station
[AIAA PAPER 86-2317] p 407 A86-46945
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218
A discrete control model of PLANT p 408 N86-31220
Making the human-machine interface responsive to many classes of users
[DE86-003453] p 409 N86-31222

MANNED SPACE FLIGHT
Analysis of nystagmus response to a pseudorandom velocity input p 402 N86-31426

Selection of an appropriate animal model for study of bone loss in weightlessness p 412 N86-31436
MARS (PLANET)
The question of life on Mars p 410 A86-43927
MATHEMATICAL MODELS
An updated model for a Space Station Health Maintenance Facility
[AIAA PAPER 86-2303] p 397 A86-46938
Physical interaction of humans and animals with power-frequency electric and magnetic fields
[DE86-007734] p 402 N86-31215
A discrete control model of PLANT p 408 N86-31220
MEDICAL ELECTRONICS
Specifications Physiological Monitoring System
[NASA-CR-171926] p 408 N86-30339
MEDICAL EQUIPMENT
Specifications Physiological Monitoring System
[NASA-CR-171926] p 408 N86-30339
MEDICAL SERVICES
Air ambulance regulations - A model p 405 A86-44094
MEMORY
Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328
MENTAL PERFORMANCE
Review on secondary task technique for workload assessment Some consideration of secondary task paradigms and an assessment model p 403 A86-43539
METABOLISM
Metabolic changes following eccentric exercise in trained and untrained men
[AD-A166521] p 402 N86-31211
METEORITES
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421
MICE
Effects of simulated weightlessness on meiosis, Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342
MICROBIOLOGY
Advantages of the gas exchange approach to microbiological studies
[AD-A166887] p 393 N86-31207
MICROORGANISMS
The viability with respect to temperature, of micro-organisms incident on the earth's atmosphere p 410 A86-44358
MICROWAVE EMISSION
Radiofrequencies and microwaves - Radiation safety of the operator p 397 A86-46270
MICROWAVES
Assessing possible damage due to radio frequency radiation
[AD-A166913] p 402 N86-31214
MILKY WAY GALAXY
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354
MINERALS
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960
MIRAGE AIRCRAFT
Physical training of Mirage 2000 pilots p 401 N86-30324
MIXING
How well mixed is inert gas in tissues? p 391 A86-44197
MOLECULAR BIOLOGY
The photobiological aspects of radiation damage in cells — Russian book p 392 A86-44295
The prediction of biological activity using molecular connectivity indices
[AD-A166586] p 394 N86-31208
MOLECULAR STRUCTURE
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208
MONITORS
Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328
MONTE CARLO METHOD
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218
MOTION PERCEPTION
Sensitivity to visual motion in statistically defined displays
[AD-A167291] p 405 N86-31217
MOTION SICKNESS
Analysis of nystagmus response to a pseudorandom velocity input p 402 N86-31426
MOTION SICKNESS DRUGS
Naloxone enhances motion sickness - Endorphins implicated p 395 A86-44088
MUSCLES
A possible role for endogenous glucocorticoids in orchiectomy-induced atrophy of the rat levator ani muscle: Studies with RU38486, a potent and selective antiglucocorticoid
[NASA-CR-177029] p 411 N86-30343
Intrinsic alteration of the reactive properties of arteries during hypothermia
[AD-A166523] p 402 N86-31213
MUSCULAR FUNCTION
Inhibitory effects of combined agonist and antagonist muscle vibration on H-reflex in man p 395 A86-44090
Models of disuse - A comparison of hindlimb suspension and immobilization p 391 A86-44196
Changes in pericardial microcirculation in dogs during adaptation to static muscle loads p 392 A86-45321
MUSCULOSKELETAL SYSTEM
Flow cytometry analysis of hormone receptors on human peripheral blood mononuclear cells to identify stress-induced neuroendocrine effects p 403 N86-31428
MYOCARDIUM
The contractile function and the energy metabolism of the myocardium under emotional stress and during adaptation of animals to short stress effects p 392 A86-45322

N

NAVIGATORS
Sensitivity to color contrasts and the selection of navigator personnel p 400 N86-30318
NAVY
Relationship of cardiopulmonary fitness to flight performance in tactical aviation p 401 N86-30326
Hypobaric training of flight personnel without compromising quality of life p 401 N86-30327
NEBULAE
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354
NEUROMUSCULAR TRANSMISSION
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216
NEURONS
Correlations between the levels of cerebral blood flow and cerebrovascular reactivity and the functional state of brain tissue p 392 A86-45320
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216
NEUROPHYSIOLOGY
Naloxone enhances motion sickness - Endorphins implicated p 395 A86-44088
The effects of cerebral hypoxia and hyperventilatory hypocapnia on the epileptiform activity in the cerebral cortex of cats p 392 A86-45318
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216
NOISE REDUCTION
Methods of measuring the attenuation of hearing protection devices p 406 A86-45073
NOSE (ANATOMY)
The suppressive effect of carbon dioxide on the activation of cold receptors in the nasal cavity of cats p 392 A86-45319
NUCLEAR FUEL REPROCESSING
Human factors activities in teleoperator development at the Oak Ridge National Laboratory
[DE86-005160] p 408 N86-30340
NUCLEOTIDES
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960
NUTRITIONAL REQUIREMENTS
The effect of high temperature on the heat exchange and the nutritional status of pilots p 397 A86-45325

O

OCULOMOTOR NERVES
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319
OPERATOR PERFORMANCE
Detection of system failure by human operator. I - The case of monitor p 403 A86-43535
Review on secondary task technique for workload assessment Some consideration of secondary task paradigms and an assessment model p 403 A86-43539
Experimental estimate of the parameters of a stochastic model of a human operator sensor system p 407 A86-45117
OPHTHALMOLOGY
Sensitivity to color contrasts and the selection of navigator personnel p 400 N86-30318
OPTICAL FILTERS
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329
ORBITAL SERVICING
Advanced space suit development for future on-orbit operations
[AIAA PAPER 86-2310] p 407 A86-46941
ORBITAL SPACE STATIONS
Zero-G simulation verifies EVA servicing of space station modules
[AIAA PAPER 86-2312] p 407 A86-46942
OXYGEN
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
OXYGEN BREATHING
The effect of breathing elevated CO2 gas mixtures on tracking performance, blood pressure, and subjective tolerance at 1Gz
[AD-A165974] p 401 N86-31210

P

PAIN
Low back pain in pilots p 395 A86-44092
PARAMETER IDENTIFICATION
Experimental estimate of the parameters of a stochastic model of a human operator sensor system p 407 A86-45117
PERCEPTION
Experimental estimate of the parameters of a stochastic model of a human operator sensor system p 407 A86-45117
Activities report in perception research
[IPO-19-1984] p 405 N86-30335
PERFORMANCE PREDICTION
Detection of system failure by human operator. I - The case of monitor p 403 A86-43535
PERFORMANCE TESTS
Zero-G simulation verifies EVA servicing of space station modules
[AIAA PAPER 86-2312] p 407 A86-46942
PERIPHERAL CIRCULATION
The effect of hypoxia on the dynamics of the peripheral lymph flow p 393 A86-45323
PERMEABILITY
Solute conductance of blood-gas barrier in hamsters exposed to hyperoxia p 391 A86-44195
PERSONNEL
Process of task analysis
[DE86-008183] p 409 N86-31225
Human factors management
[DE86-008184] p 409 N86-31226
PERSONNEL MANAGEMENT
Human factors management
[DE86-008184] p 409 N86-31226
PERSONNEL SELECTION
Canadian forces approach to aircrew medical selection p 399 N86-30311
Cardiovascular standards for selection and retention of high performance pilots in the USAF: Perspectives for the next decade p 399 N86-30313
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
Sensitivity to color contrasts and the selection of navigator personnel p 400 N86-30318
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319
PHARMACOLOGY
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208
PHOTODISSOCIATION
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209
PHYSICAL CHEMISTRY
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208
PHYSICAL EXAMINATIONS
Canadian forces approach to aircrew medical selection p 399 N86-30311
Medical selection and physiological training of fighter pilots: A 1985 perspective and overview p 399 N86-30312

Cardiovascular standards for selection and retention of high performance pilots in the USAF: Perspectives for the next decade p 399 N86-30313
Selection and medical testing of Mirage 2000 pilots: Report of echocardiography p 399 N86-30314
Systematic radiographic examination of the spine for selection of F-16 pilots: A preliminary report p 401 N86-30323
Treadmill spiroergometry in the selection and screening of high-performance combat aircraft pilots in the Belgian Air Force p 401 N86-30325

PHYSICAL EXERCISE
Physical training and +Gz tolerance reevaluated p 396 A86-44096
Metabolic changes following eccentric exercise in trained and untrained men [AD-A166521] p 402 N86-31211

PHYSICAL FITNESS
Medical Selection and Physiological Training of Future Fighter Aircrew [AGARD-CP-396] p 398 N86-30309
Physical training of Mirage 2000 pilots p 401 N86-30324
Relationship of cardiopulmonary fitness to flight performance in tactical aviation p 401 N86-30326
Metabolic changes following eccentric exercise in trained and untrained men [AD-A166521] p 402 N86-31211
Induced erythrocythemia and maximal aerobic power: An examination of modifying factors [AD-A166522] p 402 N86-31212

PHYSIOCHEMISTRY
Naloxone enhances motion sickness - Endorphins implicated p 395 A86-44088
The contractile function and the energy metabolism of the myocardium under emotional stress and during adaptation of animals to short stress effects p 392 A86-45322

PHYSIOLOGICAL ACCELERATION
Single sinusoids compared with a multiple-sinusoids technique for evaluating horizontal semicircular canal function p 395 A86-44089

PHYSIOLOGICAL EFFECTS
Inhibitory effects of combined agonist and antagonist muscle vibration on H-reflex in man p 395 A86-44090
The temporal response of bone to unloading [NASA-TM-89228] p 397 N86-30303
Aircrew aspects of United Stated future fighter aircraft p 398 N86-30310
A possible role for endogenous glucocorticoids in orchiectomy-induced atrophy of the rat levator ani muscle: Studies with RU38486, a potent and selective antiglucocorticoid [NASA-CR-177029] p 411 N86-30343
Analysis of nystagmus response to a pseudorandom velocity input p 402 N86-31426

The importance of specialized cognitive function in the selection of military pilots [AD-A165889] p 404 N86-30330

PILOT TRAINING
The significance of recurrent childhood respiratory disorders in flight training applicants p 395 A86-44095
The importance of specialized cognitive function in the selection of military pilots [AD-A165889] p 404 N86-30330

PNEUMOTHORAX
Diffuse pulmonary ossification and spontaneous pneumothorax in a pilot - A case report p 395 A86-44093

POLYMER CHEMISTRY
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960

PORPHYRINS
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421

PORTABLE EQUIPMENT
Specifications Physiological Monitoring System [NASA-CR-171926] p 408 N86-30339

POSITION (LOCATION)
Spatiotemporal characteristics of visual localization [AD-A166097] p 404 N86-30331

POTABLE WATER
Development of thermoelectric water heating-cooling devices [AD-A166949] p 409 N86-31221
Defining reclaimed water potability requirements p 410 N86-31422

PREDICTIONS
The use of ECG changes caused by acceleration as tolerance predicition factors p 399 N86-30316

PRESSURE BREATHING
Assisted positive pressure breathing and modified anti-acceleration suit filling tested up to 9 G in a human centrifuge, Karolinska Institute [FOA-C-50038-H1] p 408 N86-30341

PRESSURE CHAMBERS
An environmentally-controlled extended-use small animal hypobaric chamber [AD-A166729] p 398 N86-30307

PRESSURE SUITS
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779
Assisted positive pressure breathing and modified anti-acceleration suit filling tested up to 9 G in a human centrifuge, Karolinska Institute [FOA-C-50038-H1] p 408 N86-30341

PRIVACY
Implications of privacy needs and interpersonal distancing mechanisms for space station design [NASA-CR-176938] p 408 N86-30338

PROBABILITY THEORY
Impact of the human on system safety analysis [DE86-008182] p 409 N86-31224

PROBLEM SOLVING
Representation for closed form significance testing in VL1 p 408 N86-31219
A discrete control model of PLANT p 408 N86-31220

PROGENY
Biological studies of swine exposed to 60-Hz electric fields. Volume 5: Hematology and serum chemistry [DE86-005362] p 411 N86-30344

PROPHYLAXIS
Theoretical principles underlying the evaluation, control, and correction of the impact of emotions on cosmonaut activity p 403 A86-44601

PROSTAGLANDINS
The possible involvement of PGI2 in the PEEP-induced changes in cardiac output and blood pressure p 395 A86-44091

PROTEIN SYNTHESIS
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960

PSYCHOLOGICAL EFFECTS
Aircrew aspects of United Stated future fighter aircraft p 398 N86-30310

PSYCHOLOGICAL TESTS
Canadian forces approach to aircrew medical selection p 399 N86-30311
Attention tasks and their relation to aging and flight experience [IZF-1986-4] p 405 N86-30337

PSYCHOPHYSICS
Spatiotemporal characteristics of visual localization [AD-A166097] p 404 N86-30331
Novel architectures for image processing based on computer simulation and psychophysical studies of human visual cortex [AD-A166222] p 404 N86-30333
Sensitivity to visual motion in statistically defined displays [AD-A167291] p 405 N86-31217

PSYCHOPHYSIOLOGY
Theoretical principles underlying the evaluation, control, and correction of the impact of emotions on cosmonaut activity p 403 A86-44601

PULMONARY FUNCTIONS
Treadmill spiroergometry in the selection and screening of high-performance combat aircraft pilots in the Belgian Air Force p 401 N86-30325
Relationship of cardiopulmonary fitness to flight performance in tactical aviation p 401 N86-30326

PULMONARY LESIONS
Diffuse pulmonary ossification and spontaneous pneumothorax in a pilot - A case report p 395 A86-44093

R

RABBITS
Intrinsic alteration of the reactive properties of arteries during hypothermia [AD-A166523] p 402 N86-31213

RADIATION DAMAGE
The photobiological aspects of radiation damage in cells --- Russian book p 392 A86-44295

RADIATION DOSAGE
Radiofrequencies and microwaves - Radiation safety of the operator p 397 A86-46270
Bacterial inactivation by means of ionizing radiation [DE86-901038] p 412 N86-30348
Cytogenetic analyses of peripheral lymphocytes subjected to simulated solar flare radiation p 412 N86-31431

RADIATION TOLERANCE
Radiofrequencies and microwaves - Radiation safety of the operator p 397 A86-46270

RADIO FREQUENCIES
Radiofrequencies and microwaves - Radiation safety of the operator p 397 A86-46270

RADIO WAVES
Assessing possible damage due to radio frequency radiation [AD-A166913] p 402 N86-31214

RADIOBIOLOGY
The photobiological aspects of radiation damage in cells --- Russian book p 392 A86-44295

RADIOGRAPHY
Systematic radiographic examination of the spine for selection of F-16 pilots: A preliminary report p 401 N86-30323

RARE GASES
How well mixed is inert gas in tissues? p 391 A86-44197

RATS
The temporal response of bone to unloading [NASA-TM-89228] p 397 N86-30303
Multiparameter data acquisition systems for studies of Circadian rhythms [DE86-004041] p 398 N86-30308

REACTION KINETICS
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209
REACTION TIME
Vision test battery threshold and response time as predictors of air-to-air visual target acquisition in F-14 and adversary aircraft p 400 N86-30321
REDUCED GRAVITY
Effects of simulated weightlessness on meiosis, Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342
REGRESSION ANALYSIS
Effects of 60 Hz electric field on operant and social stress behaviors of nonhuman primates
[DE85-016121] p 411 N86-30346
RELIABILITY ANALYSIS
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224
RESEARCH
Cognitive aspects of command and control
[IZF-1986-2] p 405 N86-30336
RESEARCH MANAGEMENT
Life Sciences Space Station planning document: A reference payload for the Life Sciences Research Facility
[NASA-TM-89188] p 393 N86-30302
RESPIRATORY DISEASES
Diffuse pulmonary ossification and spontaneous pneumothorax in a pilot - A case report
p 395 A86-44093
The significance of recurrent childhood respiratory disorders in flight training applicants p 395 A86-44095
RESPIRATORY PHYSIOLOGY
The possible involvement of PGI2 in the PEEP-induced changes in cardiac output and blood pressure
p 395 A86-44091
Solute conductance of blood-gas barrier in hamsters exposed to hyperoxia p 391 A86-44195
The suppressive effect of carbon dioxide on the activation of cold receptors in the nasal cavity of cats
p 392 A86-45319
Correlations between the levels of cerebral blood flow and cerebrovascular reactivity and the functional state of brain tissue p 392 A86-45320
RESPIRATORY RATE
The effect of breathing elevated CO2 gas mixtures on tracking performance, blood pressure, and subjective tolerance at 1Gz
[AD-A165974] p 401 N86-31210
RISK
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224
ROBOTICS
Advanced operator/system interface concepts for the Space Station
[AIAA PAPER 86-2317] p 407 A86-46945
Evaluating space station applications of automation and robotics technologies from a human productivity point of view p 409 N86-31412

S

SAFETY
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224
SAFETY DEVICES
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779
SAFETY MANAGEMENT
Radiofrequencies and microwaves - Radiation safety of the operator p 397 A86-46270
SEAMOUNTS
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421
SELF ORGANIZING SYSTEMS
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216
SEMICIRCULAR CANALS
Single sinusoids compared with a multiple-sinusoids technique for evaluating horizontal semicircular canal function p 395 A86-44089
SENSORIMOTOR PERFORMANCE
Inhibitory effects of combined agonist and antagonist muscle vibration on H-reflex in man p 395 A86-44090
SERVICE MODULES
Zero-G simulation verifies EVA servicing of space station modules
[AIAA PAPER 86-2312] p 407 A86-46942
SHAPES
Novel architectures for image processing based on computer simulation and psychophysical studies of human visual cortex
[AD-A166222] p 404 N86-30333
SIGNAL ANALYSIS
The inverse problem in electrocardiography - A model study of the effects of geometry and conductivity parameters on the reconstruction of epicardial potentials
p 394 A86-43750
SIMULATION
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332
SKIN TEMPERATURE (BIOLOGY)
Thermoregulation after atropine and pralidoxime administration
[AD-A165868] p 397 N86-30304
SOCIAL FACTORS
Implications of privacy needs and interpersonal distancing mechanisms for space station design
[NASA-CR-176938] p 408 N86-30338
SOCIAL ISOLATION
Implications of privacy needs and interpersonal distancing mechanisms for space station design
[NASA-CR-176938] p 408 N86-30338
SOFTWARE ENGINEERING
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218
SOLAR FLARES
Cytogenetic analyses of peripheral lymphocytes subjected to simulated solar flare radiation
p 412 N86-31431
SOLAR PROTONS
Cytogenetic analyses of peripheral lymphocytes subjected to simulated solar flare radiation
p 412 N86-31431
SOLUTES
Solute conductance of blood-gas barrier in hamsters exposed to hyperoxia p 391 A86-44195
SPACE ADAPTATION SYNDROME
Analysis of nystagmus response to a pseudorandom velocity input p 402 N86-31426
Flow cytometry analysis of hormone receptors on human peripheral blood mononuclear cells to identify stress-induced neuroendocrine effects
p 403 N86-31428
Selection of an appropriate animal model for study of bone loss in weightlessness p 412 N86-31436
SPACE EXPLORATION
The question of life on Mars p 410 A86-43927
SPACE MAINTENANCE
Advanced space suit development for future on-orbit operations
[AIAA PAPER 86-2310] p 407 A86-46941
Zero-G simulation verifies EVA servicing of space station modules
[AIAA PAPER 86-2312] p 407 A86-46942
SPACE PERCEPTION
Spatiotemporal characteristics of visual localization
[AD-A166097] p 404 N86-30331
Sensitivity to visual motion in statistically defined displays
[AD-A167291] p 405 N86-31217
SPACE PSYCHOLOGY
Theoretical principles underlying the evaluation, control, and correction of the impact of emotions on cosmonaut activity p 403 A86-44601
Implications of privacy needs and interpersonal distancing mechanisms for space station design
[NASA-CR-176938] p 408 N86-30338
SPACE SHUTTLE PAYLOADS
Life Sciences Space Station planning document: A reference payload for the Life Sciences Research Facility
[NASA-TM-89188] p 393 N86-30302
SPACE STATIONS
Intelligent crew workstations p 406 A86-44532
Environmental control/life support system for Space Station p 407 A86-45692
An updated model for a Space Station Health Maintenance Facility
[AIAA PAPER 86-2303] p 397 A86-46938
Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943
Impact of automation on Space Station MMI design --- Man-Machine Interface
[AIAA PAPER 86-2316] p 407 A86-46944
Advanced operator/system interface concepts for the Space Station
[AIAA PAPER 86-2317] p 407 A86-46945
Space Station - Life sciences
[AIAA PAPER 86-2346] p 393 A86-46960
Life Sciences Space Station planning document: A reference payload for the Life Sciences Research Facility
[NASA-TM-89188] p 393 N86-30302
Evaluating space station applications of automation and robotics technologies from a human productivity point of view p 409 N86-31412
Cytogenetic analyses of peripheral lymphocytes subjected to simulated solar flare radiation
p 412 N86-31431
SPACE SUITS
Advanced space suit development for future on-orbit operations
[AIAA PAPER 86-2310] p 407 A86-46941
SPACEBORNE EXPERIMENTS
Space Station - Life sciences
[AIAA PAPER 86-2346] p 393 A86-46960
SPACECRAFT CABIN ATMOSPHERES
Environmental control and life support systems
p 406 A86-44534
SPACECRAFT DESIGN
Environmental control and life support systems
p 406 A86-44534
Environmental control/life support system for Space Station p 407 A86-45692
Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943
Impact of automation on Space Station MMI design --- Man-Machine Interface
[AIAA PAPER 86-2316] p 407 A86-46944
SPACECRAFT ENVIRONMENTS
Environmental control and life support systems
p 406 A86-44534
Environmental control/life support system for Space Station p 407 A86-45692
SPACECREWS
Specifications Physiological Monitoring System
[NASA-CR-171926] p 408 N86-30339
Cytogenetic analyses of peripheral lymphocytes subjected to simulated solar flare radiation
p 412 N86-31431
SPECIFICATIONS
Defining reclaimed water potability requirements
p 410 N86-31422
SPECTRAL SENSITIVITY
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329
STANDARDS
Canadian forces approach to aircrew medical selection p 399 N86-30311
Cardiovascular standards for selection and retention of high performance pilots in the USAF: Perspectives for the next decade p 399 N86-30313
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
STATISTICAL DISTRIBUTIONS
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209
STERILIZATION
Bacterial inactivation by means of ionizing radiation
[DE86-901038] p 412 N86-30348
STOCHASTIC PROCESSES
Experimental estimate of the parameters of a stochastic model of a human operator sensor system
p 407 A86-45117
STRESS (PHYSIOLOGY)
Changes in pericardial microcirculation in dogs during adaptation to static muscle loads p 392 A86-45321
Human vascular fluid responses to cold stress are not altered by cold acclimation
[AD-A165869] p 398 N86-30305
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-005807] p 411 N86-30347
Metabolic changes following eccentric exercise in trained and untrained men
[AD-A166521] p 402 N86-31211
STRESS (PSYCHOLOGY)
Review on secondary task technique for workload assessment Some consideration of secondary task paradigms and an assessment model
p 403 A86-43539
The contractile function and the energy metabolism of the myocardium under emotional stress and during adaptation of animals to short stress effects
p 392 A86-45322
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-005807] p 411 N86-30347

STROBOSCOPES
Sensitivity to visual motion in statistically defined displays
[AD-A167291] p 405 N86-31217
SUBMARINES
Calcium and vitamin D metabolism in submariners: Carbon dioxide, sunlight and absorption considerations
[AD-A166292] p 398 N86-30306
SUNLIGHT
Calcium and vitamin D metabolism in submariners: Carbon dioxide, sunlight and absorption considerations
[AD-A166292] p 398 N86-30306
SUSPENDING (HANGING)
Models of disuse - A comparison of hindlimb suspension and immobilization p 391 A86-44196
SWINE
Biological studies of swine exposed to 60-Hz electric fields. Volume 5: Hematology and serum chemistry
[DE86-005362] p 411 N86-30344
SYNTAX
Representation for closed form significance testing in VL1 p 408 N86-31219
SYSTEM FAILURES
Detection of system failure by human operator. I - The case of monitor p 403 A86-43535
SYSTEMS ANALYSIS
Basic human factors considerations
[DE86-008181] p 409 N86-31223
SYSTOLE
Circadian variations of systolic time intervals p 394 A86-44087

T

TARGET RECOGNITION
Visual accommodation and virtual image displays - Target detection and recognition p 406 A86-45015
TARGETS
Preferred declination of the line of sight p 406 A86-45014
The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334
TASK COMPLEXITY
Detection of system failure by human operator. I - The case of monitor p 403 A86-43535
Review on secondary task technique for workload assessment Some consideration of secondary task paradigms and an assessment model p 403 A86-43539
Visual accommodation and virtual image displays - Target detection and recognition p 406 A86-45015
TASKS
Visual capabilities related to fighter aircrew performance in the F-14 and adversary aircraft p 400 N86-30320
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332
Basic human factors considerations
[DE86-008181] p 409 N86-31223
Process of task analysis
[DE86-008183] p 409 N86-31225
TECHNOLOGY ASSESSMENT
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779
TELEOPERATORS
Human factors activities in teleoperator development at the Oak Ridge National Laboratory
[DE86-005160] p 408 N86-30340
TEMPERATURE EFFECTS
The effect of high temperature on the heat exchange and the nutritional status of pilots p 397 A86-45325
TEST CHAMBERS
Hypobaric training of flight personnel without compromising quality of life p 401 N86-30327
THERMOELECTRIC COOLING
Development of thermoelectric water heating-cooling devices
[AD-A166949] p 409 N86-31221
THERMORECEPTORS
The suppressive effect of carbon dioxide on the activation of cold receptors in the nasal cavity of cats p 392 A86-45319
THERMOREGULATION
Thermoregulation after atropine and pralidoxime administration
[AD-A165868] p 397 N86-30304
TISSUES (BIOLOGY)
How well mixed is inert gas in tissues? p 391 A86-44197
TOLERANCES (PHYSIOLOGY)
Human vascular fluid responses to cold stress are not altered by cold acclimation
[AD-A165869] p 398 N86-30305
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
TOXICOLOGY
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208
TRACKING (POSITION)
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319
TRAINING EVALUATION
Physical training of Mirage 2000 pilots p 401 N86-30324
TRANSMISSION LOSS
Methods of measuring the attenuation of hearing protection devices p 406 A86-45073

U

ULTRAVIOLET ABSORPTION
Calcium and vitamin D metabolism in submariners: Carbon dioxide, sunlight and absorption considerations
[AD-A166292] p 398 N86-30306
UNCONSCIOUSNESS
G-induced loss of consciousness - Combat aircraft pilots head for trouble p 396 A86-44814
USER REQUIREMENTS
Making the human-machine interface responsive to many classes of users
[DE86-003453] p 409 N86-31222

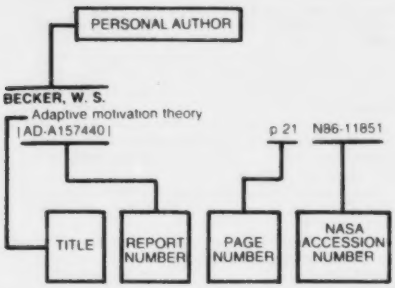
V

VACUUM CHAMBERS
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
VAPOR PHASES
Laser kinetic spectroscopy of unimolecular and bimolecular processes in the gas phase
[AD-A166998] p 394 N86-31209
VASCULAR SYSTEM
Correlations between the levels of cerebral blood flow and cerebrovascular reactivity and the functional state of brain tissue p 392 A86-45320
VASOCONSTRICTION
Intrinsic alteration of the reactive properties of arteries during hypothermia
[AD-A166523] p 402 N86-31213
VENTILATION
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
VERTEBRAL COLUMN
The vertebral column: Selection and aptitude of combat aircraft pilots of the future p 400 N86-30322
Systematic radiographic examination of the spine for selection of F-16 pilots: A preliminary report p 401 N86-30323
VESTIBULAR NYSTAGMUS
Analysis of nystagmus response to a pseudorandom velocity input p 402 N86-31426
VIABILITY
The viability with respect to temperature, of micro-organisms incident on the earth's atmosphere p 410 A86-44358
VIBRATION EFFECTS
Inhibitory effects of combined agonist and antagonist muscle vibration on H-reflex in man p 395 A86-44090
VIKING LANDER SPACECRAFT
The question of life on Mars p 410 A86-43927
VISIBLE SPECTRUM
The photobiological aspects of radiation damage in cells --- Russian book p 392 A86-44295
VISION
Spatiotemporal characteristics of visual localization
[AD-A166097] p 404 N86-30331
VISUAL ACCOMMODATION
Visual accommodation and virtual image displays - Target detection and recognition p 406 A86-45015
VISUAL ACUITY
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329
VISUAL AIDS
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
VISUAL DISCRIMINATION
Preferred declination of the line of sight p 406 A86-45014
Enhanced detection in the aperture of focal attention during simple discrimination tasks p 403 A86-45955
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
VISUAL FIELDS
Enhanced detection in the aperture of focal attention during simple discrimination tasks p 403 A86-45955
VISUAL PERCEPTION
Medical Selection and Physiological Training of Future Fighter Aircrew
[AGARD-CP-396] p 398 N86-30309
Computer analysis of visual and vestibular oculomotor function in the medical selection of fighter aircrew members p 400 N86-30319
Visual capabilities related to fighter aircrew performance in the F-14 and adversary aircraft p 400 N86-30320
Vision test battery threshold and response time as predictors of air-to-air visual target acquisition in F-14 and adversary aircraft p 400 N86-30321
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329
The importance of specialized cognitive function in the selection of military pilots
[AD-A165889] p 404 N86-30330
Novel architectures for image processing based on computer simulation and psychophysical studies of human visual cortex
[AD-A166222] p 404 N86-30333
VISUAL STIMULI
Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328
VISUAL TASKS
Preferred declination of the line of sight p 406 A86-45014
Enhanced detection in the aperture of focal attention during simple discrimination tasks p 403 A86-45955
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317
Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328
VOLCANOLOGY
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421

W

WATER HEATING
Development of thermoelectric water heating-cooling devices
[AD-A166949] p 409 N86-31221
WATER IMMERSION
Effect of head-out water immersion on response to exercise training p 396 A86-44194
WATER TREATMENT
Defining reclaimed water potability requirements p 410 N86-31422
WEIGHTLESSNESS
The role of gravity in producing digestive system changes p 391 A86-43677
The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303
Selection of an appropriate animal model for study of bone loss in weightlessness p 412 N86-31436
WEIGHTLESSNESS SIMULATION
Zero-G simulation verifies EVA servicing of space station modules
[AIAA PAPER 86-2312] p 407 A86-46942
WORK CAPACITY
Changes in pericardial microcirculation in dogs during adaptation to static muscle loads p 392 A86-45321
The effect of high temperature on the heat exchange and the nutritional status of pilots p 397 A86-45325
WORKLOADS (PSYCHOPHYSIOLOGY)
Review on secondary task technique for workload assessment Some consideration of secondary task paradigms and an assessment model p 403 A86-43539
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332
Basic human factors considerations
[DE86-008181] p 409 N86-31223

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ACEVEDO, O. L.
Template-directed oligonucleotide ligation on hydroxylapatite p 393 A86-45960

ADELMAN, B.
The question of life on Mars p 410 A86-43927

AL-MUFTI, S.
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354
The viability with respect to temperature, of micro-organisms incident on the earth's atmosphere p 410 A86-44358

ALEXANDER, K. K.
The technology impact of the Advanced Technology Crew Protection (ATCP) system on high performance aircraft p 406 A86-44779

ALLEGRINI, N.
Selection and medical testing of Mirage 2000 pilots: Report of echocardiography p 399 N86-30314

ALLEN, M. E.
Naloxone enhances motion sickness - Endorphins implicated p 395 A86-44088

ARVA, P.
Diffuse pulmonary ossification and spontaneous pneumothorax in a pilot - A case report p 395 A86-44093

ASKEW, G. K.
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329

AUFRET, R.
The vertebral column: Selection and aptitude of combat aircraft pilots of the future p 400 N86-30322

AZHAEV, A. N.
The effect of high temperature on the heat exchange and the nutritional status of pilots p 397 A86-45325

B

BACK, L. H.
Fluid dynamic study in a femoral artery branch casting of man with upstream main lumen curvature for steady flow p 397 A86-45254

BACK, M. R.
Fluid dynamic study in a femoral artery branch casting of man with upstream main lumen curvature for steady flow p 397 A86-45254

BAEV, A. V.
The suppressive effect of carbon dioxide on the activation of cold receptors in the nasal cavity of cats p 392 A86-45319

BALLDIN, U. I.
Assisted positive pressure breathing and modified anti-acceleration suit filling tested up to 9 G in a human centrifuge, Karolinska Institute
[FOA-C-50038-H1] p 408 N86-30341

BANDICK, N. R.
Intrinsic alteration of the reactive properties of arteries during hypothermia
[AD-A166523] p 402 N86-31213

BANTA, G. R.
Relationship of cardiopulmonary fitness to flight performance in tactical aviation p 401 N86-30326

BARD, J. F.
Evaluating space station applications of automation and robotics technologies from a human productivity point of view p 409 N86-31412

BARNARD, R. W.
Making the human-machine interface responsive to many classes of users
[DE86-003453] p 409 N86-31222

BARZILAY, J.
Low back pain in pilots p 395 A86-44092

BENBASSAT, J.
The significance of recurrent childhood respiratory disorders in flight training applicants p 395 A86-44095

BERGER, E. H.
Methods of measuring the attenuation of hearing protection devices p 406 A86-45073

BIKLE, D. D.
The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303

BLACKMAN, H. S.
Process of task analysis
[DE86-008183] p 409 N86-31225

BOER, L. C.
Attention tasks and their relation to aging and flight experience
[IZF-1986-4] p 405 N86-30337

BONDI, K. R.
Calcium and vitamin D metabolism in submariners: Carbon dioxide, sunlight and absorption considerations
[AD-A166292] p 398 N86-30306

BRENNAN, D. H.
Entry visual standards and ocular examination techniques for future fighter aircrew p 400 N86-30317

BRIGGS, R. P.
Vision test battery threshold and response time as predictors of air-to-air visual target acquisition in F-14 and adversary aircraft p 400 N86-30321

BRUTTIG, S. P.
Thermoregulation after atropine and pralidoxime administration
[AD-A165868] p 397 N86-30304

BULBULIAN, R.
Physical training and +Gz tolerance reevaluated p 396 A86-44096

BURBECK, C. A.
Spatiotemporal characteristics of visual localization
[AD-A166097] p 404 N86-30331

BURLATON, J. P.
Continuous ECG monitoring of Mirage 2000 pilots (comparison with Mirage 3 and F1 pilots) p 399 N86-30315

BURTON, R. R.
Simulated aerial combat maneuvering tolerance and physical conditioning - Current status p 396 A86-44097

BUTLER, K.
Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328

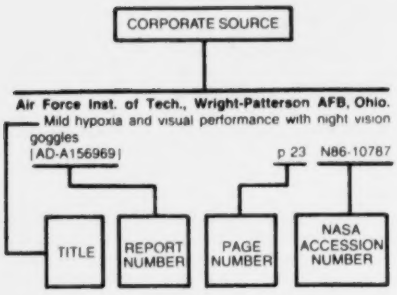
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
Medical Selection and Physiological Training of Future Fighter Aircrew
[AGARD-CP-396] p 398 N86-30309

Air Force Occupational and Environmental Health Lab., Brooks AFB, Tex.
Assessing possible damage due to radio frequency radiation
[AD-A166913] p 402 N86-31214

Air Force Wright Aeronautical Labs., Wright-Patterson AFB, Ohio.
Aircrew aspects of United Stated future fighter aircraft
p 398 N86-30310

Argonne National Lab., Ill.
Multiparameter data acquisition systems for studies of Circadian rhythms
[DE86-004041] p 398 N86-30308

Army Research Inst. of Environmental Medicine, Natick, Mass.
Thermoregulation after atropine and pralidoxime administration
[AD-A165868] p 397 N86-30304
Human vascular fluid responses to cold stress are not altered by cold acclimation
[AD-A165869] p 398 N86-30305
An environmentally-controlled extended-use small animal hypobaric chamber
[AD-A166729] p 398 N86-30307
Metabolic changes following eccentric exercise in trained and untrained men
[AD-A166521] p 402 N86-31211
Induced erythrocythemia and maximal aerobic power: An examination of modifying factors
[AD-A166522] p 402 N86-31212
Intrinsic alteration of the reactive properties of arteries during hypothermia
[AD-A166523] p 402 N86-31213

B

Belgian Air Force, Brussels.
Treadmill spiroergometry in the selection and screening of high-performance combat aircraft pilots in the Belgian Air Force p 401 N86-30325

Boeing Aerospace Co., Huntsville, Ala.
Advanced operator/system interface concepts for the Space Station
[AIAA PAPER 86-2317] p 407 A86-46945

C

California Univ., Davis.
Implications of privacy needs and interpersonal distancing mechanisms for space station design
[NASA-CR-176938] p 408 N86-30338

California Univ., Los Angeles.
Neurophysiological research supporting the investigation of adaptive network architectures
[AD-A166074] p 405 N86-31216

CEAM, Mont-de-Marsan (France).
Physical training of Mirage 2000 pilots
p 401 N86-30324

Centre d'Essais en Vol, Bretigny-sur-Orge (France).
The use of ECG changes caused by acceleration as tolerance predicition factors p 399 N86-30316

Centre d'Etudes et de Recherches de Medecine Aerospatiale, Paris (France).
Sensitivity to color contrasts and the selection of navigator personnel p 400 N86-30318

Centre Principal d'Expertises Medicales du Personnel Navigant de l'Aeronautique, Paris (France).
Selection and medical testing of Mirage 2000 pilots: Report of echocardiography p 399 N86-30314

Clarke Ambrose, Inc., Knoxville, Tenn.
Human factors activities in teleoperator development at the Oak Ridge National Laboratory
[DE86-005160] p 406 N86-30340

Columbia Univ., New York.
Effects of simulated weightlessness on meiosis. Fertilization, and early development in mice
[NASA-CR-177106] p 410 N86-30342

D

Defence and Civil Inst. of Environmental Medicine, Downsview (Ontario).
Canadian forces approach to aircrew medical selection p 399 N86-30311

E

East Carolina Univ., Greenville, N.C.
Effects of lunar soil, Zagami meteorite, and ocean ridge basalt on the excretion of itoic acid, a siderophore, and coproporphyrin by Bacillus subtilis p 412 N86-31421

Edgerton, Germeshausen and Grier, Inc., Idaho Falls, Idaho.
Basic human factors considerations
[DE86-008181] p 409 N86-31223
Impact of the human on system safety analysis
[DE86-008182] p 409 N86-31224
Process of task analysis
[DE86-008183] p 409 N86-31225
Human factors management
[DE86-008184] p 409 N86-31226

F

Foersvarets Forskingsansalt, Stockholm (Sweden).
Assisted positive pressure breathing and modified anti-acceleration suit filling tested up to 9 G in a human centrifuge, Karolinska Institute
[FOA-C-50038-H1] p 408 N86-30341

G

Georgia Inst. of Tech., Atlanta.
Pilot interaction with automated airborne decision making systems
[NASA-CR-176986] p 408 N86-31218
Representation for closed form significance testing in VL1 p 408 N86-31219
A discrete control model of PLANT
p 408 N86-31220

Georgia Univ., Athens.
The prediction of biological activity using molecular connectivity indices
[AD-A166986] p 394 N86-31208

Graz Univ. (Austria).
Continuous blood densitometry - Fluid shifts after graded hemorrhage in animals p 392 A86-45251

H

Hopital d'Instruction des Armees, Paris (France).
The vertebral column: Selection and aptitude of combat aircraft pilots of the future p 400 N86-30322

Hopital d'Instruction des Armees, Versailles (France).
Continuous ECG monitoring of Mirage 2000 pilots (comparison with Mirage 3 and F1 pilots)
p 399 N86-30315

Houston Univ., Tex.
Selection of an appropriate animal model for study of bone loss in weightlessness p 412 N86-31436

I

Institute for Perception Research, Eindhoven (Netherlands).
Activities report in perception research
[IPO-19-1984] p 405 N86-30335

Institute for Perception RVO-TNO, Soesterberg (Netherlands).
Cognitive aspects of command and control
[IZF-1986-2] p 405 N86-30336
Attention tasks and their relation to aging and flight experience
[IZF-1986-4] p 405 N86-30337

Institute of Nuclear Energy Research, Lung-Tan (Taiwan).
Bacterial inactivation by means of ionizing radiation
[DE86-901036] p 412 N86-30348

J

Jet Propulsion Lab., California Inst. of Tech., Pasadena.
Fluid dynamic study in a femoral artery branch casting of man with upstream main lumen curvature for steady flow p 397 A86-45254

L

Life Systems, Inc., Cleveland, Ohio.
Environmental control/life support system for Space Station p 407 A86-45692

M

Marquette Univ., Milwaukee, Wis.
Models of disuse - A comparison of hindlimb suspension and immobilization p 391 A86-44196

Martin Marietta Aerospace, Denver, Colo.
Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943

Maryland Univ., Baltimore.
A possible role for endogenous glucocorticoids in orchiectomy-induced atrophy of the rat levator ani muscle: Studies with RU38486, a potent and selective antiglucocorticoid
[NASA-CR-177029] p 411 N86-30343

Midwest Research Inst., Kansas City, Mo.
Development of thermoelectric water heating-cooling devices
[AD-A166949] p 409 N86-31221

Militair Hospitaal Dr. A. Mathijsen, Utrecht (Netherlands).
Systematic radiographic examination of the spine for selection of F-16 pilots: A preliminary report
p 401 N86-30323

N

National Aeronautics and Space Administration, Washington, D.C.
Life Sciences Space Station planning document: A reference payload for the Life Sciences Research Facility
[NASA-TM-89188] p 393 N86-30302

National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
Continuous blood densitometry - Fluid shifts after graded hemorrhage in animals p 392 A86-45251

The temporal response of bone to unloading
[NASA-TM-89228] p 397 N86-30303

Division of attention as a function of the number of steps, visual shifts, and memory load
[NASA-TM-88775] p 404 N86-30328

National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
Evaluating space station applications of automation and robotics technologies from a human productivity point of view p 409 N86-31412

National Aeronautics and Space Administration. Marshall Space Flight Center, Huntsville, Ala.
Diatoms on earth, comets, Europa and in interstellar space p 410 A86-44354

Growth evolution of the Space Station ECLSS
[AIAA PAPER 86-2313] p 407 A86-46943

Naval Aerospace Medical Inst., Pensacola, Fla.
Hypobaric training of flight personnel without compromising quality of life p 401 N86-30327

Naval Aerospace Medical Research Lab., Pensacola, Fla.
Visual capabilities related to fighter aircrew performance in the F-14 and adversary aircraft p 400 N86-30320

Vision test battery threshold and response time as predictors of air-to-air visual target acquisition in F-14 and adversary aircraft p 400 N86-30321

Relationship of cardiopulmonary fitness to flight performance in tactical aviation p 401 N86-30326

Naval Air Development Center, Warminster, Pa.
The effect of spectrally selective filters on visual search performance
[AD-A165835] p 404 N86-30329

Naval Research Lab., Washington, D. C.
Advantages of the gas exchange approach to microbiological studies
[AD-A166887] p 393 N86-31207

Naval Submarine Medical Research Lab., Groton, Conn.
Calcium and vitamin D metabolism in submariners: Carbon dioxide, sunlight and absorption considerations
[AD-A166292] p 398 N86-30306

The effects of color-coding in GEOSIT (geographical situational) displays. 2: Redundant versus non-redundant color-coding
[AD-A166263] p 405 N86-30334

New York Univ. Medical Center.
Novel architectures for image processing based on computer simulation and psychophysical studies of human visual cortex
[AD-A166222] p 404 N86-30333

Northwestern Univ., Evanston, Ill.
Sensitivity to visual motion in statistically defined displays
[AD-A167291] p 405 N86-31217

Nova Technical, Inc., Tarzana, Calif.
An investigation of the use of steady-state evoked potentials for human performance and workload assessment and control
[AD-A166205] p 404 N86-30332

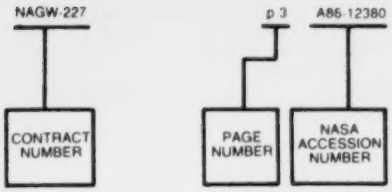
Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Offfice at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA – Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.
